Curious observations about magnets

1. A compass needle rotates when a magnet is brought close.
2. Some materials are attracted to magnets and others are not.
3. If an object is attracted to one end of a magnet, it is also attracted to the other.
4. If I cut a magnet in half, I get two magnets, each with a north and a south pole.
5. A magnet does not have the same effect on an electroscope that the charged rod did.

Geomagnetism

$$5 \times 10^{-5} \text{ T}$$

What causes magnetism

Current Loop Demo

A current creates a magnetic field

What causes magnetism

A current creates a magnetic field

A three-dimensional perspective

... but 2D pictures are easier to draw.

Right-hand rule

Question: If I know the direction of the current, how can I determine the direction of the magnetic field created by that current.

Biot-Savart Law

The SI unit of magnetic field strength is the tesla, abbreviated as T:

$$1 \text{ tesla} = 1 \text{ T} = 1 \text{ N/A m}$$

$$\vec{B}_{\text{point charge}} = \left(\frac{\mu_0}{4\pi} \frac{qv \sin \theta}{r^2}, \text{ direction given by the right-hand rule} \right)$$

The constant μ_0 in the Biot-Savart law is called the **permeability constant**:

$$\mu_0 = 4\pi \times 10^{-7} \text{ T m/A} = 1.257 \times 10^{-6} \text{ T m/A}$$

Cross Product

$$\vec{C} \times \vec{D} = (CD \sin \alpha, \text{ direction given by the right-hand rule})$$

Cross Product

$$\vec{A} = 5\hat{i} - 2\hat{j} + 3\hat{k}$$

$$\vec{B} = -3\hat{i} + 1\hat{j} - 6\hat{k}$$

$$\vec{A} \times \vec{B} =$$

A $9\hat{i} + 21\hat{j} - \hat{k}$

B $-15\hat{i} - 2\hat{j} - 18\hat{k}$

C $-9\hat{i} - 21\hat{j}$

D 42

$$\vec{B}_{\text{point charge}} = \left(\frac{\mu_0}{4\pi} \frac{qv \sin \theta}{r^2}, \text{ direction given by the right-hand rule} \right)$$

$$\vec{B} = \frac{\mu_0}{4\pi} \frac{q\vec{v} \times \hat{r}}{r^2} \quad (\text{Magnetic field of a moving point charge})$$

Let's try a harder problem

Steps:

- a) Write down \vec{v} in component form?
- b) Write down \hat{r} in component form?
- c) Find the cross product $\vec{v} \times \hat{r}$?

$$\vec{B} = \frac{\mu_0}{4\pi} \frac{q\vec{v} \times \hat{r}}{r^2}$$

$$\mu_0 = 1.257 \times 10^{-6} \text{ T m/A}$$

What is the magnetic field at the dot?

Let's try a harder problem

Steps:

- a) Write down \vec{v} in component form?
- b) Write down \hat{r} in component form?
- c) Find the cross product $\vec{v} \times \hat{r}$?

$$\vec{B} = \frac{\mu_0}{4\pi} \frac{q\vec{v} \times \hat{r}}{r^2}$$

$$\mu_0 = 1.257 \times 10^{-6} \text{ T m/A}$$

What is the magnetic field at the dot?

$$\vec{B} = 2.83 \times 10^{-16} \hat{k} \text{ T}$$

Let's try a harder problem

Steps:

- a) Write down \vec{v} in component form?
- b) Write down \hat{r} in component form?
- c) Find the cross product $\vec{v} \times \hat{r}$?

$$\vec{B} = \frac{\mu_0}{4\pi} \frac{q\vec{v} \times \hat{r}}{r^2}$$

Does adding another moving proton add to or cancel the magnetic field?

$$\mu_0 = 1.257 \times 10^{-6} \text{ T m/A}$$

What is the magnetic field at the dot?

$$\vec{B} = 2.83 \times 10^{-16} \hat{k} \text{ T}$$

Quiz Question

What is the direction of the magnetic field at the position of the dot?

- A. Into the screen.
- B. Up.
- C. Out of the screen.
- D. Down.
- E. Left.

Quiz Question

What is the direction of the magnetic field at the position of the dot?

- A. Into the screen.
- B. Up.
- C. Out of the screen.
- D. Down.
- E. Left.

Quiz Question

The magnetic field at point 2 is zero. What is the sign of the charge moving upward?

- a) positive
- b) negative

Quiz Question

Quiz Question

Magnetic Field of a Current

For moving point charge...

$$\vec{B} = \frac{\mu_0}{4\pi} \frac{q\vec{v} \times \hat{r}}{r^2}$$

Magnetic Field of a Current

For moving point charge...

$$\vec{B} = \frac{\mu_0}{4\pi} \frac{q\vec{v} \times \hat{r}}{r^2}$$

$$(\Delta Q)\vec{v} = \Delta Q \frac{\Delta \vec{s}}{\Delta t} = \frac{\Delta Q}{\Delta t} \Delta \vec{s} = I \Delta \vec{s}$$

Magnetic Field of a Current

For moving point charge...

$$\vec{B} = \frac{\mu_0}{4\pi} \frac{q\vec{v} \times \hat{r}}{r^2}$$

$$(\Delta Q)\vec{v} = \Delta Q \frac{\Delta \vec{s}}{\Delta t} = \frac{\Delta Q}{\Delta t} \Delta \vec{s} = I \Delta \vec{s}$$

$$\vec{B} = \frac{\mu_0}{4\pi} \frac{I \Delta \vec{s} \times \hat{r}}{r^2}$$

For small segment of current carrying wire.

Let's see how to do these integrals!

$$\vec{B} = \frac{\mu_0 I}{2\pi d}$$

Let's see how to do these integrals!

$$\vec{B} = \frac{\mu_0}{4\pi} \frac{I \vec{\Delta s} \times \hat{r}}{r^2}$$

$$\vec{B} = \frac{\mu_0 I}{2\pi d}$$

Let's see how to do these integrals!

$$1 \quad \hat{r} = \frac{-x\hat{i} + d\hat{j}}{\sqrt{x^2 + d^2}}$$

$$2 \quad d\vec{s} = dx\hat{i}$$

$$3 \quad d\vec{s} \times \hat{r} = \frac{ddx}{\sqrt{x^2 + d^2}}$$

$$4 \quad r^2 = x^2 + d^2$$

$$5 \quad \frac{\mu_0 I d}{4\pi} \int_{-\infty}^{\infty} \frac{dx}{(x^2 + d^2)^{3/2}}$$

$$6 \quad \frac{\mu_0 I d}{4\pi} \left| \frac{x}{d^2 \sqrt{x^2 + d^2}} \right|_{-\infty}^{\infty}$$

$$\frac{\mu_0 I}{4\pi d}$$

Let's see how to do these integrals!

$$1 \quad \hat{r} = \frac{-x\hat{i} + d\hat{j}}{\sqrt{x^2 + d^2}}$$

$$\vec{B} = \frac{\mu_0}{4\pi} \frac{I \vec{\Delta s} \times \hat{r}}{r^2}$$

$$2 \quad d\vec{s} = dx\hat{i}$$

$$3 \quad d\vec{s} \times \hat{r} = \frac{ddx}{\sqrt{x^2 + d^2}}$$

$$5 \quad \frac{\mu_0 I d}{4\pi} \int_{-\infty}^{\infty} \frac{dx}{(x^2 + d^2)^{3/2}}$$

$$4 \quad r^2 = x^2 + d^2$$

$$6 \quad \frac{\mu_0 I d}{4\pi} \left| \frac{x}{d^2 \sqrt{x^2 + d^2}} \right|_{-\infty}^{\infty}$$

$$\frac{\mu_0 I}{4\pi d}$$

Quiz Question

Compared to the magnetic field at point A, the magnetic field at point B is

- A. Half as strong, same direction.
- B. Can't compare without knowing I .
- C. One-quarter as strong, same direction.
- D. One-quarter as strong, opposite direction.
- E. Half as strong, opposite direction.

Quiz Question

A long, straight wire extends into and out of the screen.
The current in the wire is

- B. Into the screen.
- C. Not enough info to tell the direction.
- D. Out of the screen.
- E. There is no current in the wire.

Draw the net magnetic field vector at both points
