Coulomb's Law

Electric Field

Electric Potential Energy

Flux

Gauss's Law

Electric Potential

Conductors in Equilibrium

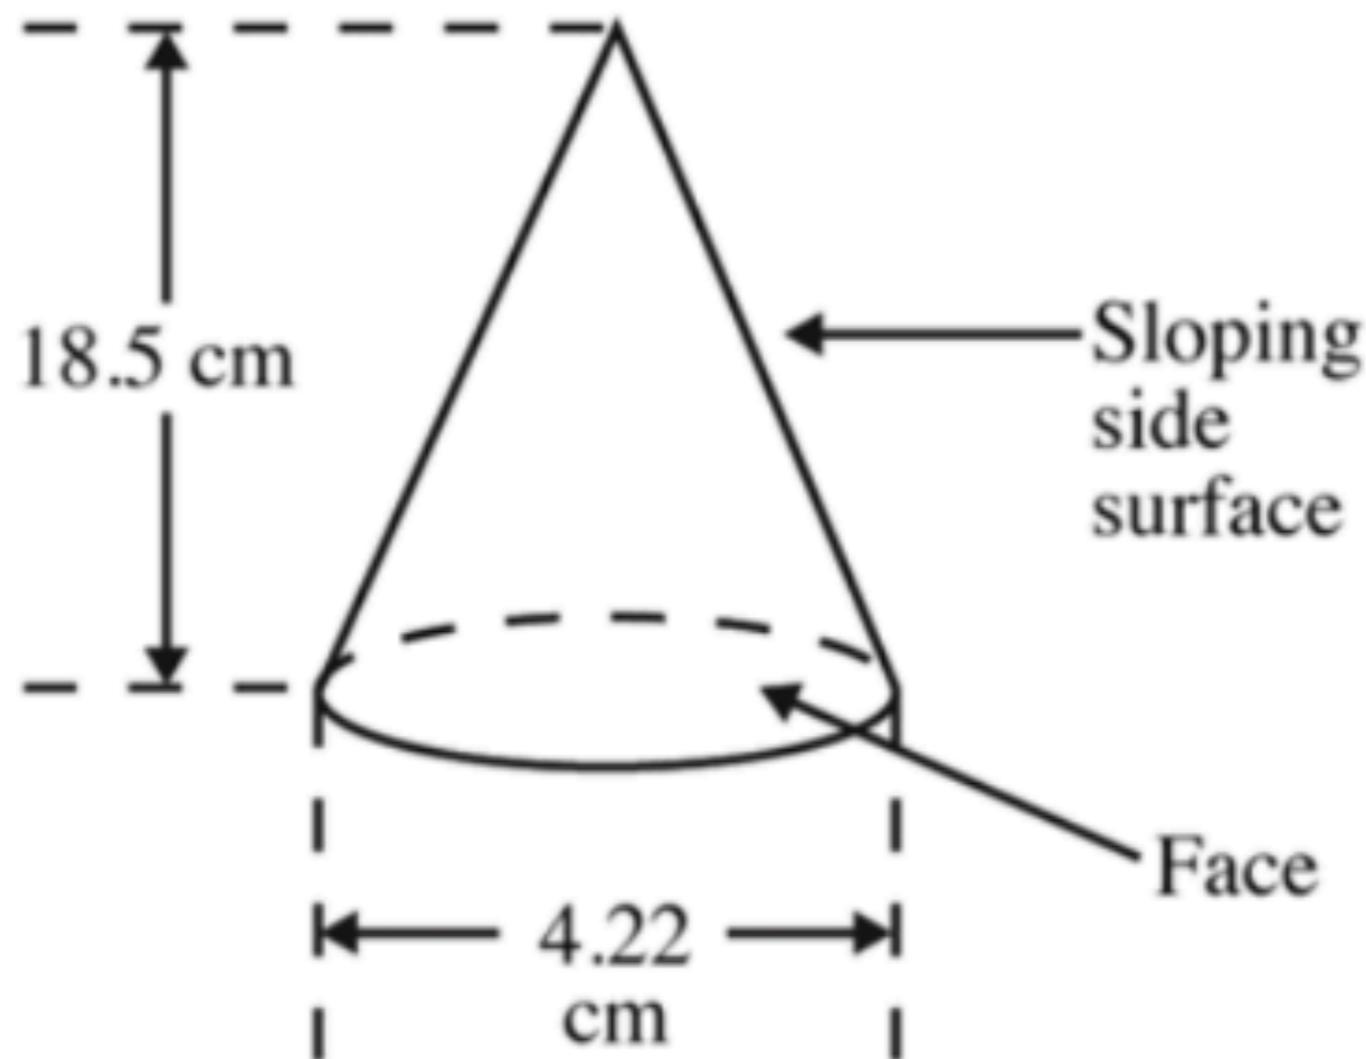

Point Charges

Continuous Charge distributions

Dipoles

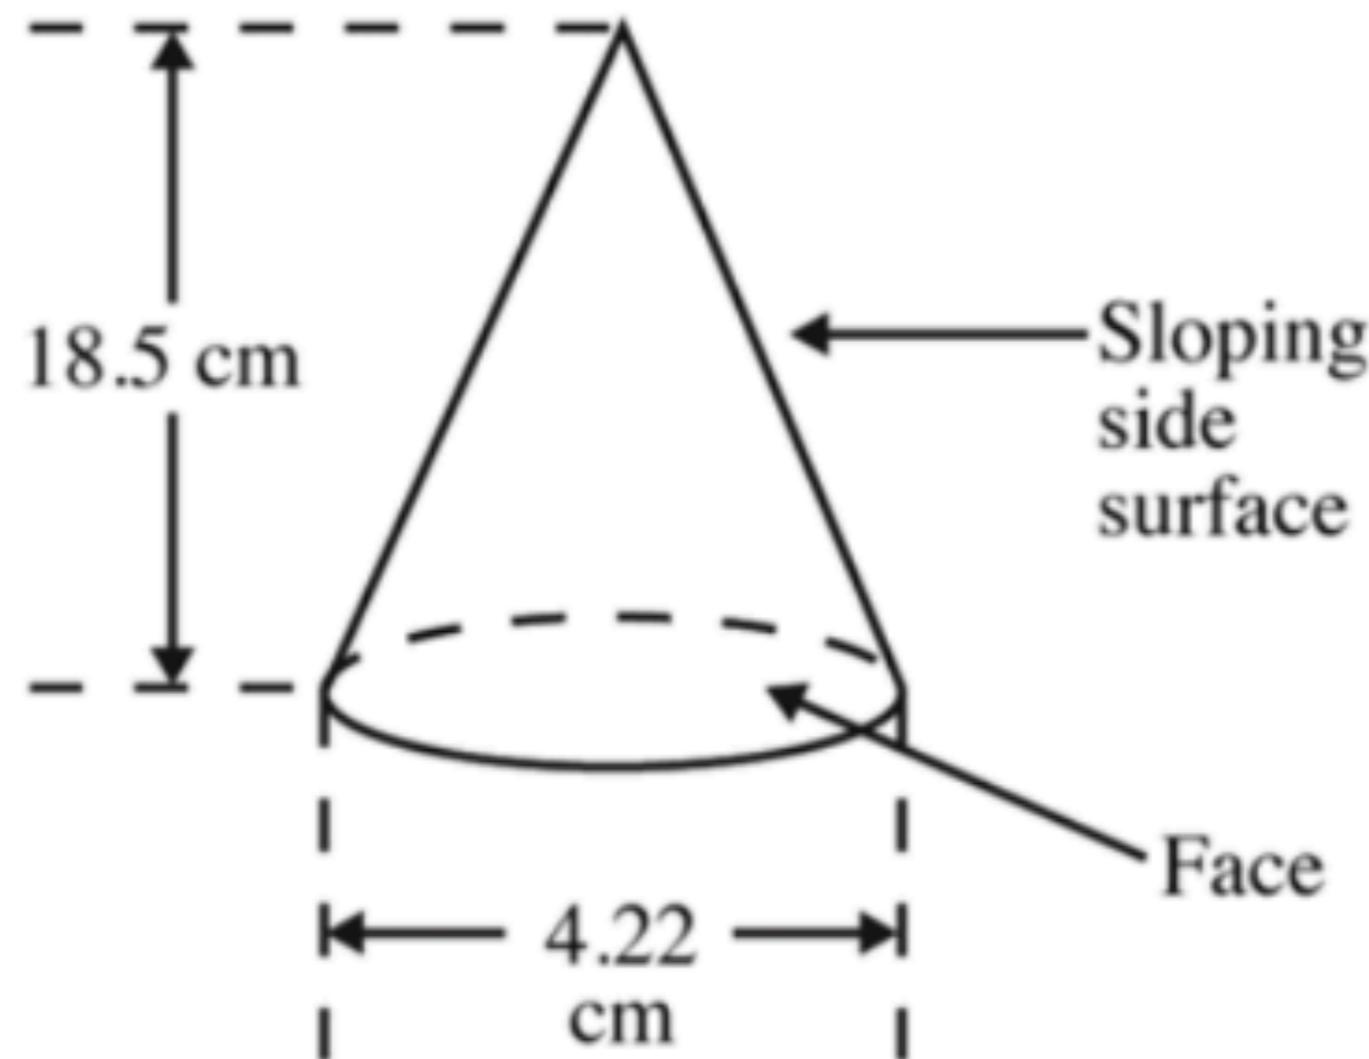

Gauss's Law

A cone is resting on a tabletop as shown in the figure with its face horizontal. A **uniform** electric field of magnitude 2,949 N/C points **vertically downward**. How much electric flux passes through the sloping side surface area of the cone?

Gauss's Law

A cone is resting on a tabletop as shown in the figure with its face horizontal. A **uniform** electric field of magnitude 2,949 N/C points **vertically downward**. How much electric flux passes through the sloping side surface area of the cone?

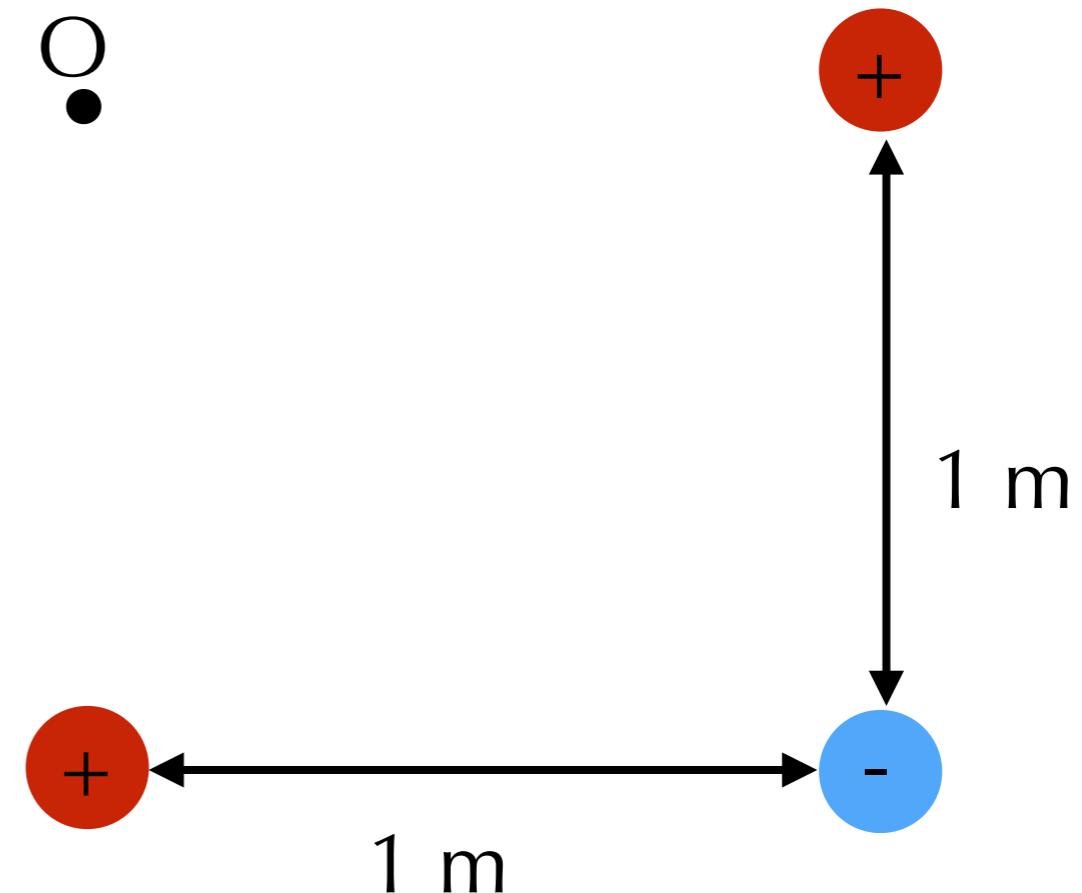

$$\int \vec{E} \cdot d\vec{A} = \frac{q_{in}}{\epsilon_0}$$

Electric Potential of Point charge

Make a sketch of the electric potential of these three point charges

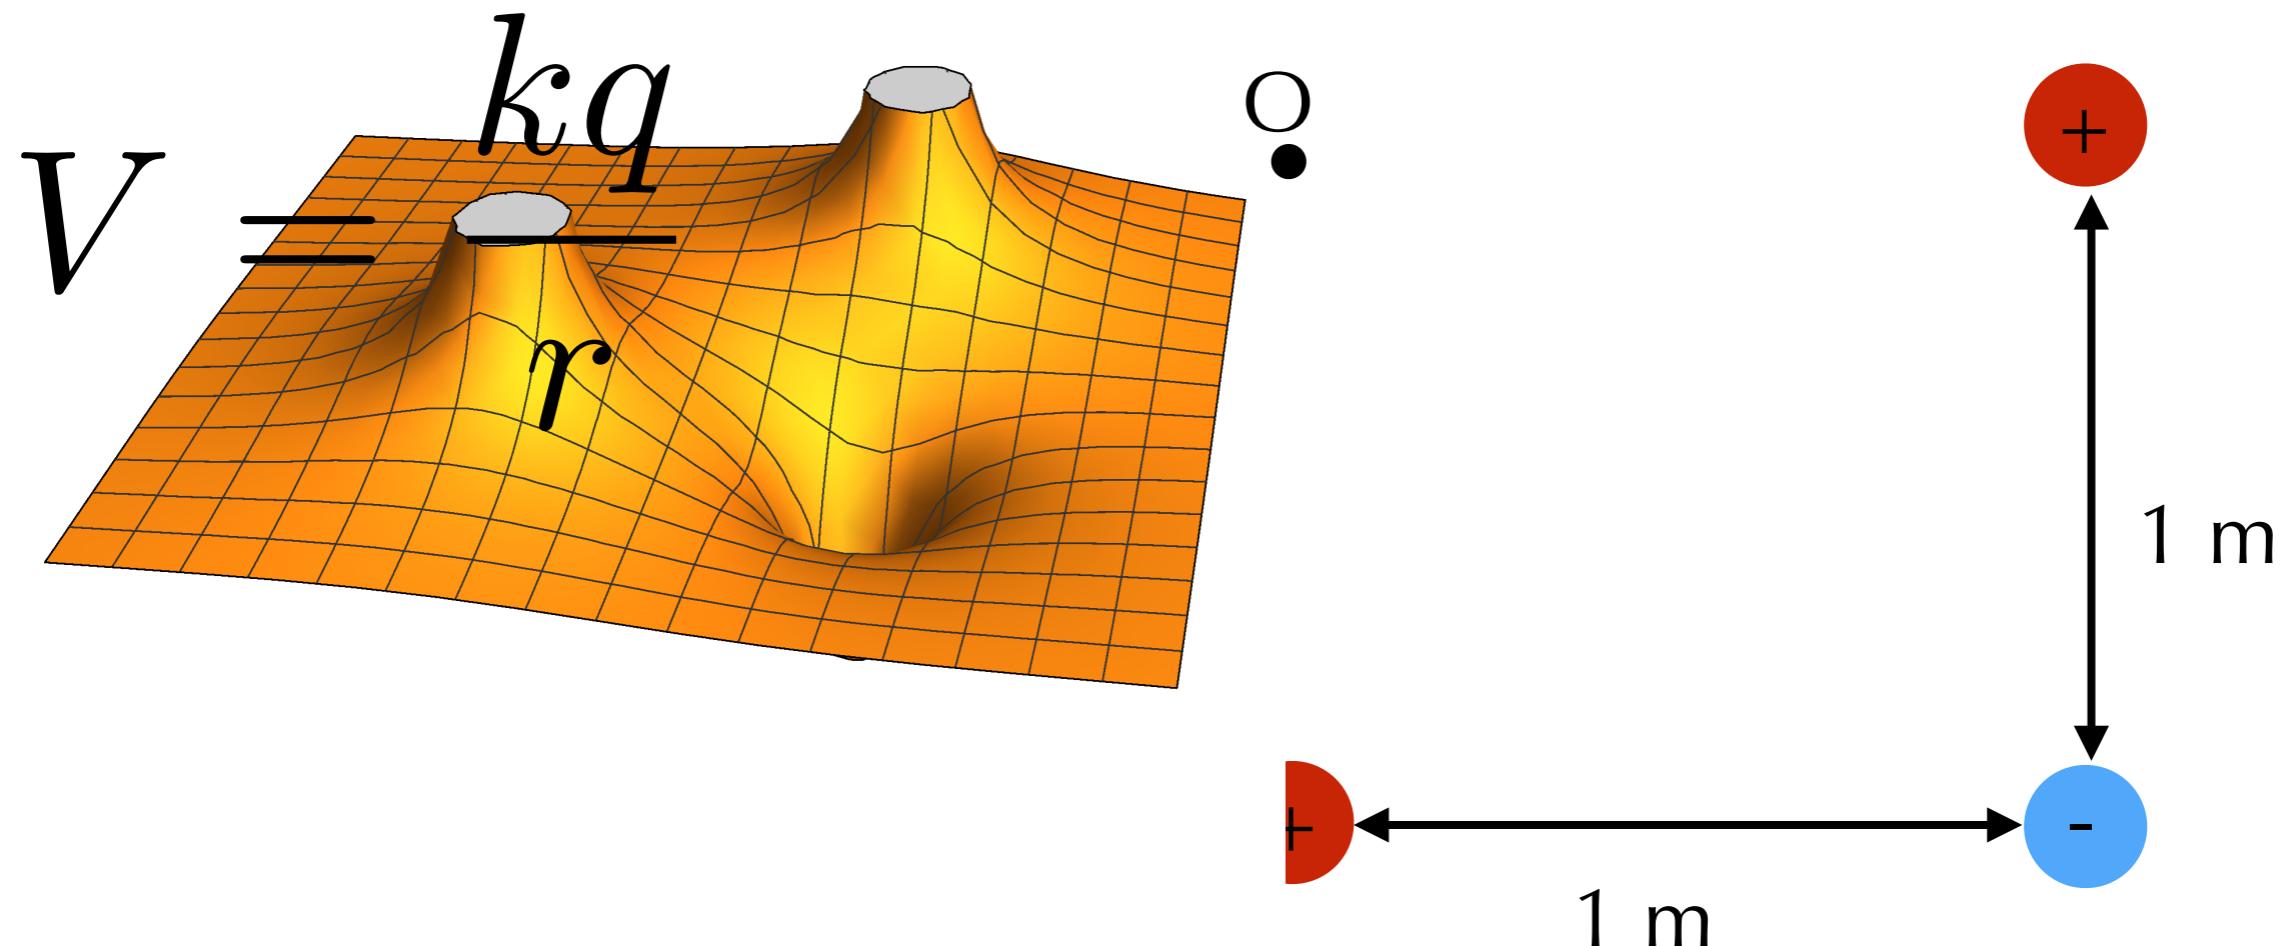

$$V_{\text{elec}} = \frac{kq_1 q_2}{x r}$$

$$V = \frac{kq}{r}$$

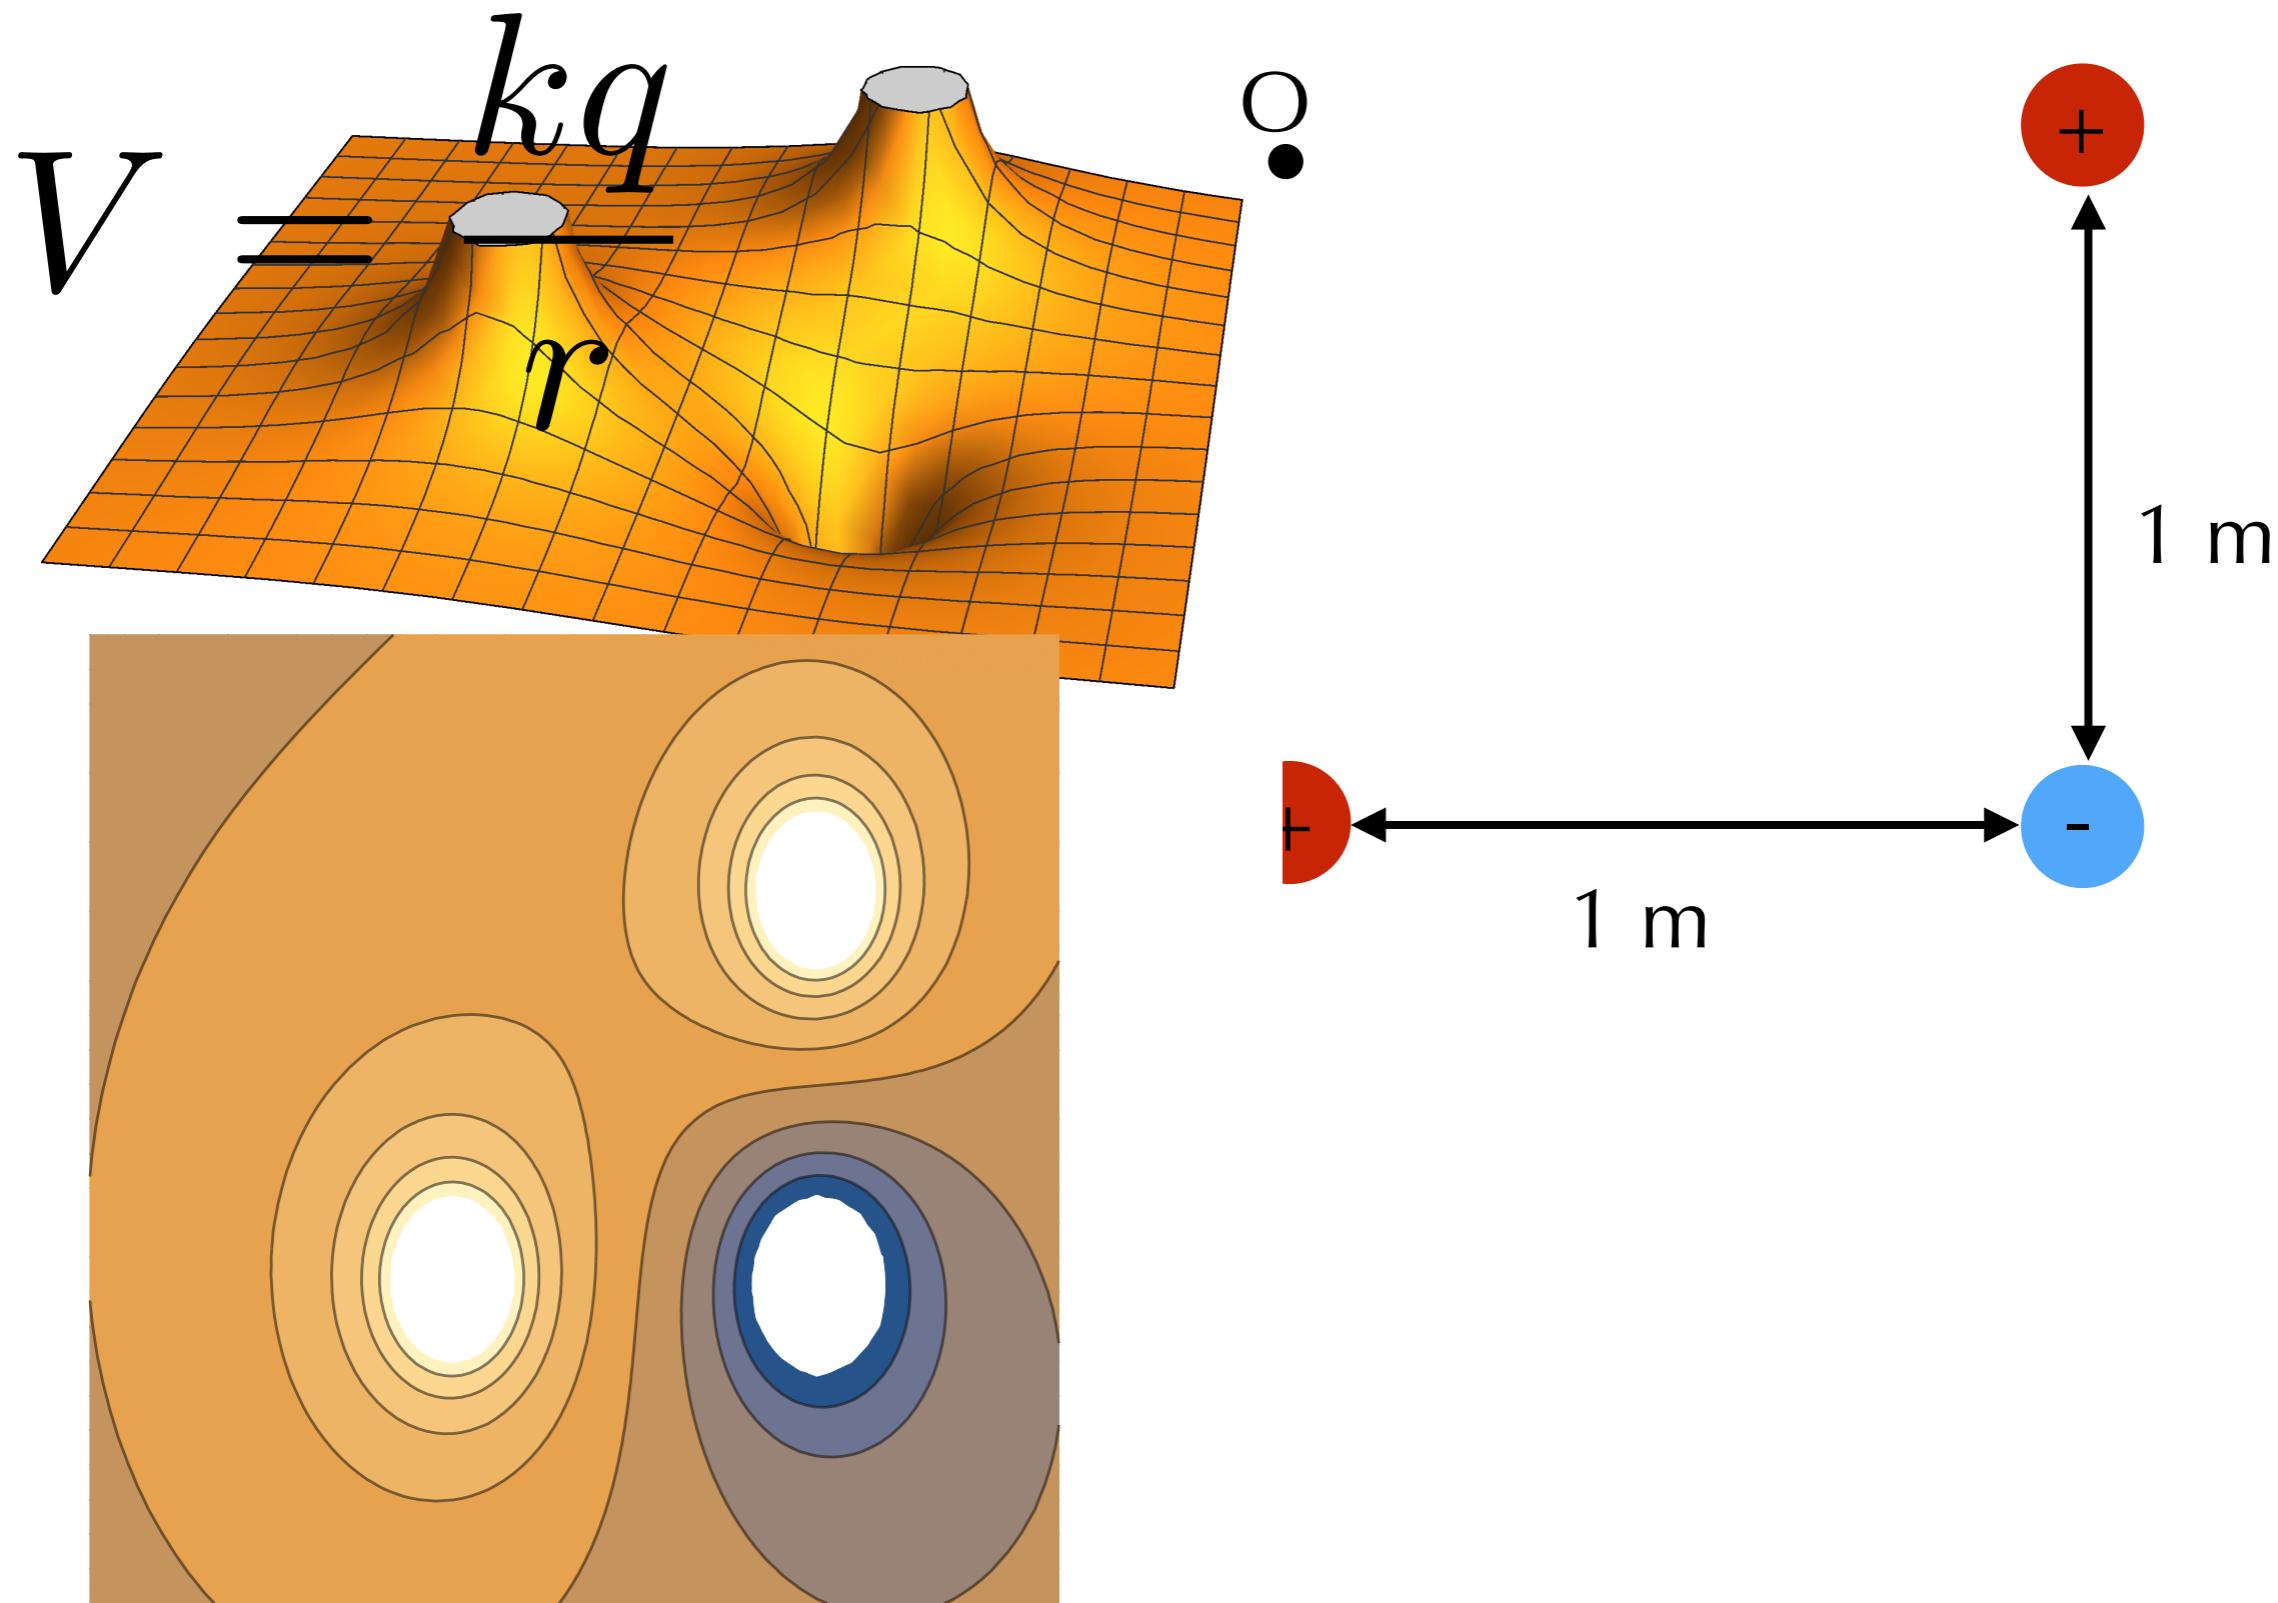

Electric Potential of Point charge

Make a sketch of the electric potential of these three point charges

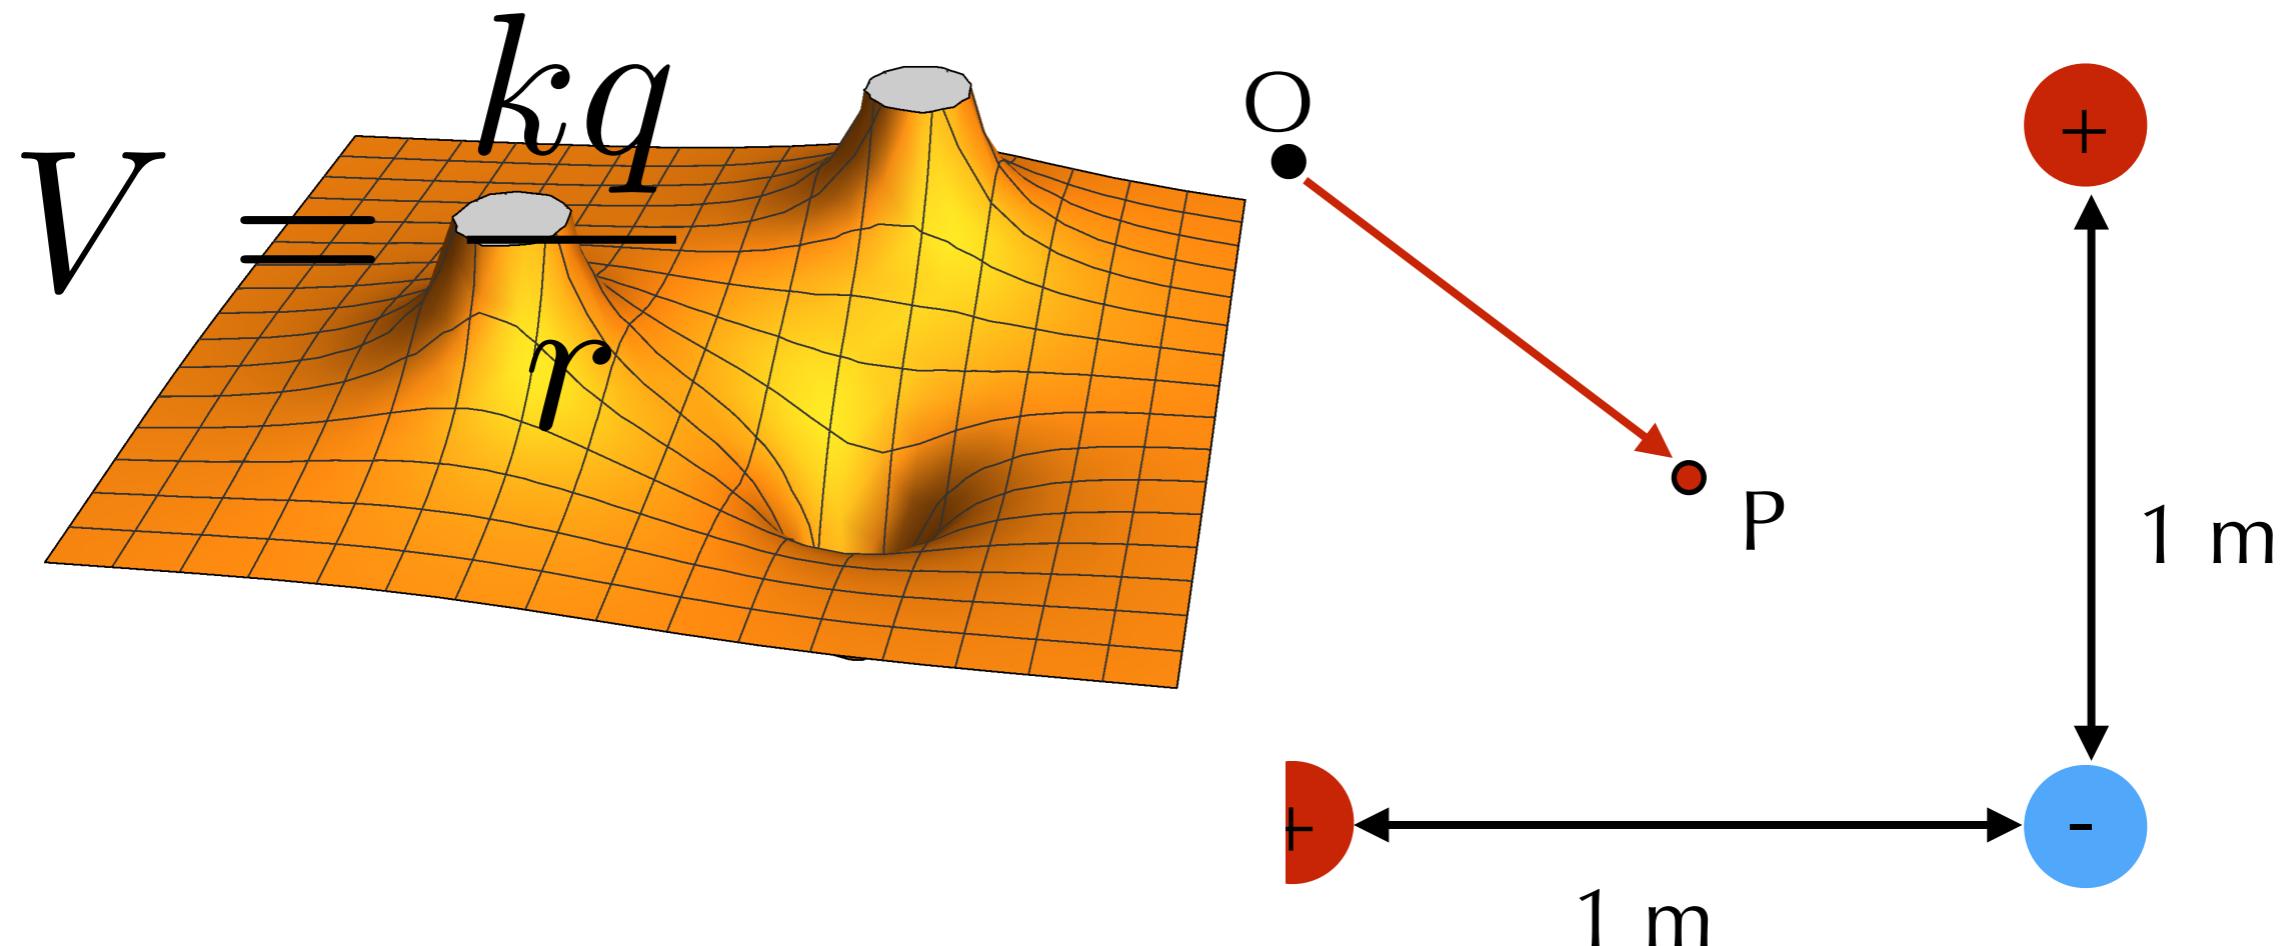

Electric Potential of Point charge

Make a sketch of the electric potential of these three point charges

Electric Potential of Point charge

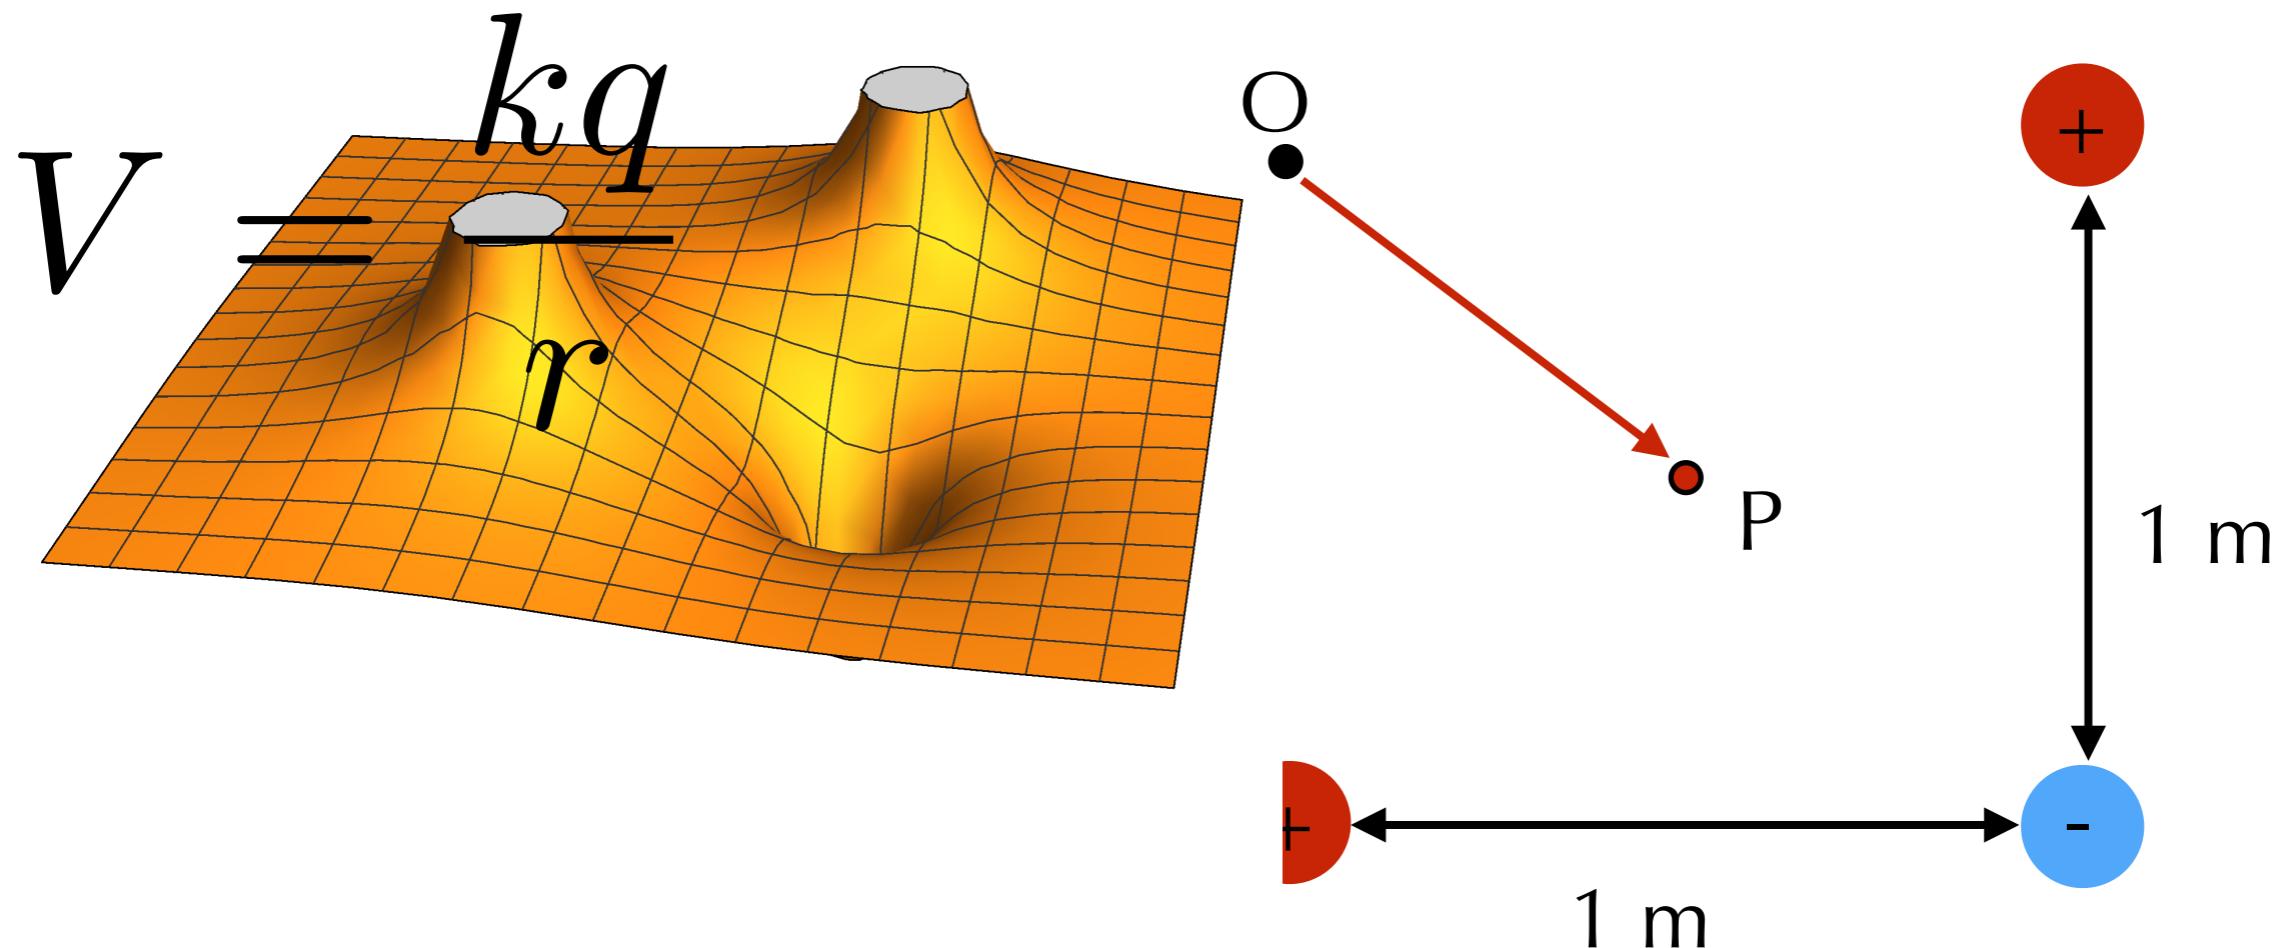

Make a sketch of the electric potential of these three point charges

Find the potential difference between point O and point P.

Electric Potential of Point charge

Make a sketch of the electric potential of these three point charges

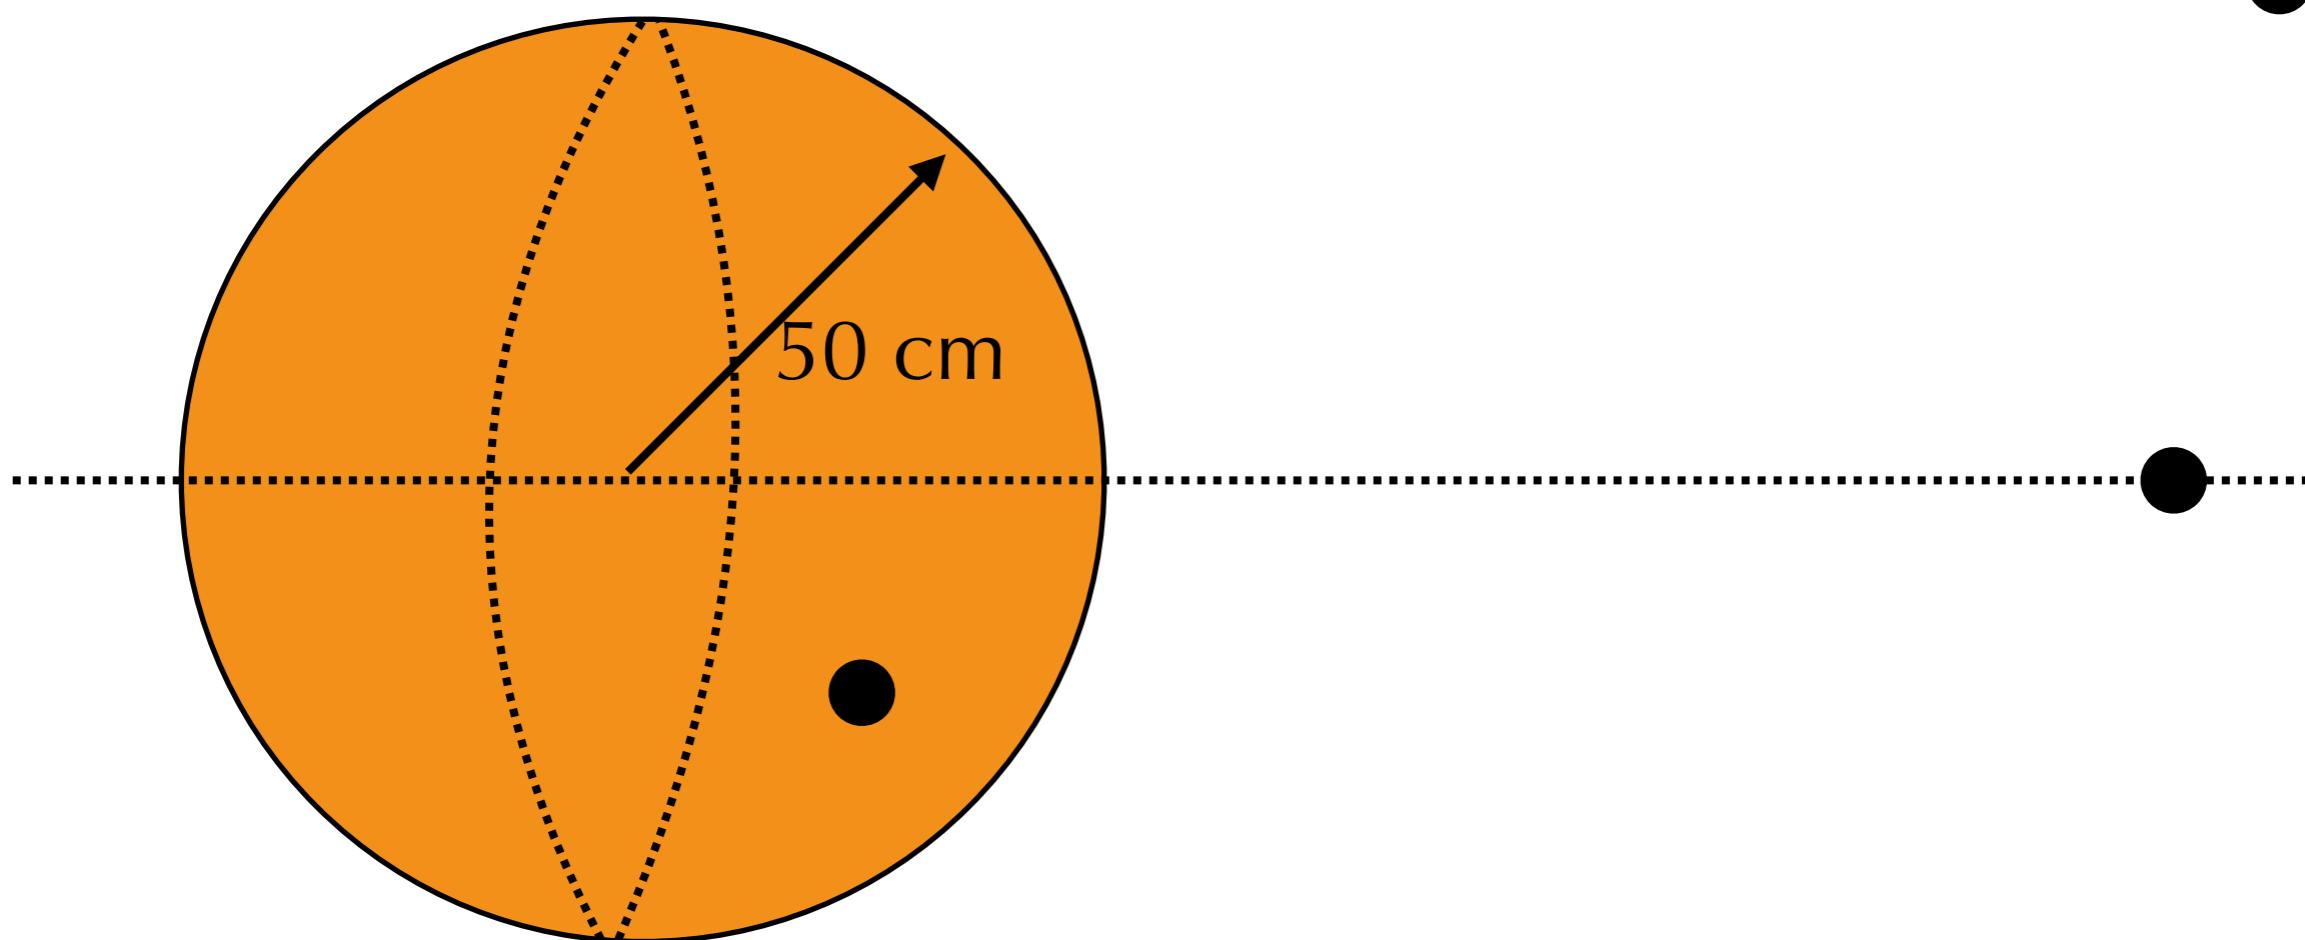

Find the potential difference between point O and point P.

If an electron is placed at O and released, how fast will it be going when it reaches point P?

Find electric field at dot.

uniformly charged sphere

$$Q = 10 \text{ nC}$$

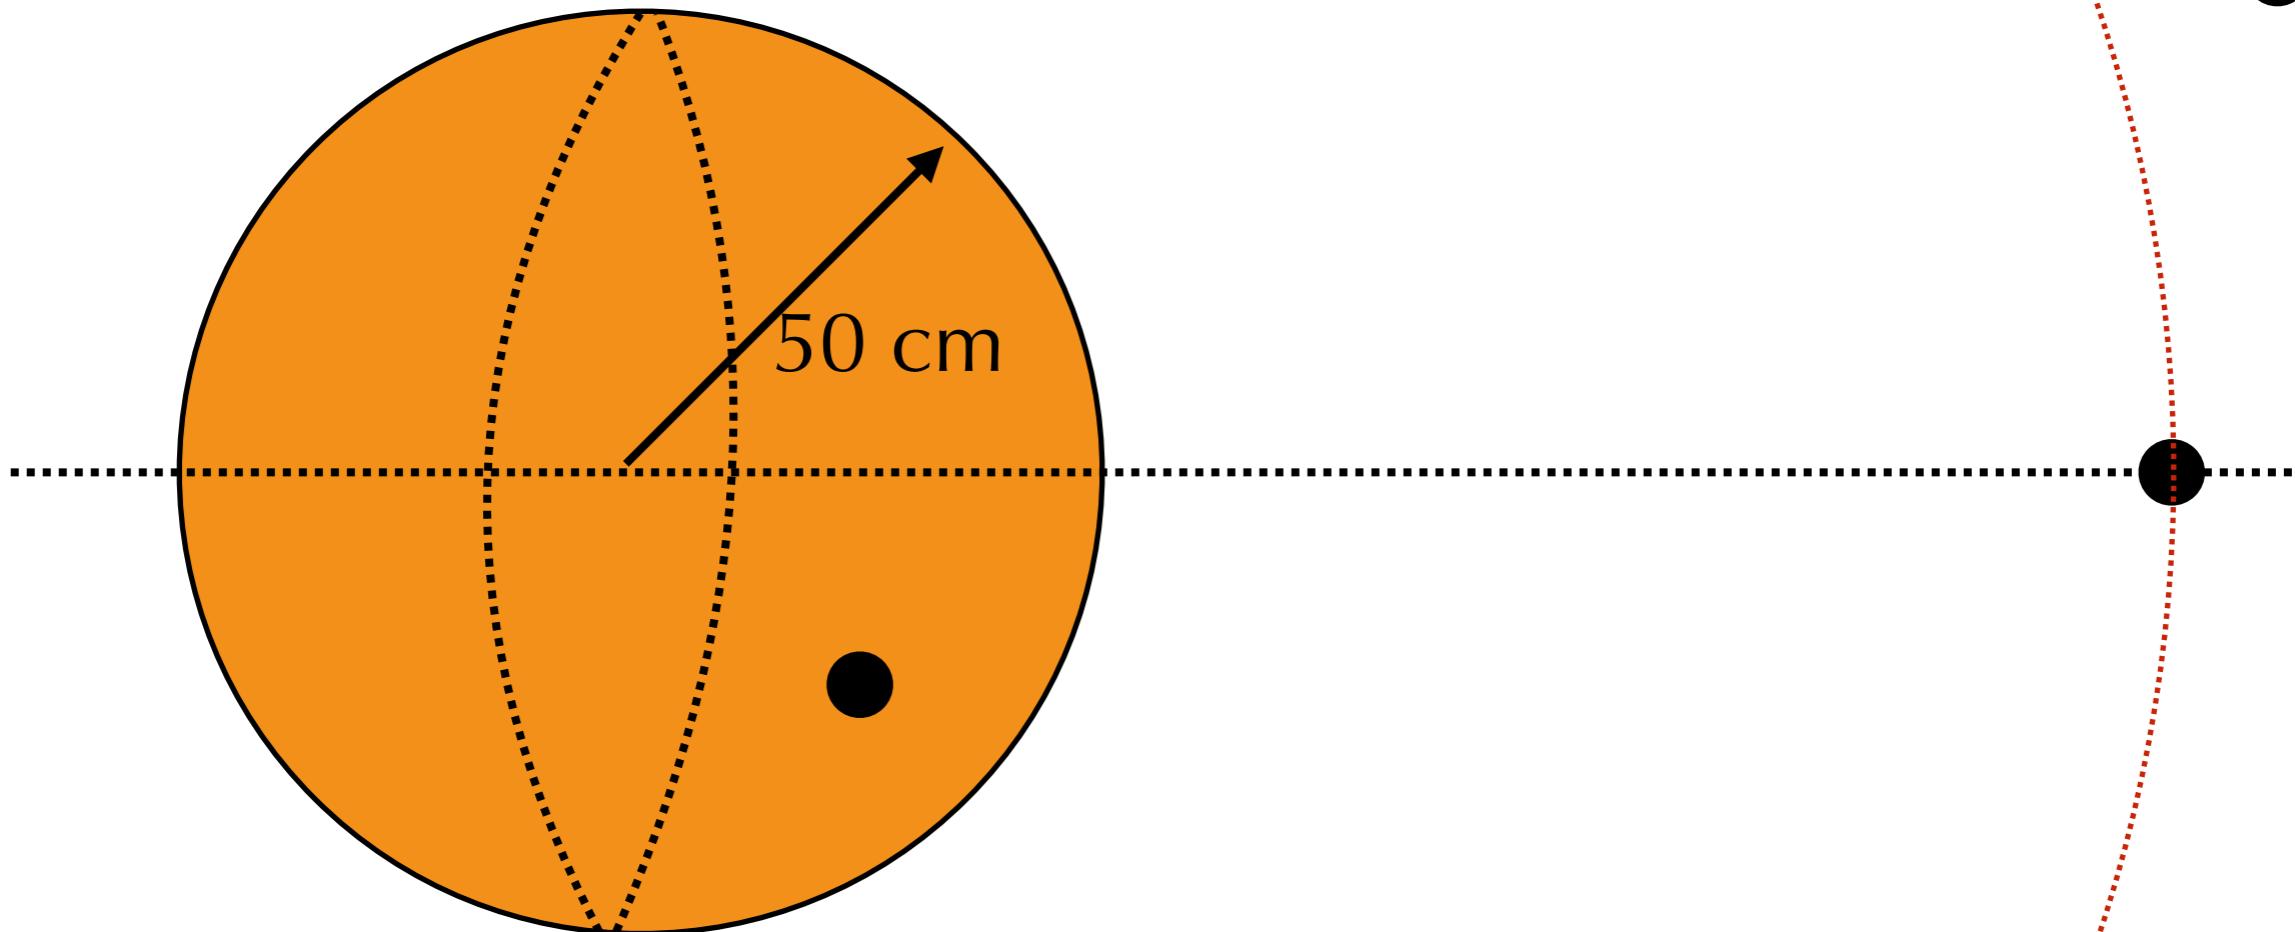

To your neighbor:

Describe your knee-jerk reaction to the problem
(What tool do you reach for?).

uniformly charged sphere

$$Q = 10 \text{ nC}$$

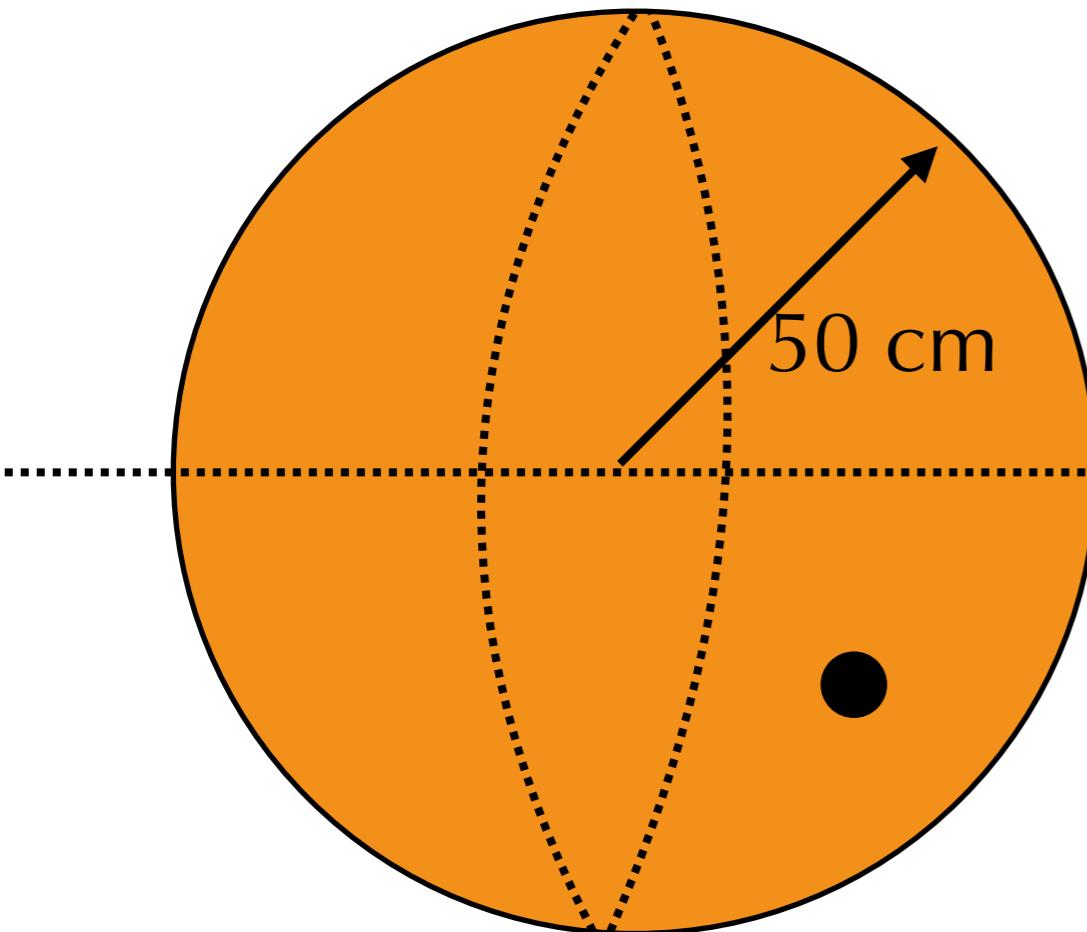

Find electric field at dot.

To your neighbor:
Describe your knee-jerk reaction to the problem
(What tool do you reach for?).

uniformly charged sphere

$$Q = 10 \text{ nC}$$

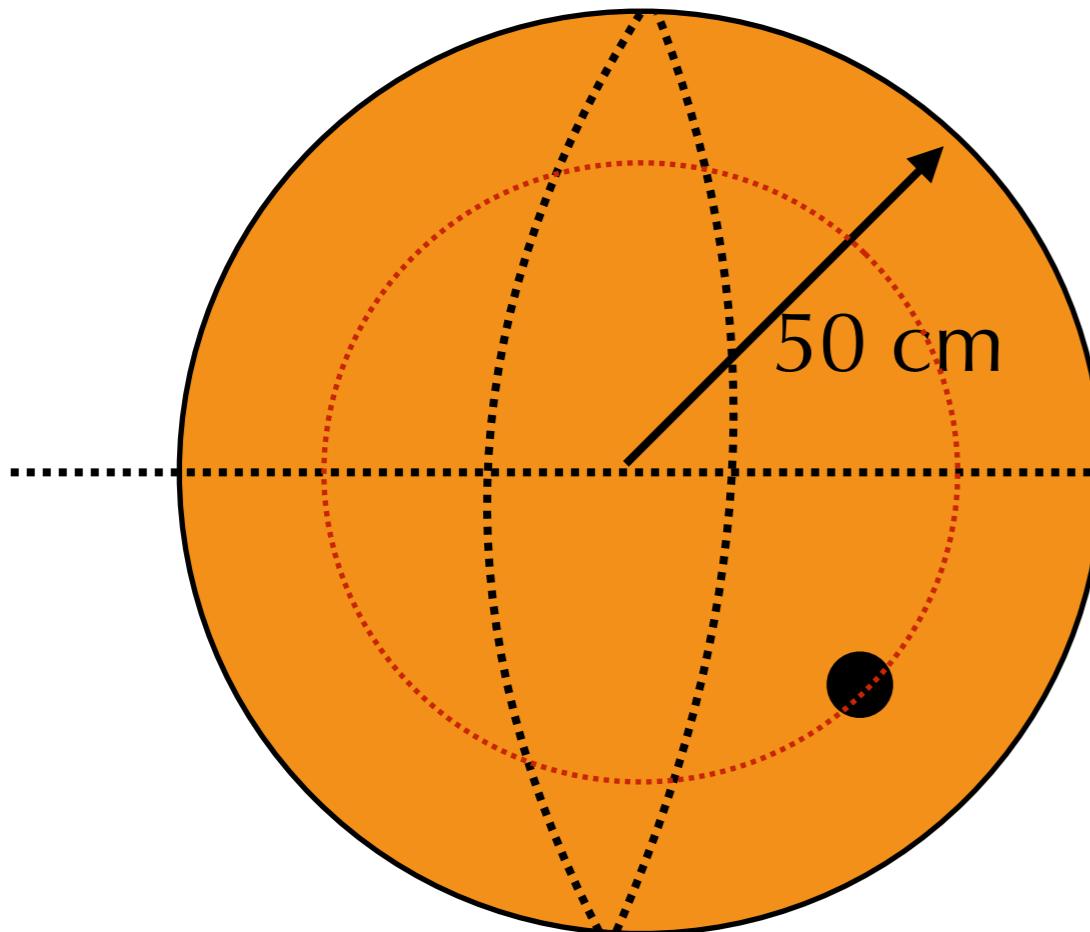

Find electric field at dot.

To your neighbor:
Describe your knee-jerk reaction to the problem
(What tool do you reach for?).

uniformly charged sphere

$$Q = 10 \text{ nC}$$

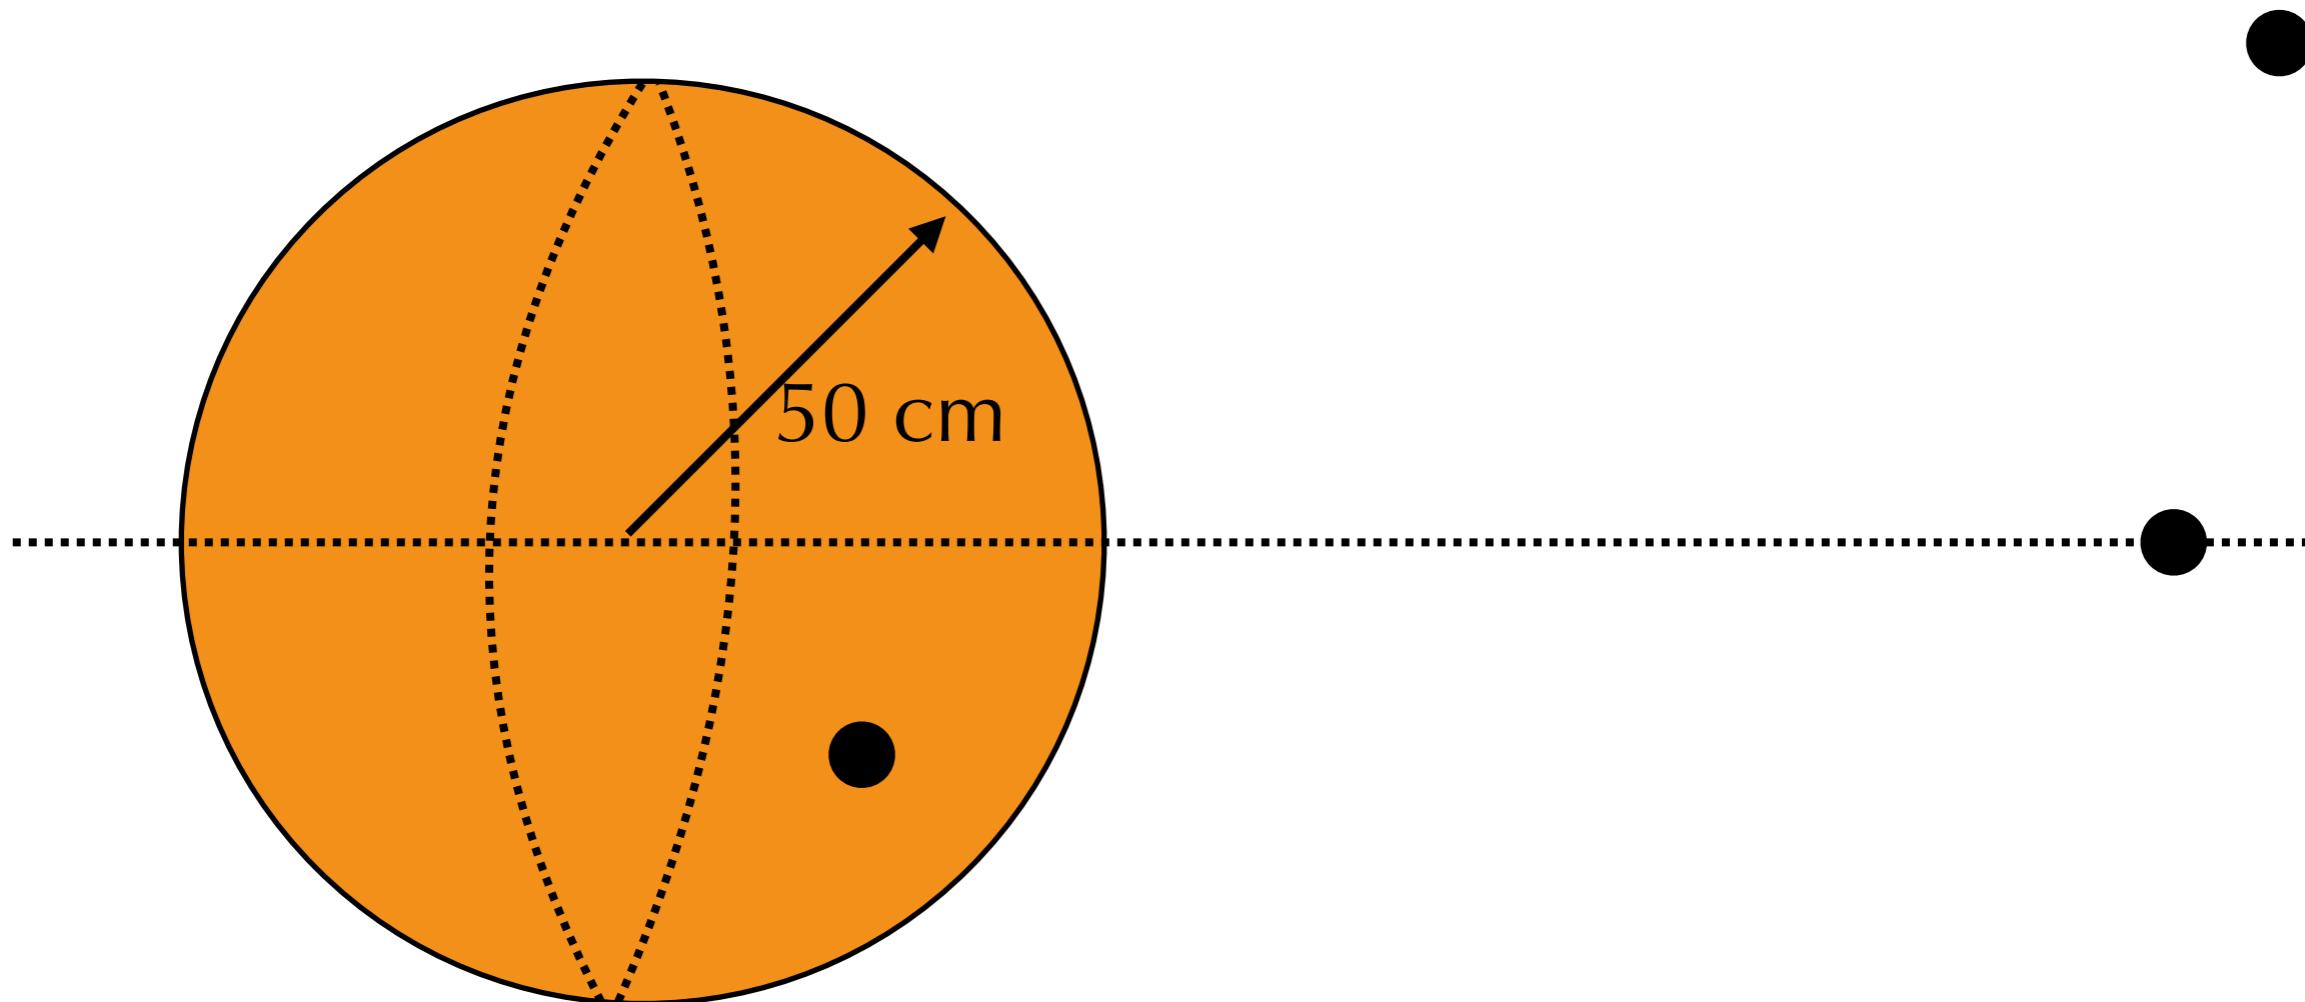

Find electric field at dot.

To your neighbor:
Describe your knee-jerk reaction to the problem
(What tool do you reach for?).

Find electric field at dot.

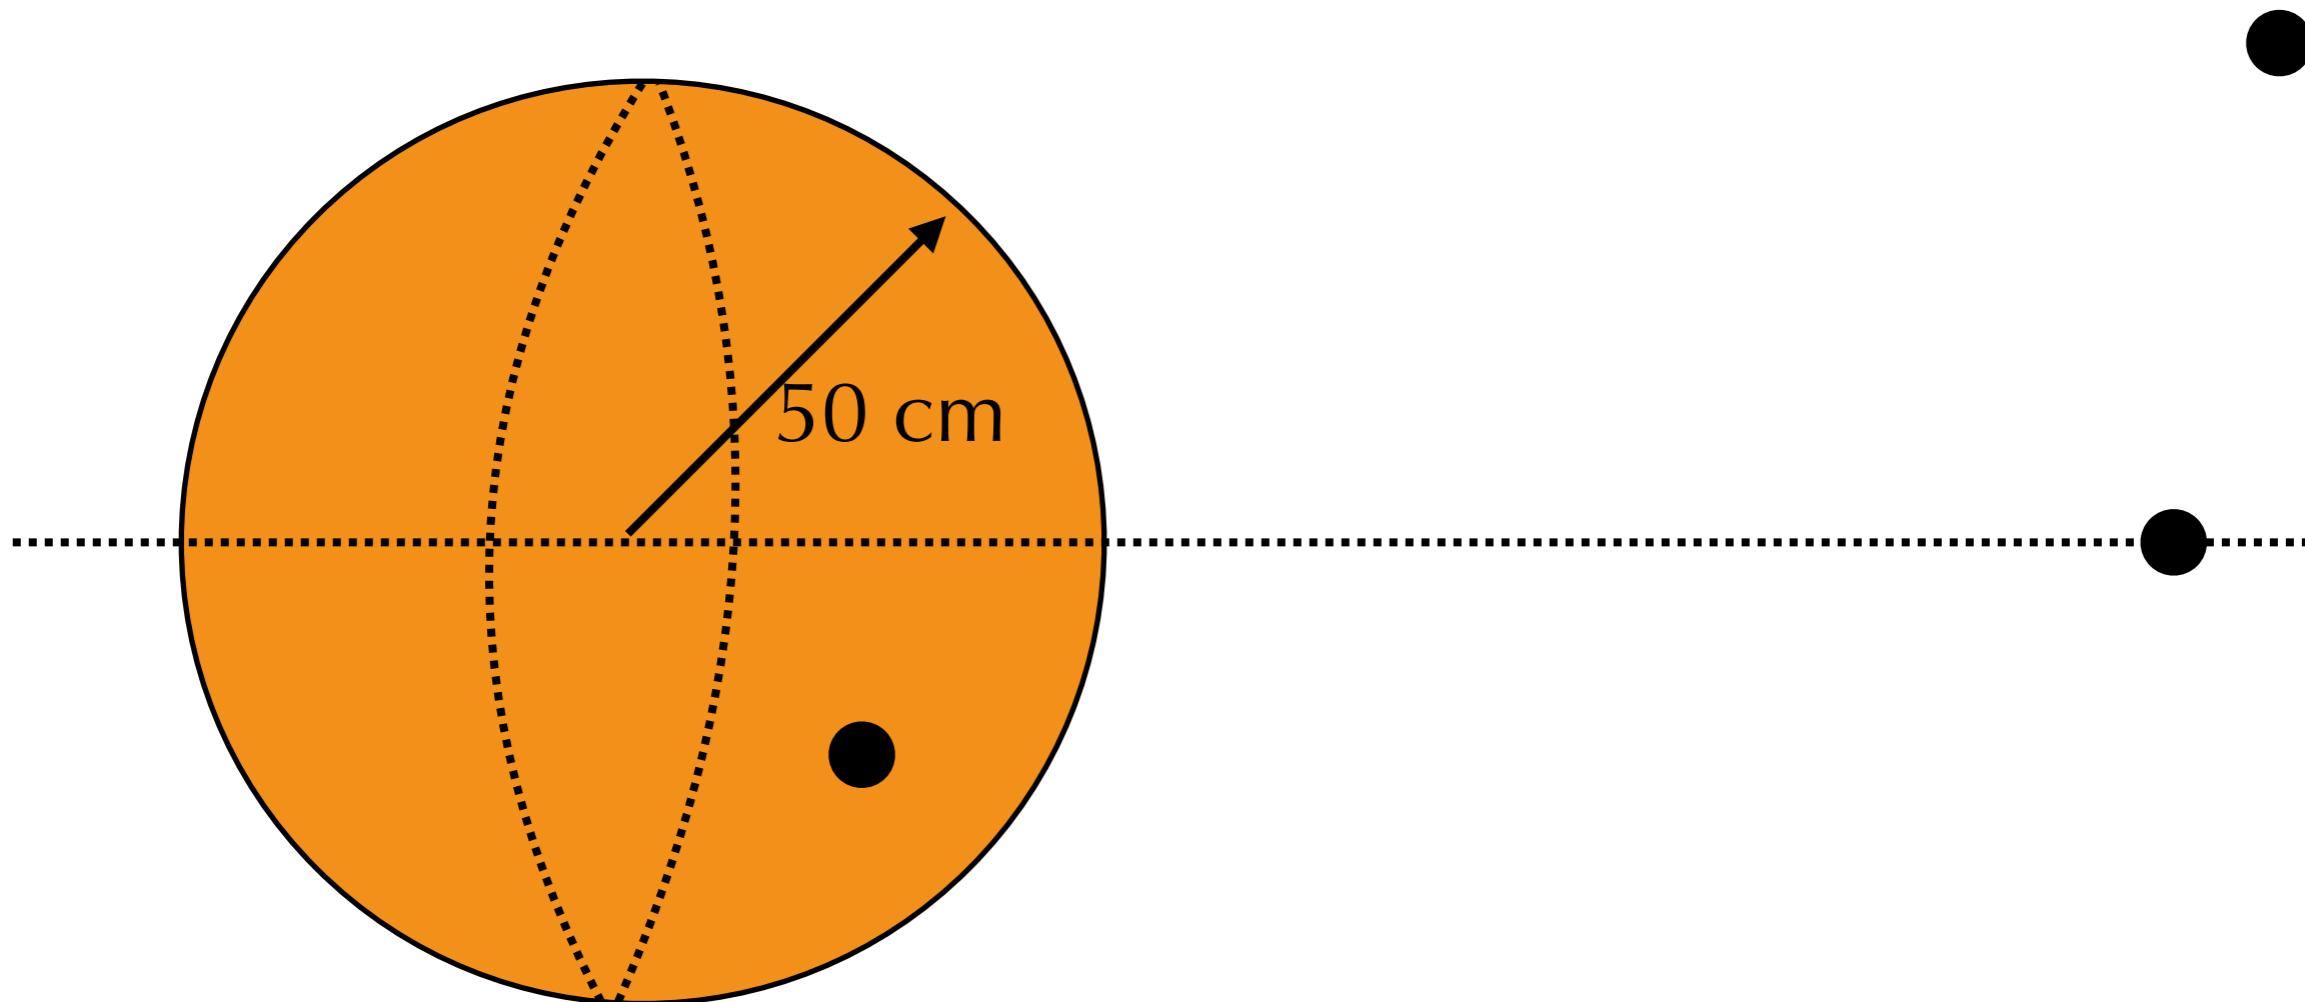

$$\rho(r) = 5\sqrt{r}$$

To your neighbor:
Describe your knee-jerk reaction to the problem
(What tool do you reach for?).

Find electric field at dot.

$$\rho(r) = 5\sqrt{r} \cos \theta$$

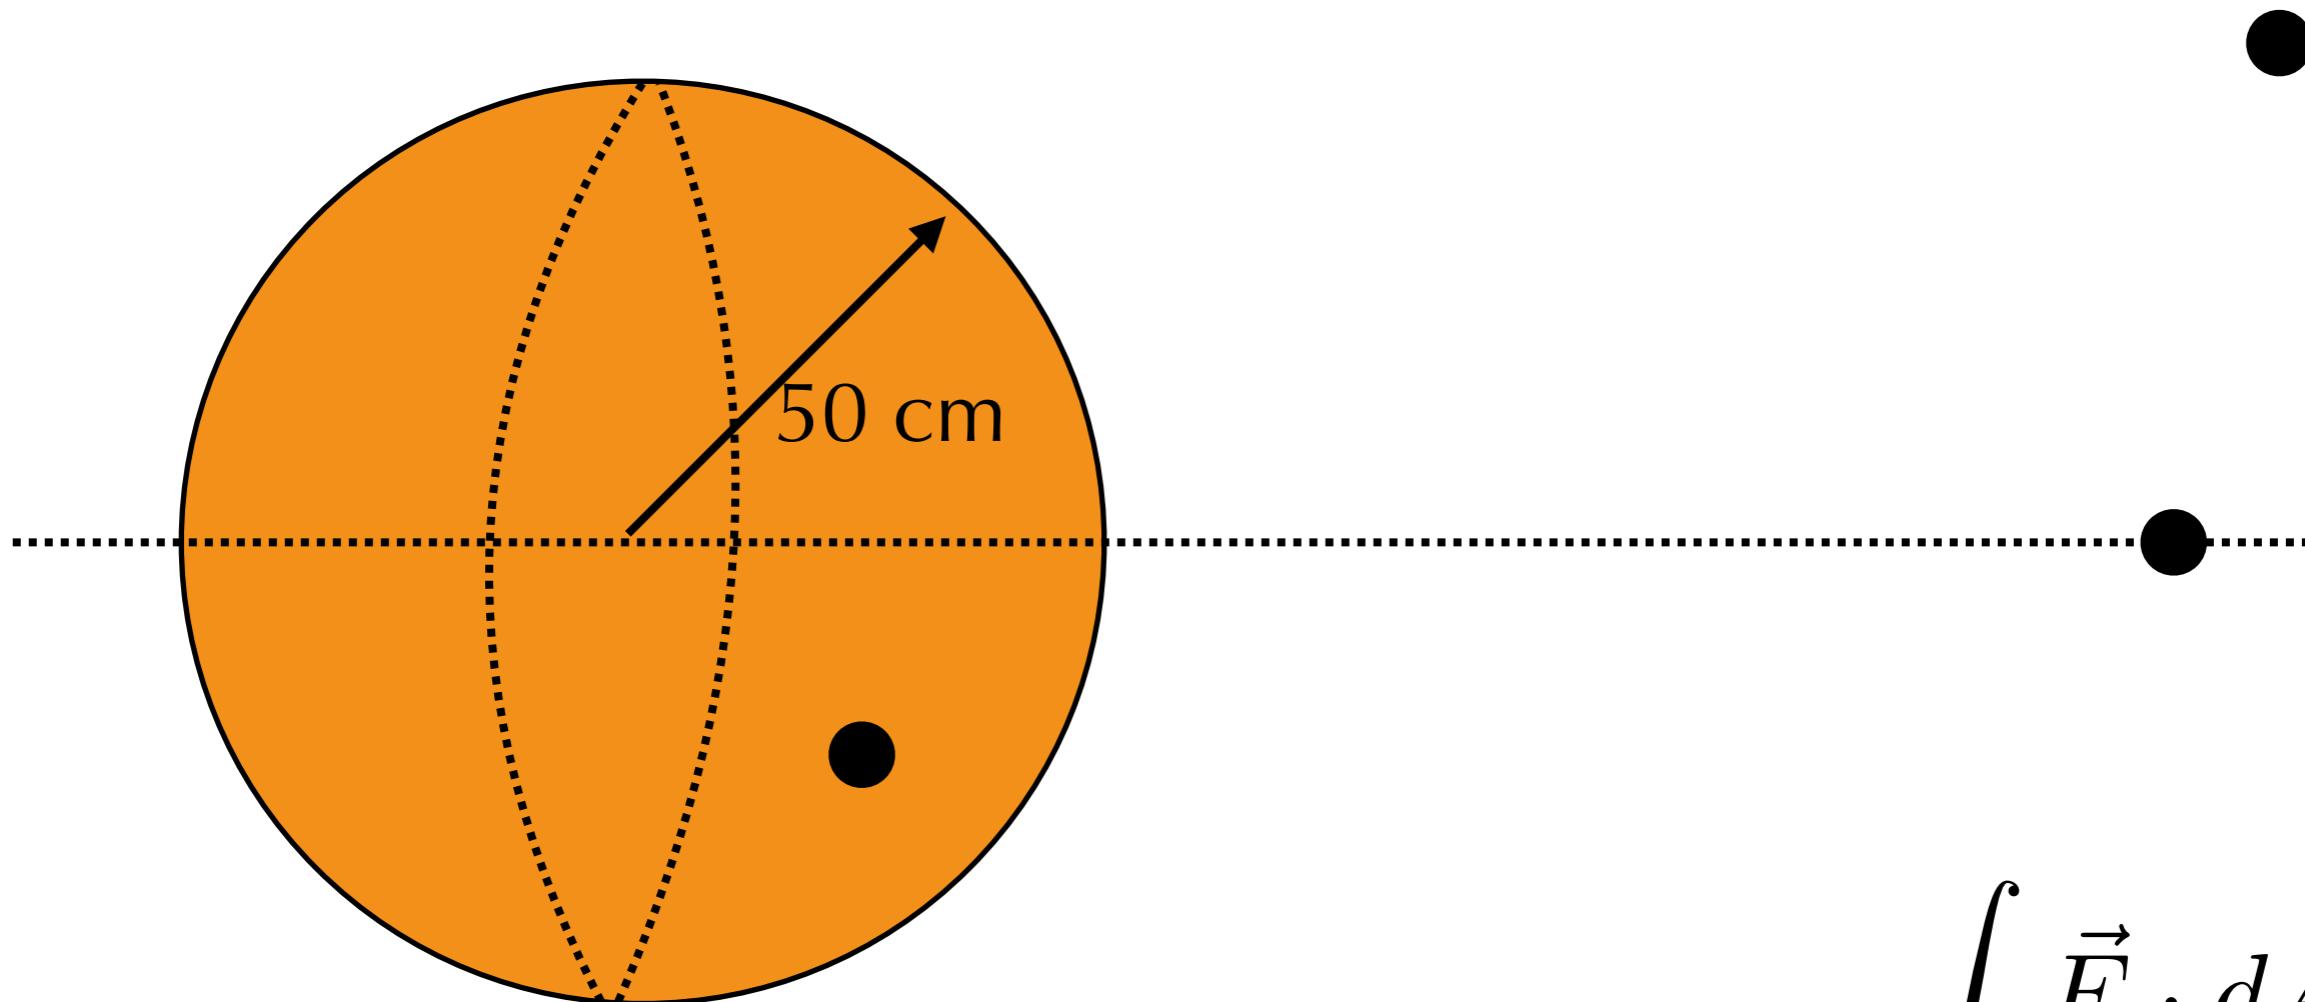

To your neighbor:

Describe your knee-jerk reaction to the problem
(What tool do you reach for?).

Find electric field at dot.

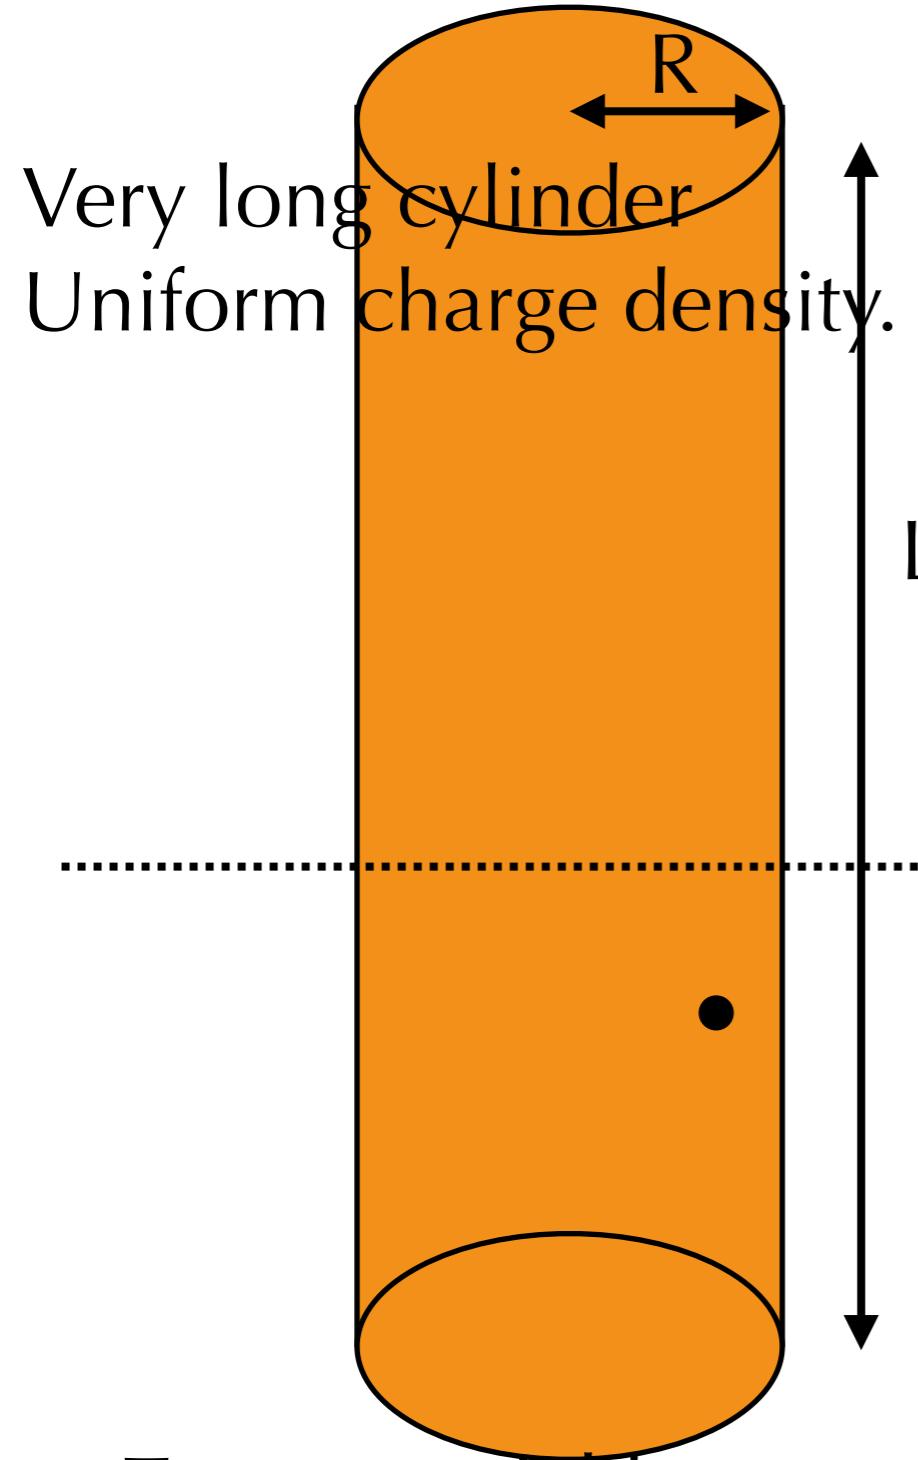

$$\rho(r) = 5\sqrt{r} \cos \theta$$

To your neighbor:

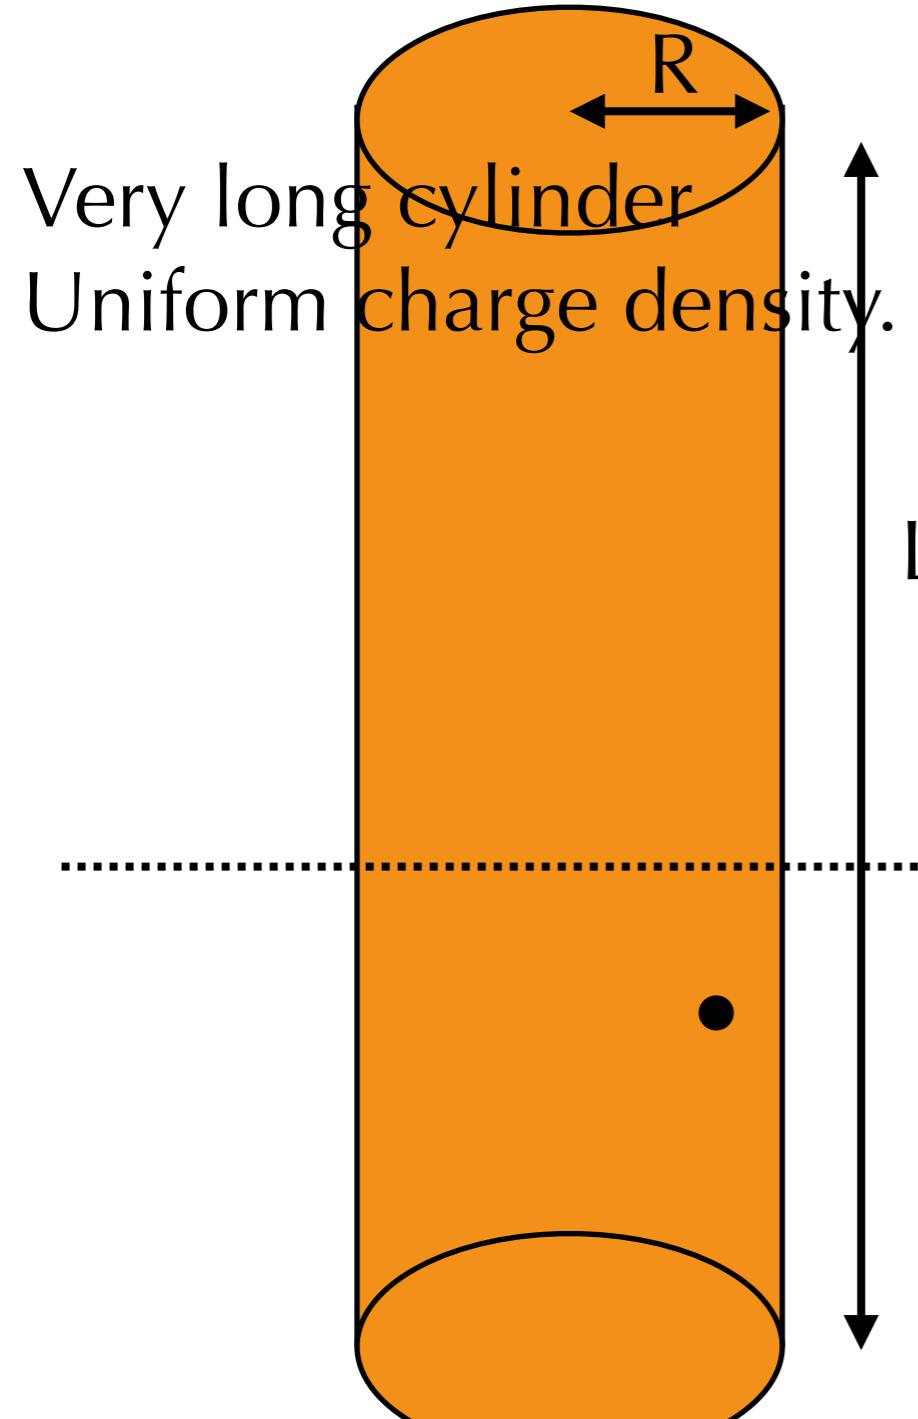

Describe your knee-jerk reaction to the problem
(What tool do you reach for?).

$$\int \vec{E} \cdot d\vec{A} = \frac{q_{in}}{\epsilon_0}$$

Find the electric potential at the black dots.

To your neighbor:
Describe your knee-jerk reaction to the problem
(What tool do you reach for?).

Find the electric potential at the black dots.

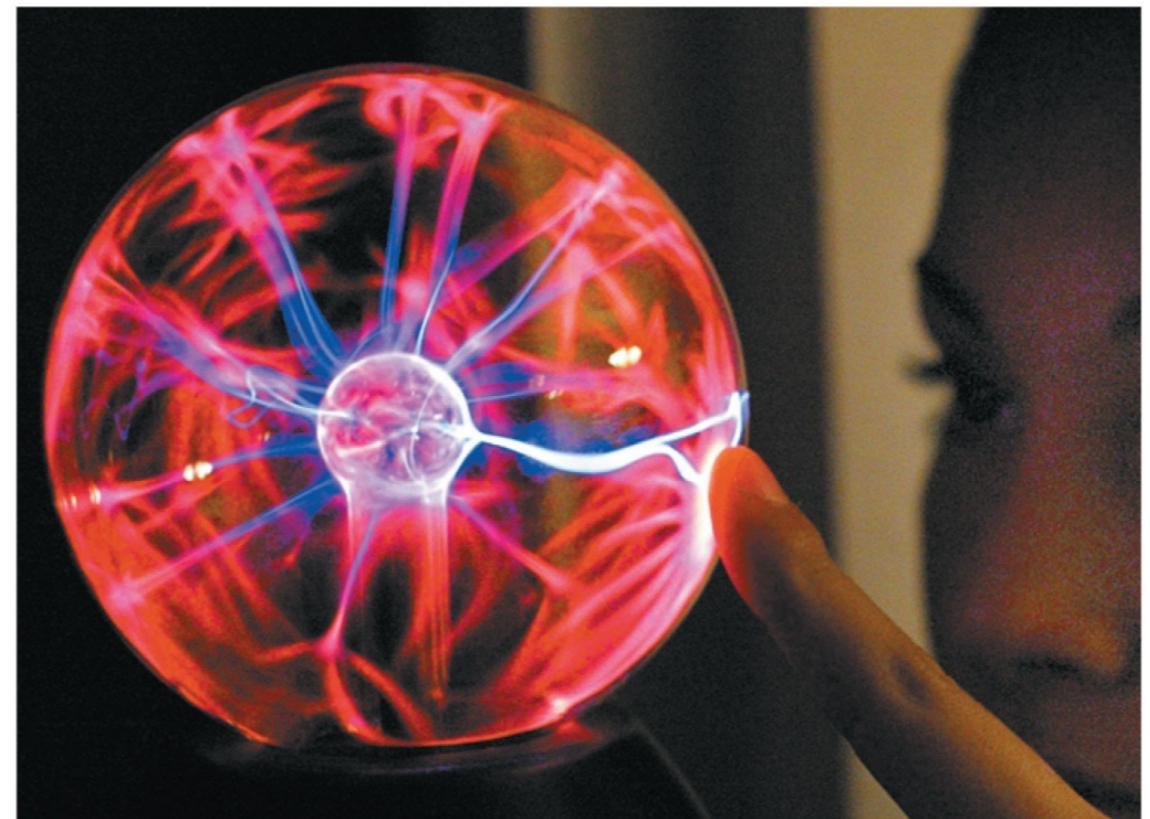

To your neighbor:

Describe your knee-jerk reaction to the problem
(What tool do you reach for?).

$$\int \vec{E} \cdot d\vec{A} = \frac{q_{in}}{\epsilon_0}$$

Electric Potential of sphere of charge

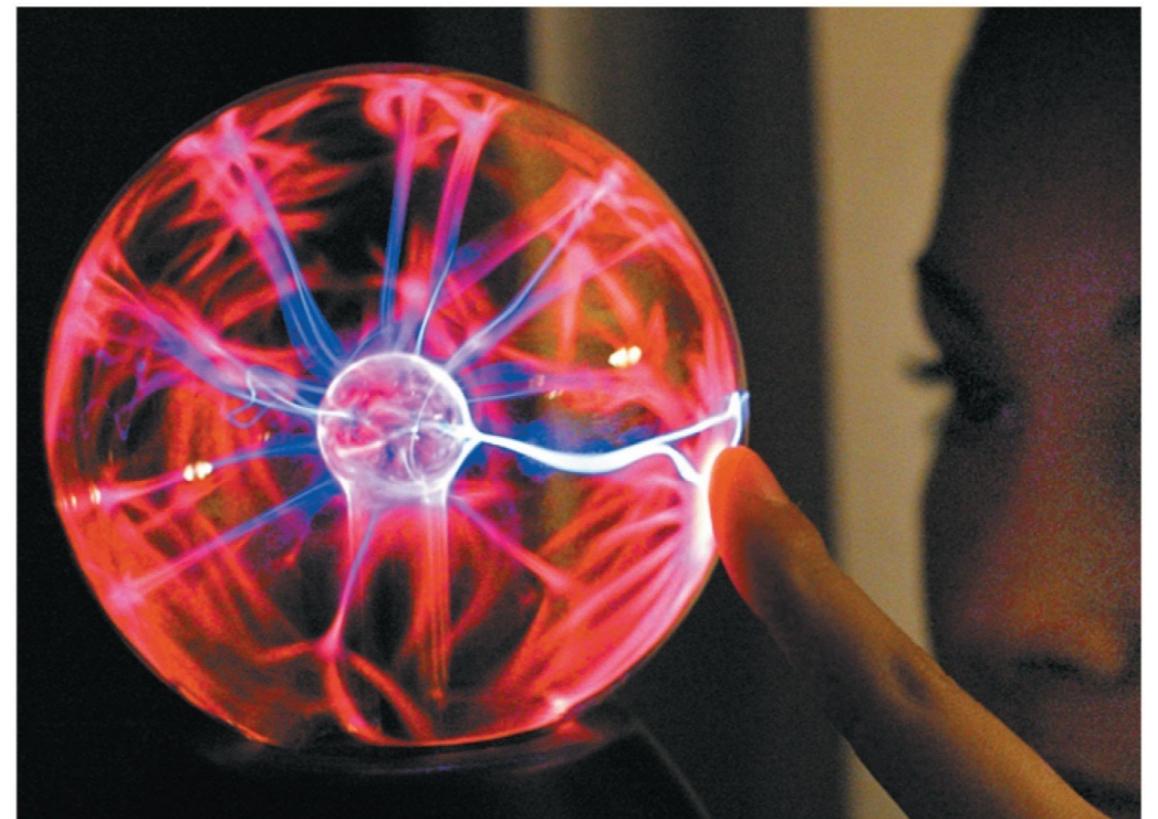

$$V = \frac{1}{4\pi\epsilon_0} \frac{Q}{r} \quad \text{outside}$$

Electric Potential of sphere of charge

$$V = \frac{1}{4\pi\epsilon_0} \frac{Q}{r} \quad \text{outside}$$

$$V_0 = \frac{1}{4\pi\epsilon_0} \frac{Q}{R}$$

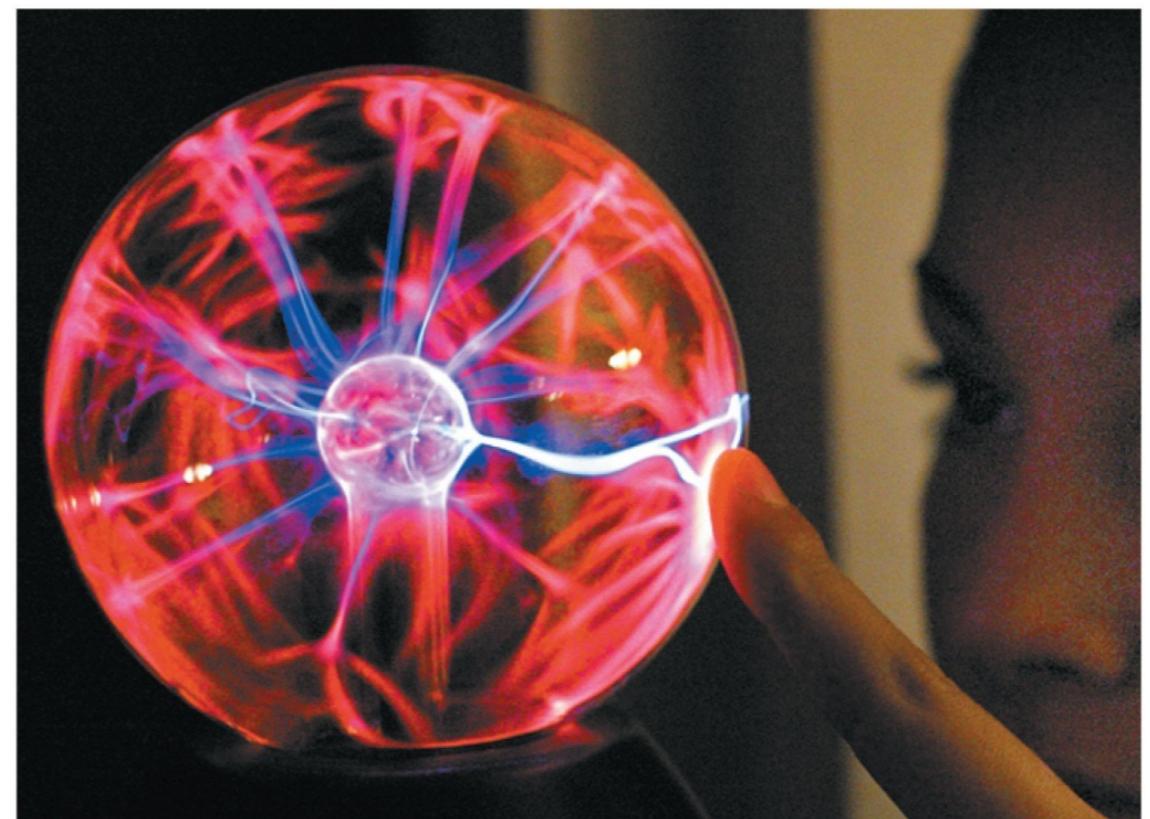

Electric Potential of sphere of charge

$$V = \frac{1}{4\pi\epsilon_0} \frac{Q}{r} \quad \text{outside}$$

$$V_0 = \frac{1}{4\pi\epsilon_0} \frac{Q}{R}$$

$$Q = V_0 4\pi\epsilon_0 R$$

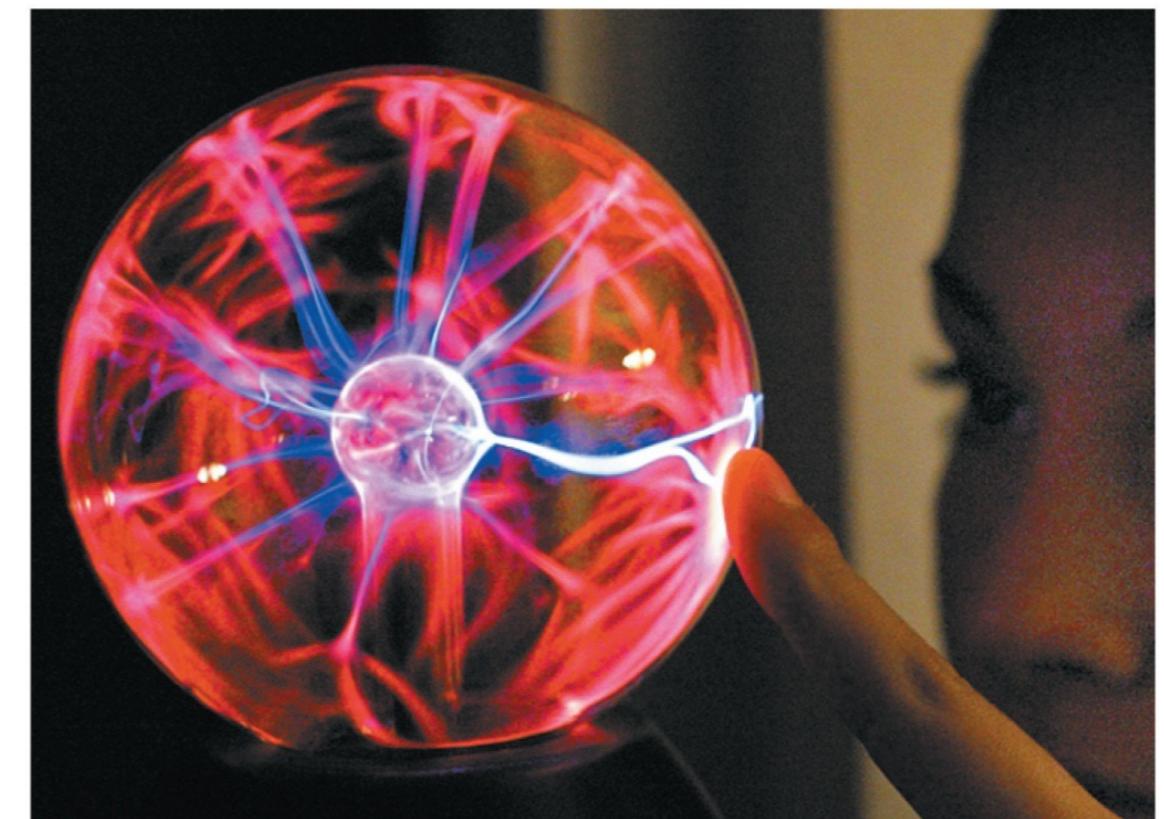

Electric Potential of sphere of charge

$$V = \frac{1}{4\pi\epsilon_0} \frac{Q}{r} \quad \text{outside}$$

$$V_0 = \frac{1}{4\pi\epsilon_0} \frac{Q}{R}$$

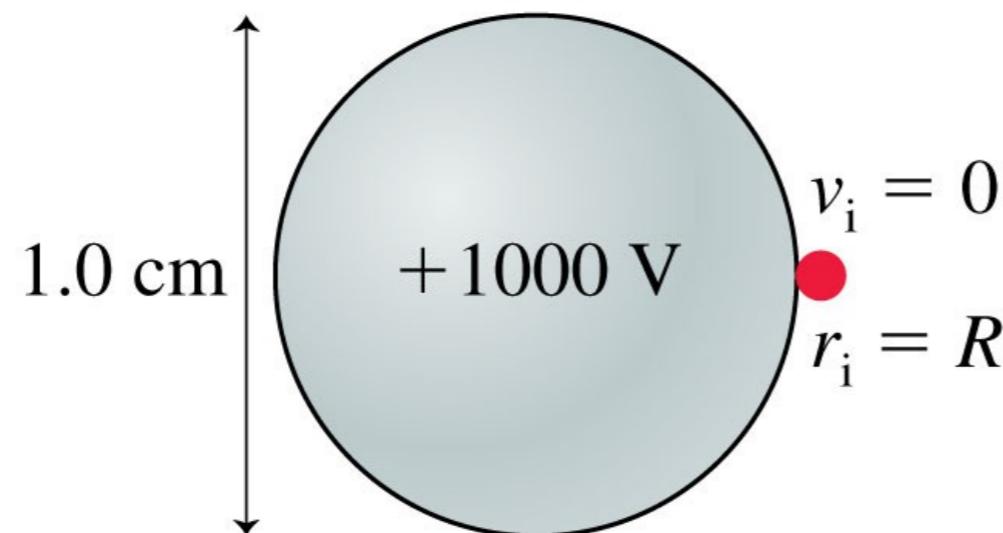

$$Q = V_0 4\pi\epsilon_0 R$$

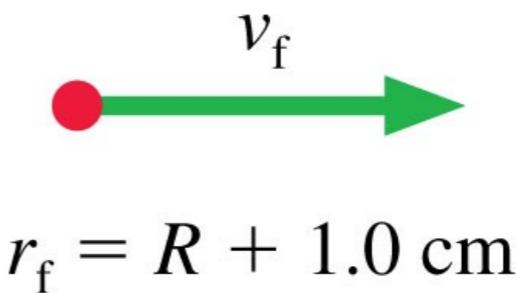

$$V = \frac{R}{r} V_0 \quad \text{potential of a charged sphere}$$

How much charge is on this sphere?

Before:

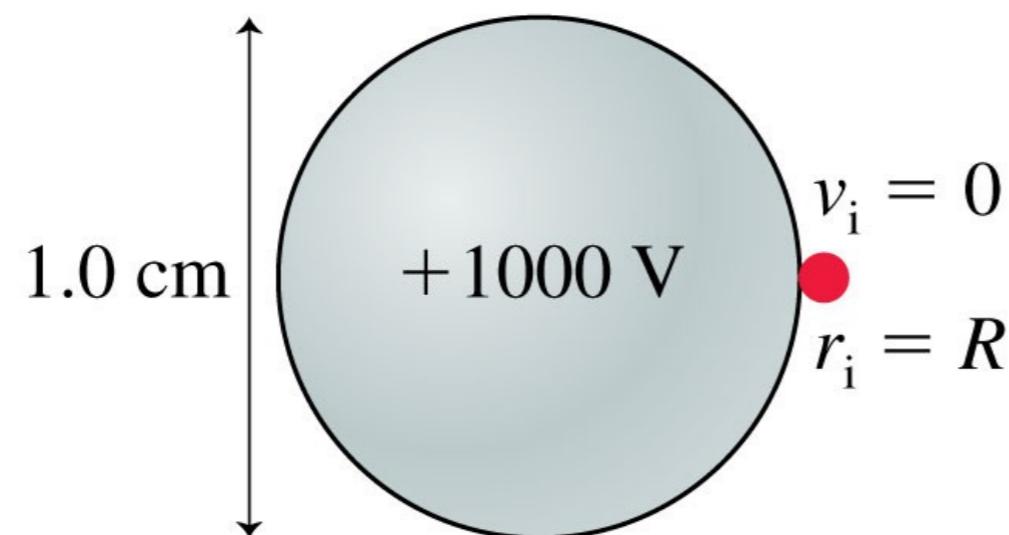

After:

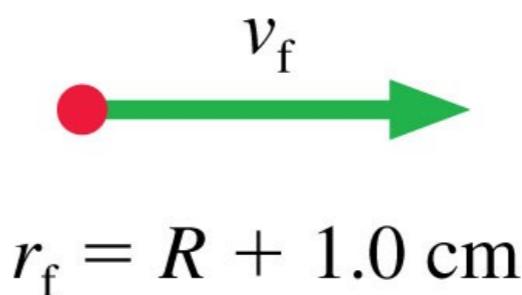

How much charge is on this sphere? 0.56 nC

Before:

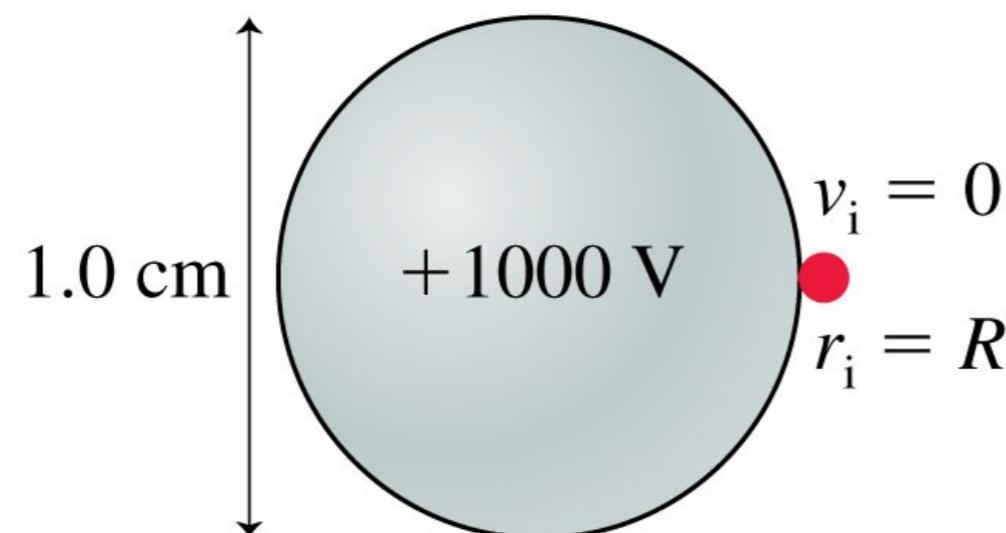

After:

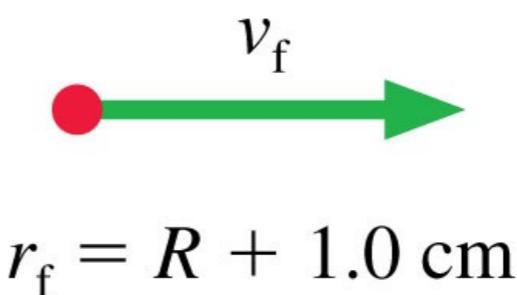

How much charge is on this sphere? 0.56 nC

If a proton is released from rest at the surface of the sphere, how fast will it be going when it is 1.0 cm away from the surface?

Before:

After:

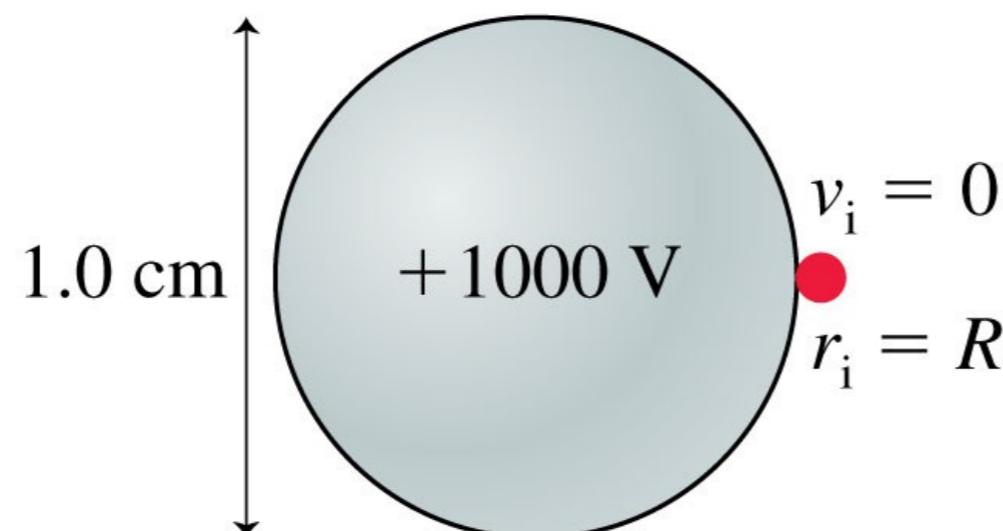

How much charge is on this sphere? 0.56 nC

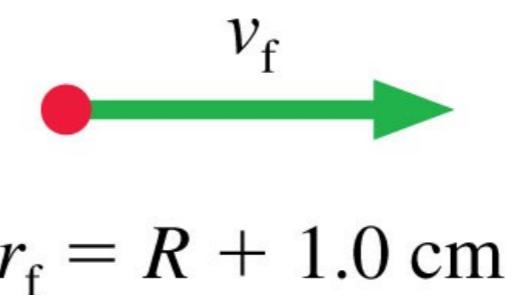

If a proton is released from rest at the surface of the sphere, how fast will it be going when it is 1.0 cm away from the surface?

$$3.6 \times 10^5 \text{ m/s}$$

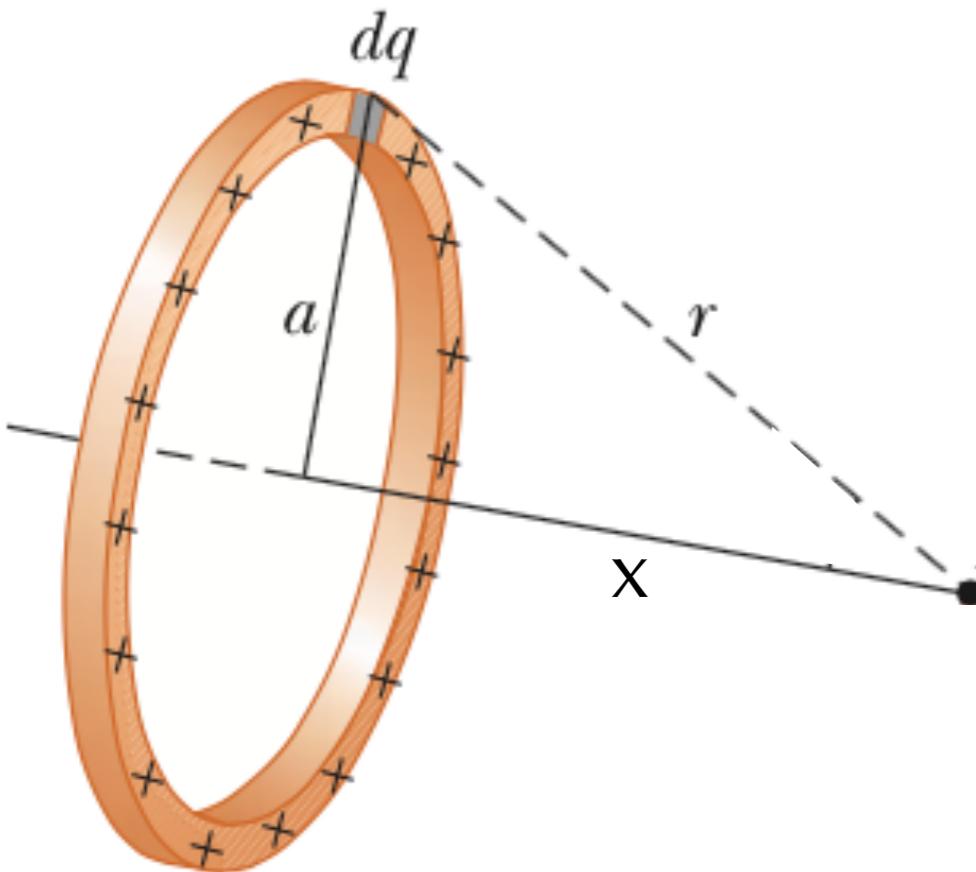

Before:

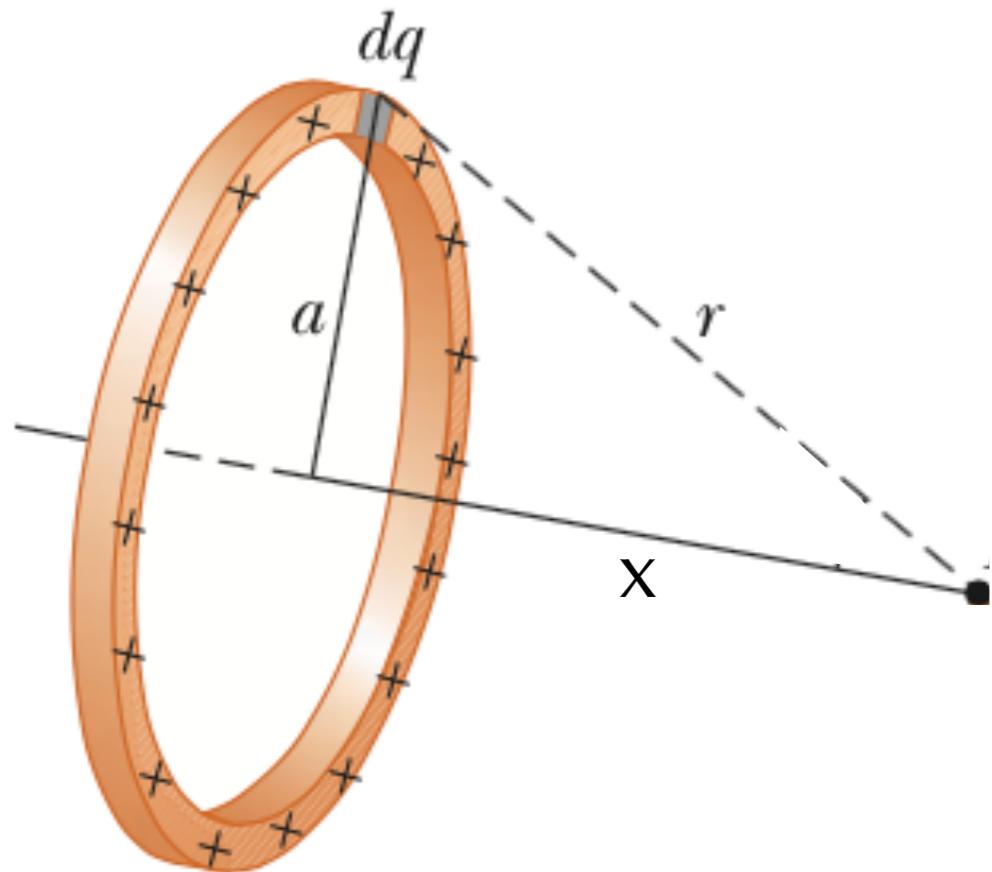

After:

Can you calculate the electric potential due to this ring of charge?

Can you calculate the electric potential due to this ring of charge?

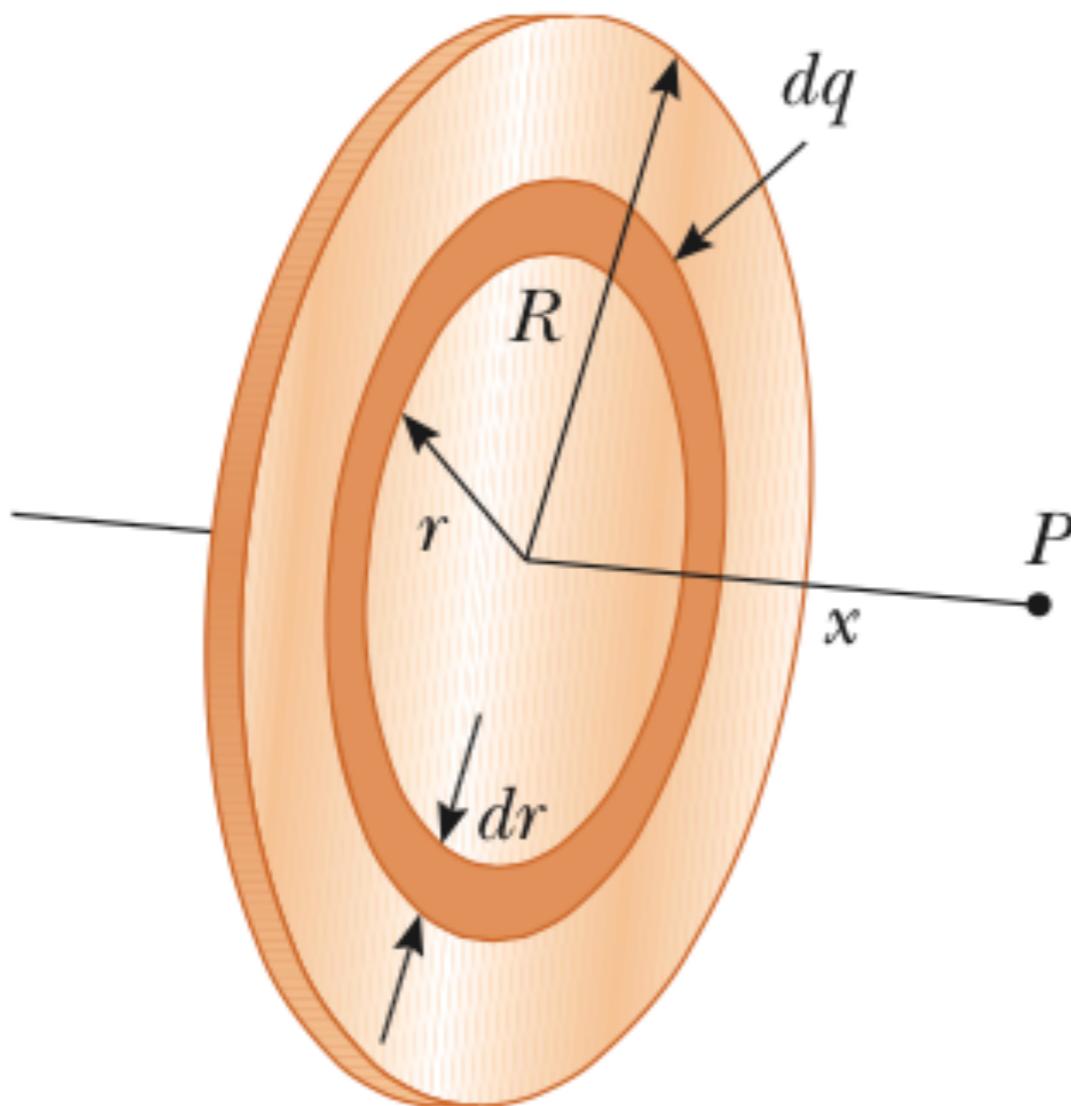

$$V = \frac{kq}{\sqrt{x^2 + a^2}}$$

$R = 17.5 \text{ mm}$

$Q = + 5.00 \text{ nC}$

Find the potential of this disk at x ?

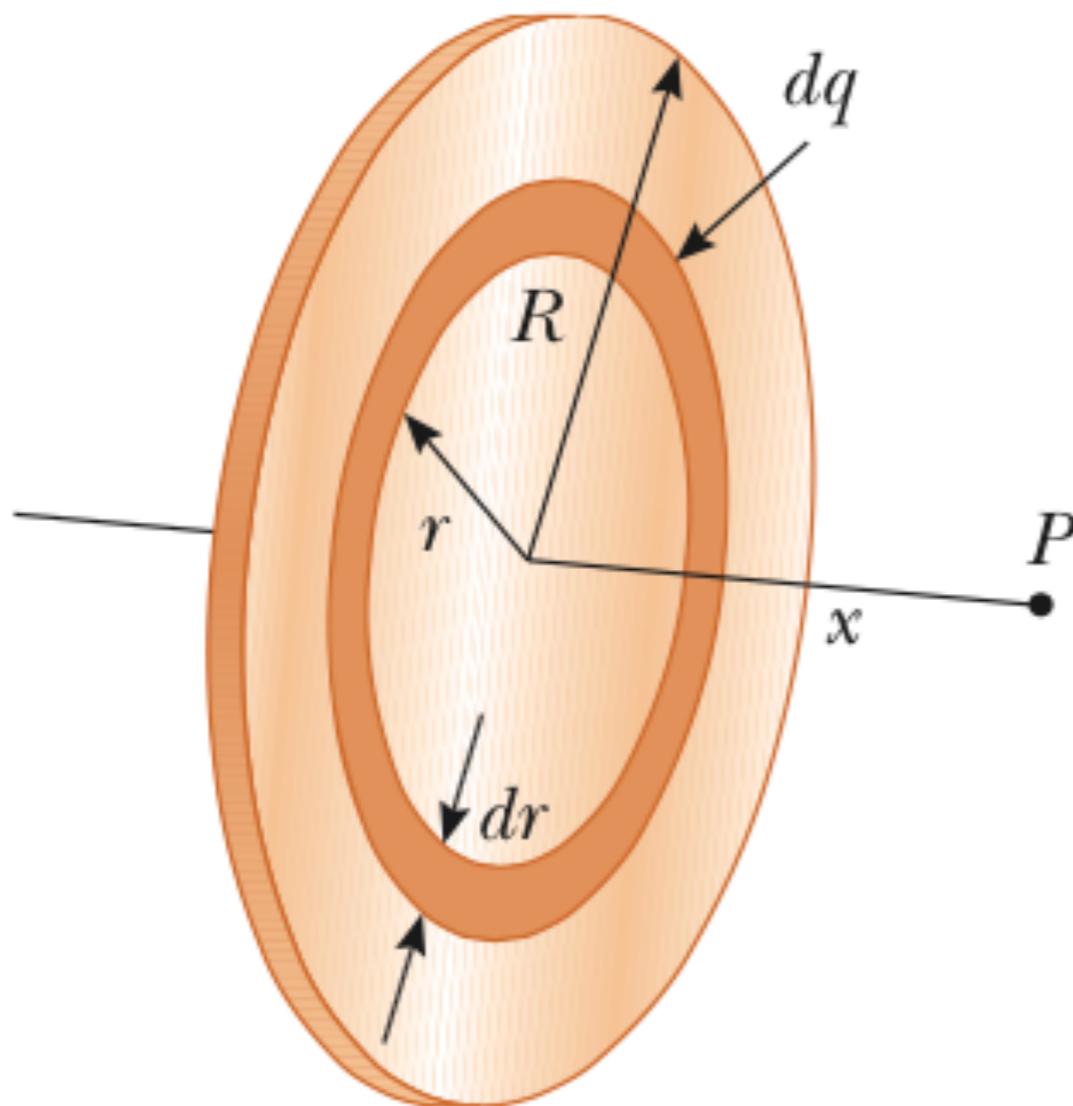

Evaluate at $x=0$ and $x = 1.00 \text{ cm}$.

$R = 17.5 \text{ mm}$

$Q = + 5.00 \text{ nC}$

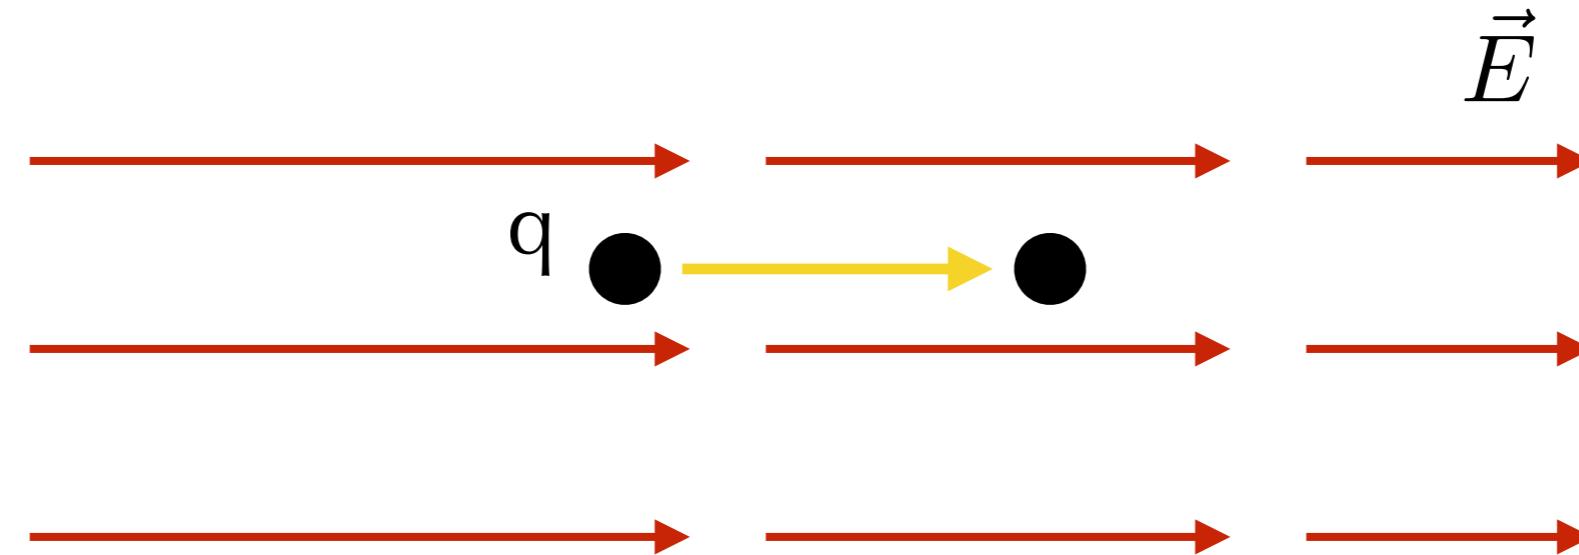

Find the potential of this disk at x ?

Evaluate at $x=0$ and $x = 1.00 \text{ cm}$.

$$V = \frac{Q}{2\pi\epsilon_0 R^2} (\sqrt{R^2 + x^2} - x)$$

Which expression correctly gives the change in potential energy of the charge as it moves from left to right?

a) $\Delta U = -qE\Delta x$

b) $\Delta U = q\Delta x$

c) $\Delta U = -q \int_i^f E(x)dx$

d) $\Delta U = q \int_i^f E(x)dx$

$$\Delta U = -q \int_i^f E(x) dx$$

What if I divide both sides by q?

$$\Delta U = -q \int_i^f E(x) dx$$

What if I divide both sides by q?

$$\boxed{\Delta V = - \int_i^f E(x) dx}$$

$$\Delta U = -q \int_i^f E(x) dx$$

What if I divide both sides by q?

$$\boxed{\Delta V = - \int_i^f E(x) dx}$$

What if I take the derivative of both sides?

$$\Delta U = -q \int_i^f E(x) dx$$

What if I divide both sides by q?

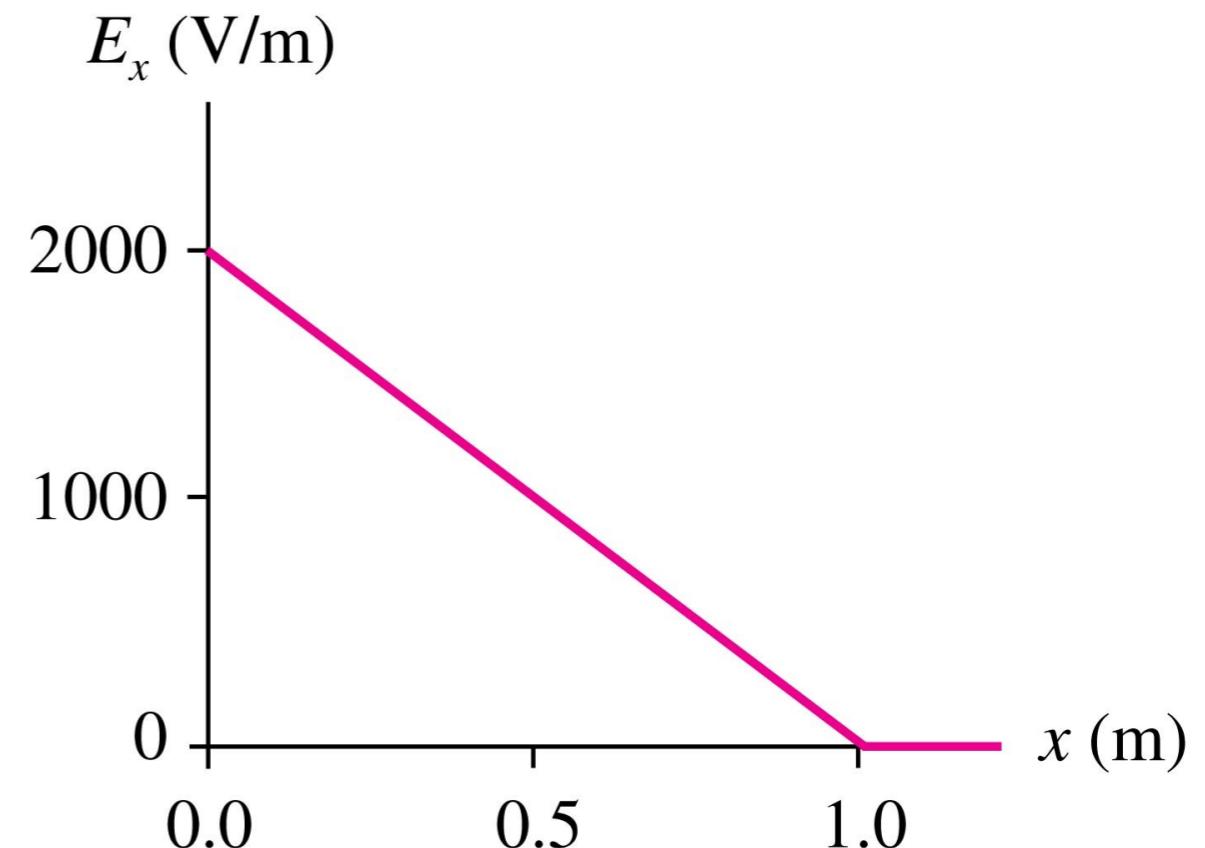

$$\Delta V = - \int_i^f E(x) dx$$

What if I take the derivative of both sides?

$$E = - \frac{dV}{dx}$$

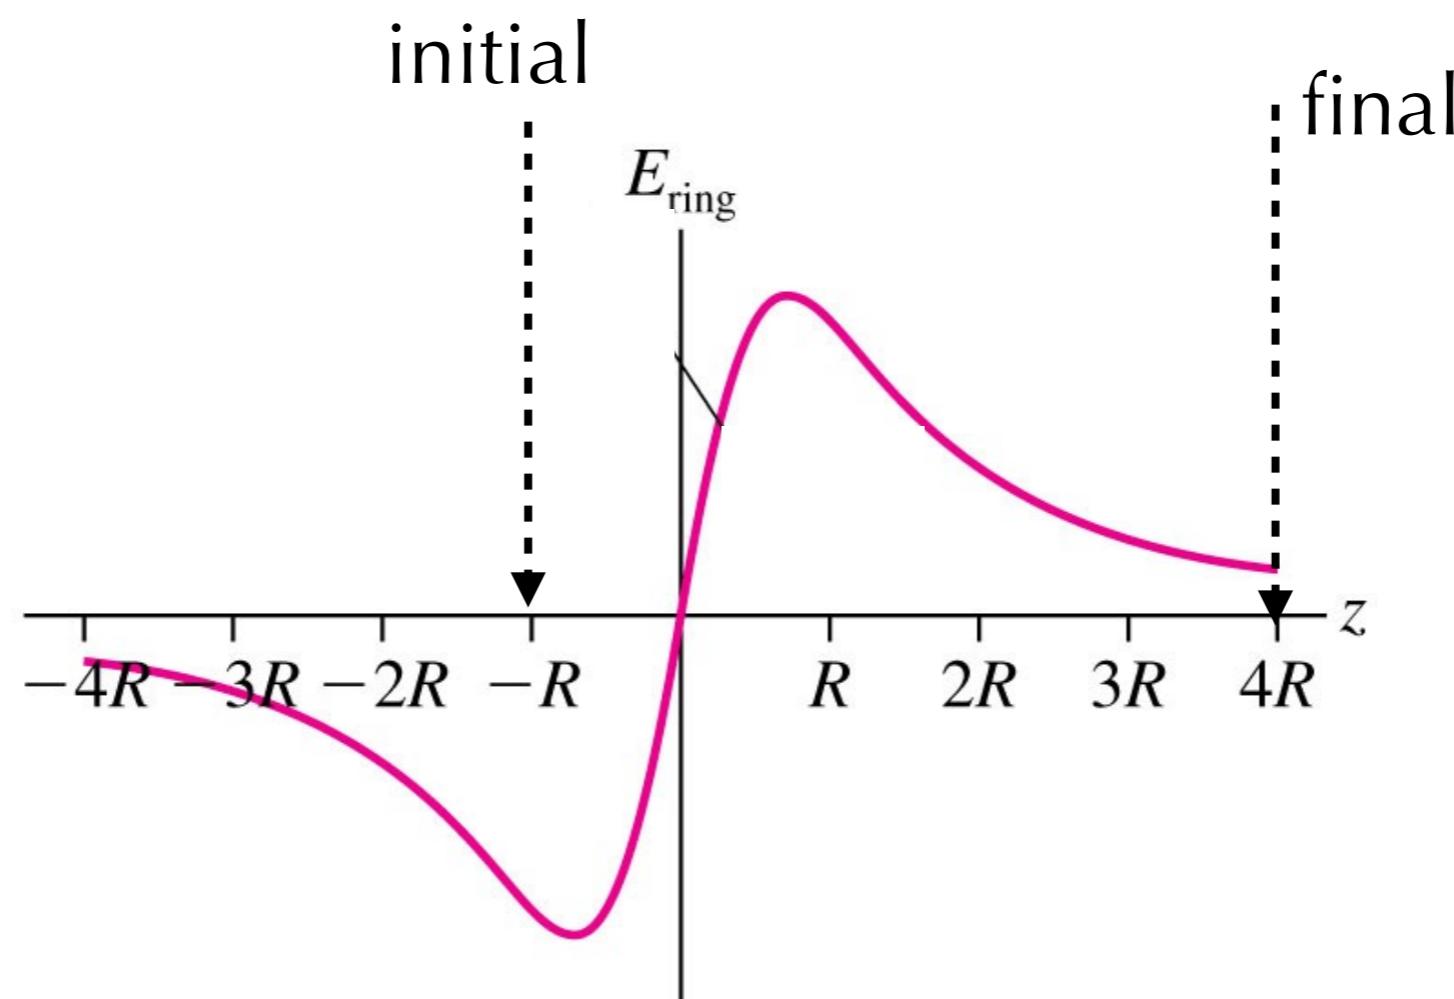

This is a graph of the x -component of the electric field along the x -axis. The potential is zero at the origin. What is the potential at $x = 1\text{ m}$?

- a) 2000 V
- b) 1000 V
- c) 0 V
- d) -1000 V
- e) -2000 V

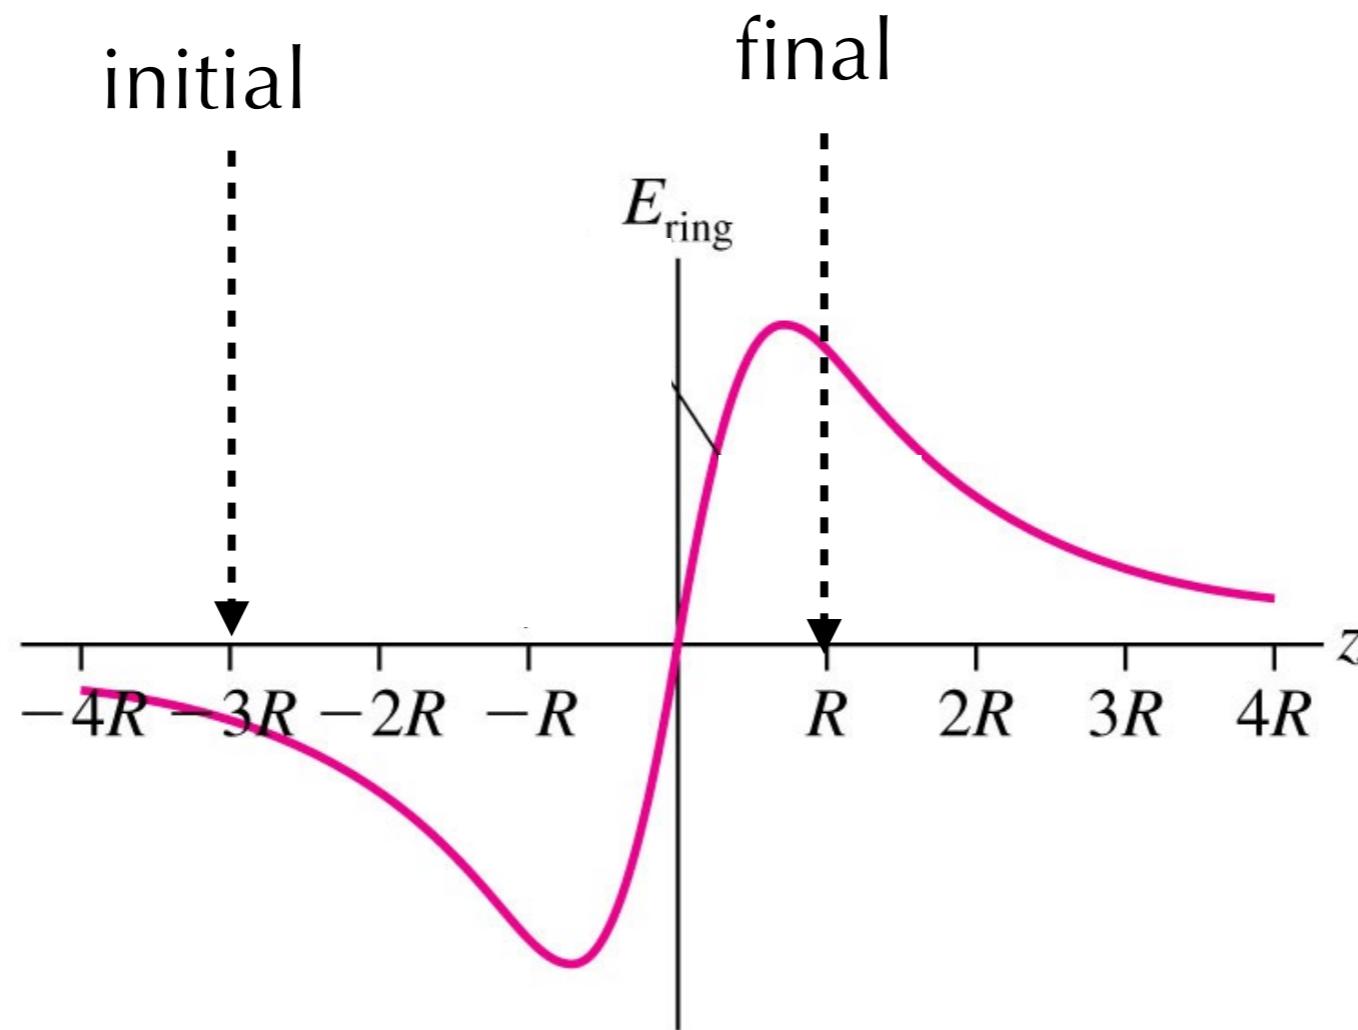

The potential difference between these two points is?

- a) positive
- b) negative
- c) zero

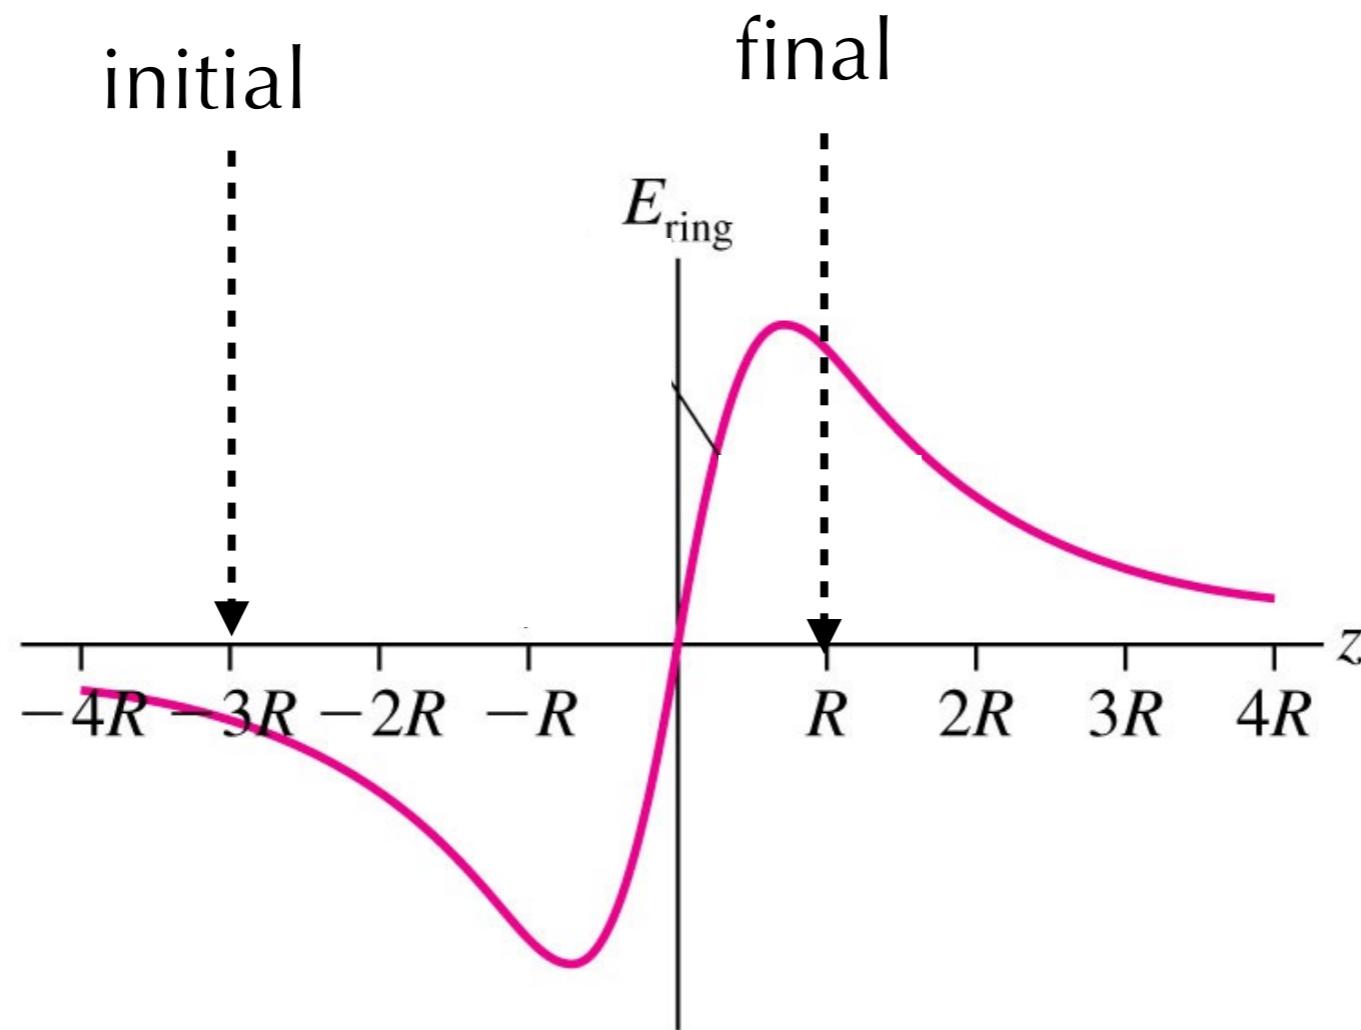

The potential difference between these two points is?

- a) positive
- b) negative
- c) zero

The potential difference between these two points is?

- a) positive
- b) negative
- c) zero

The potential energy of an electron

- a) decreases
- b) increases
- c) remains unchanged

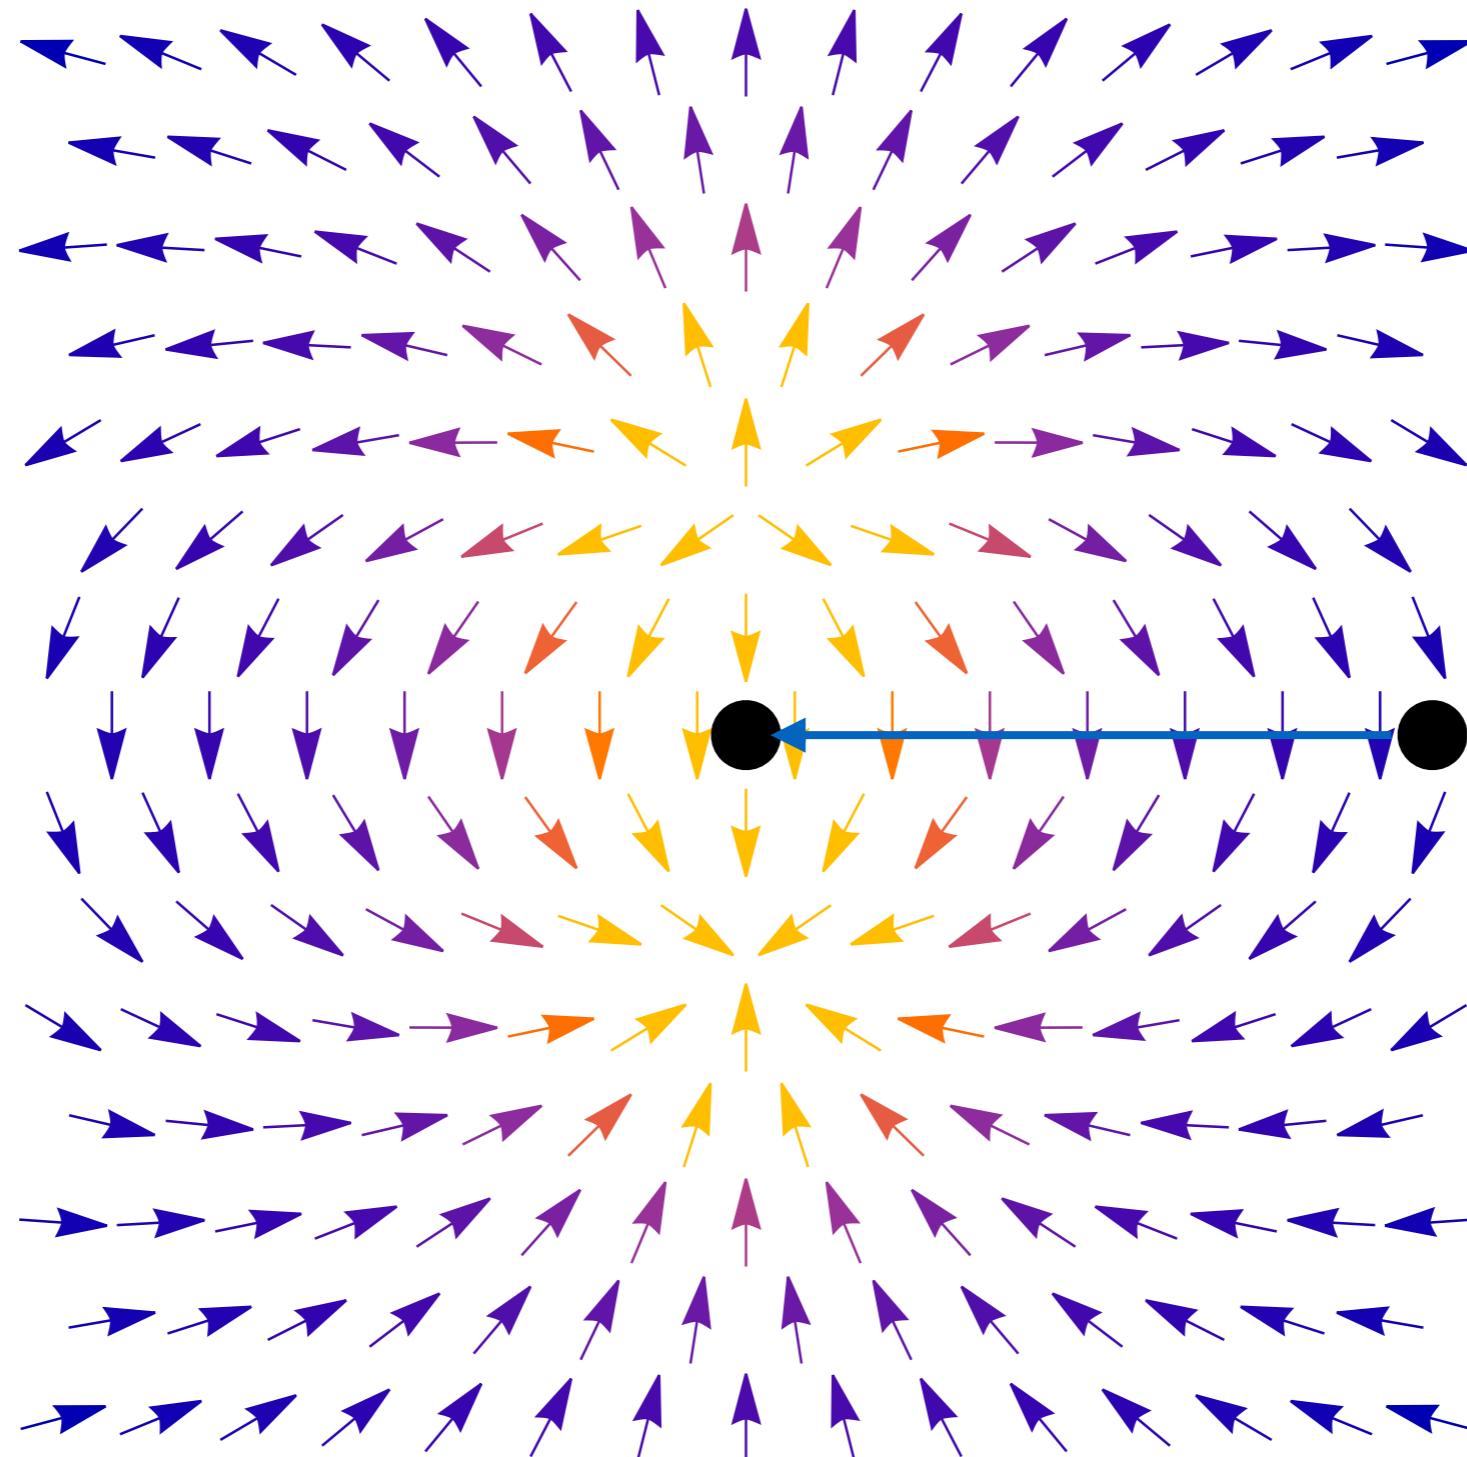

2D Electric Field

What is the potential difference between these two points?

a) positive

b) zero

c) negative

2D Electric Field

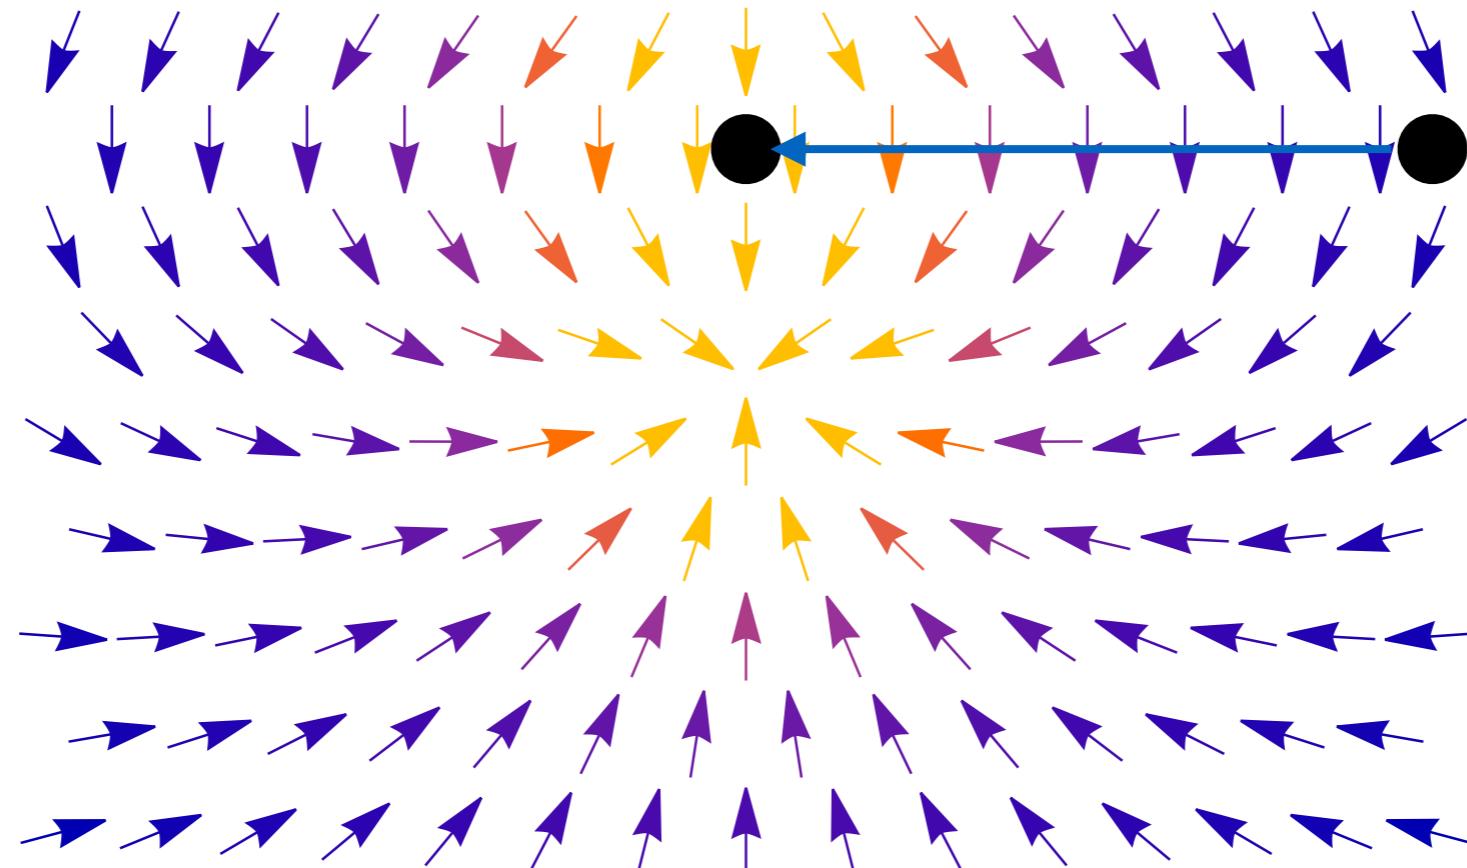

What is the potential difference between these two points?

a) positive

b) zero

c) negative

$$\Delta V = - \int \vec{E} \cdot d\vec{r}$$

Does the electric field point to the left or right?

Where is the magnitude of the field the strongest?

$$E = -\frac{dV}{dx}$$

What about in higher dimensions

The x and y components of the field at the dot are:

- a) + and +
- b) 0 and +
- c) + and 0
- d) - and +
- e) + and -

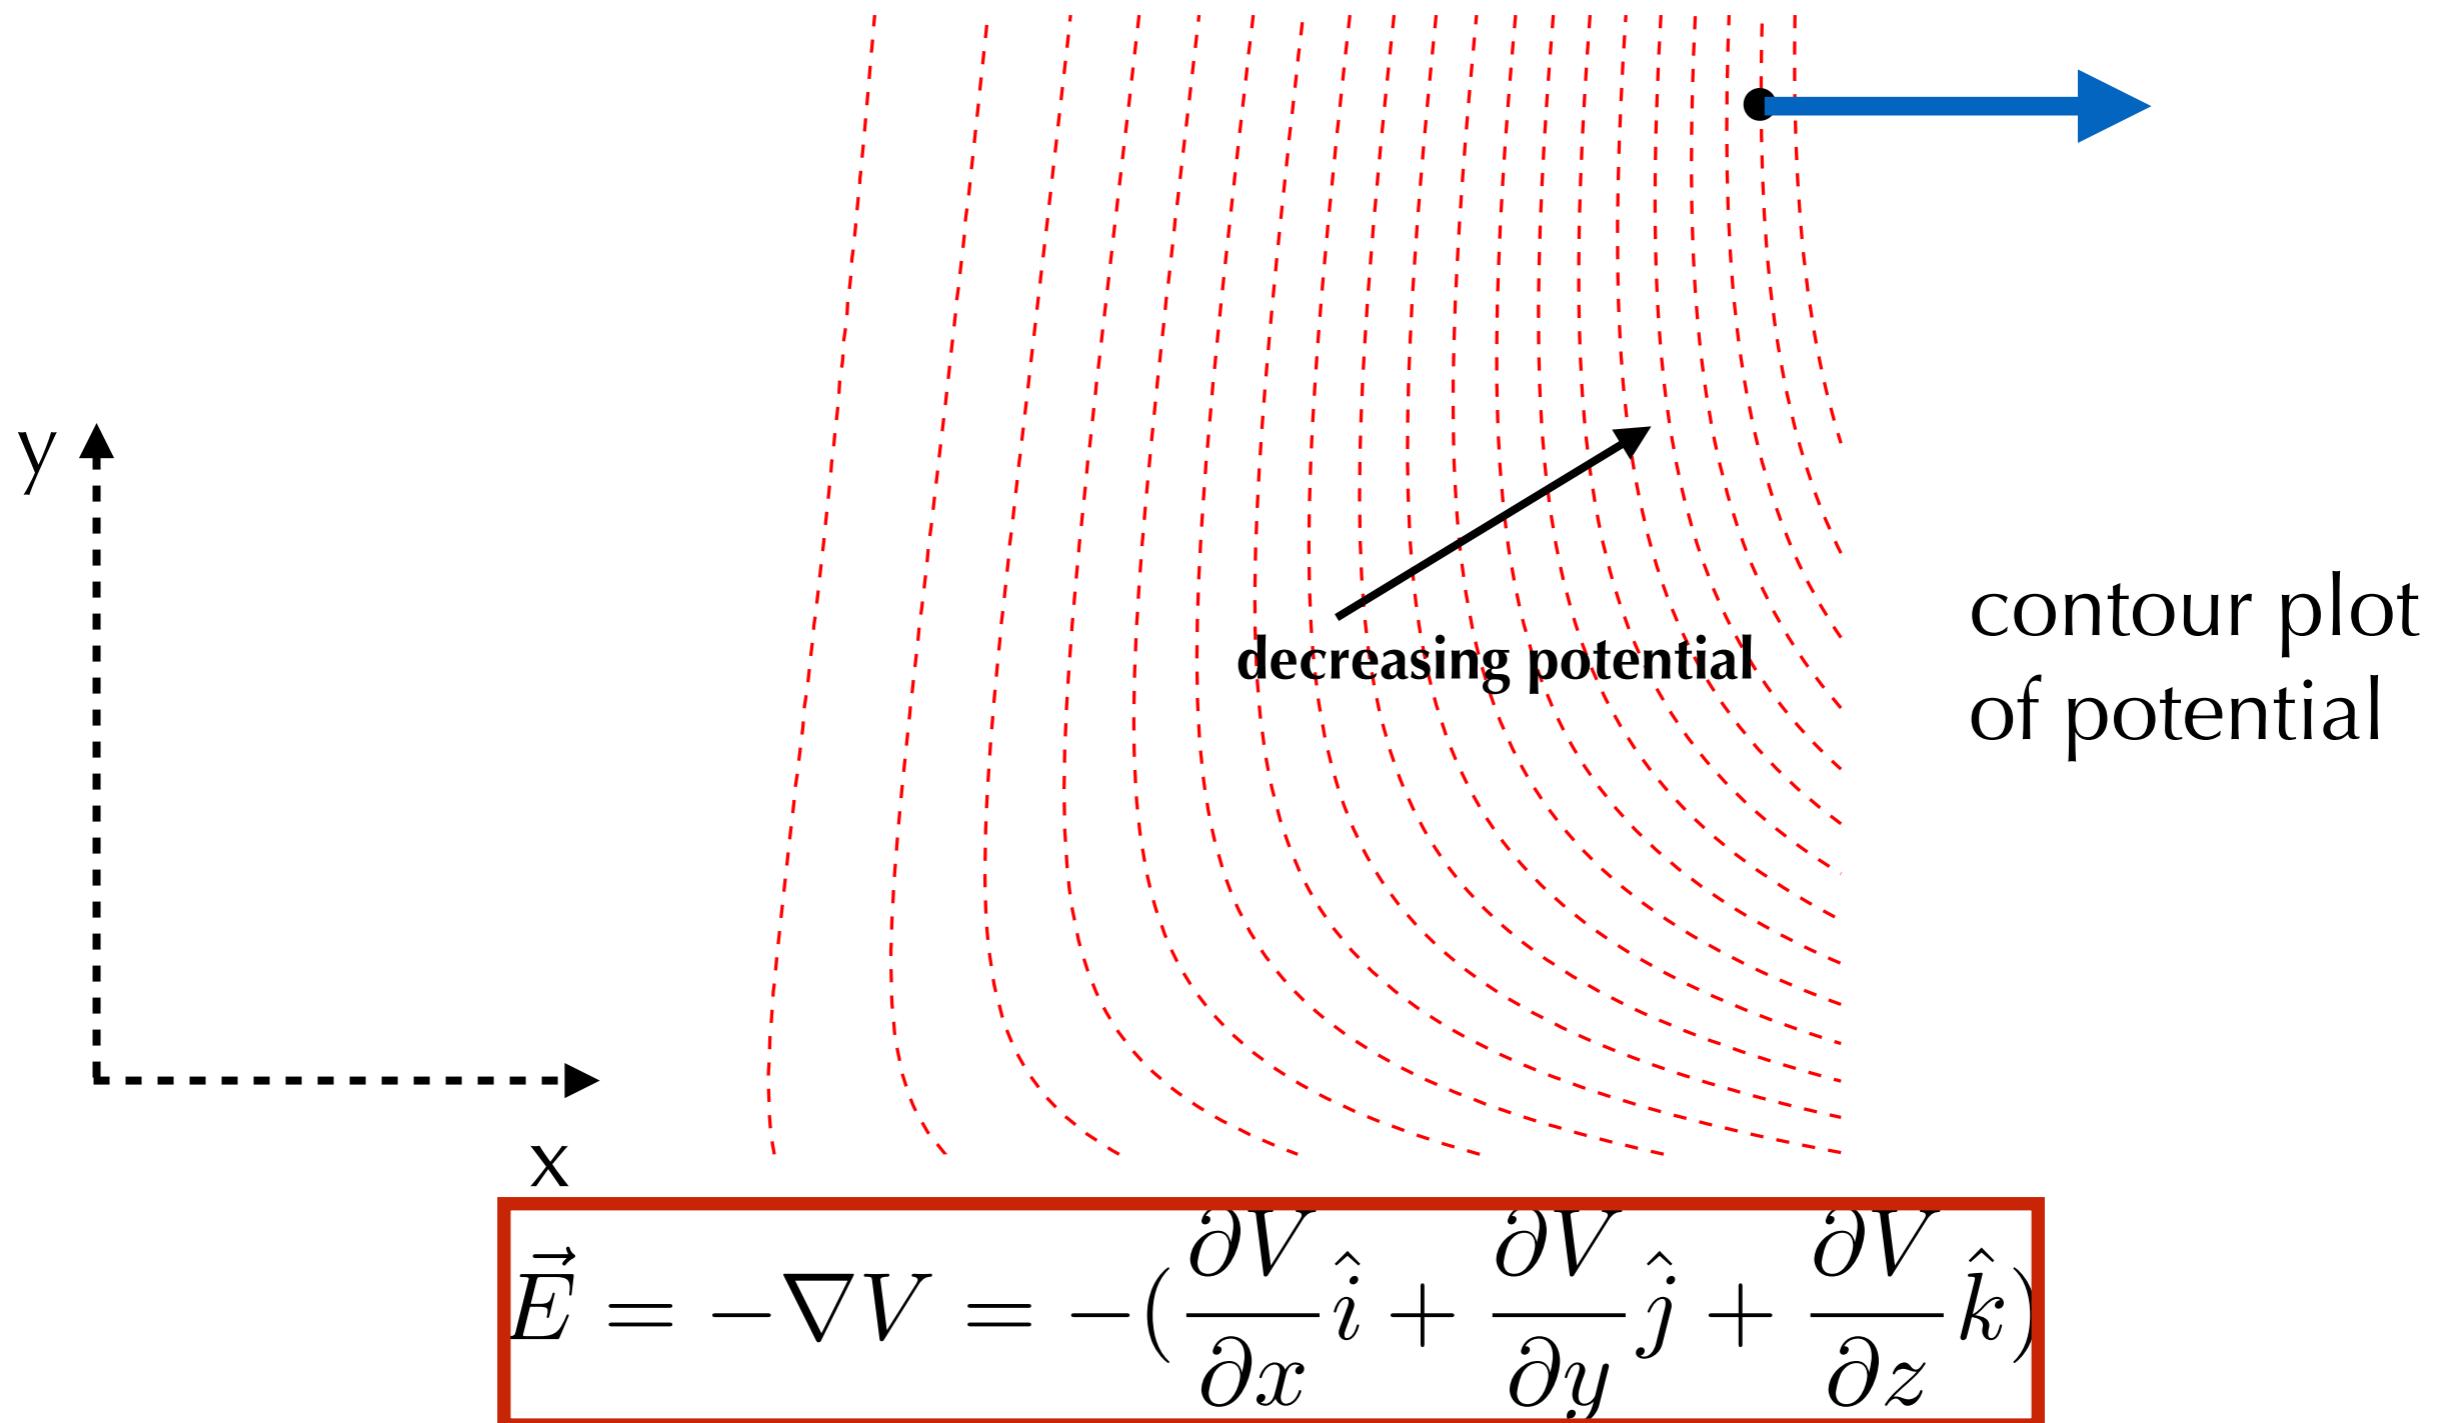

$$\vec{E} = -\nabla V = -\left(\frac{\partial V}{\partial x}\hat{i} + \frac{\partial V}{\partial y}\hat{j} + \frac{\partial V}{\partial z}\hat{k}\right)$$

What about in higher dimensions

The x and y components of the field at the dot are:

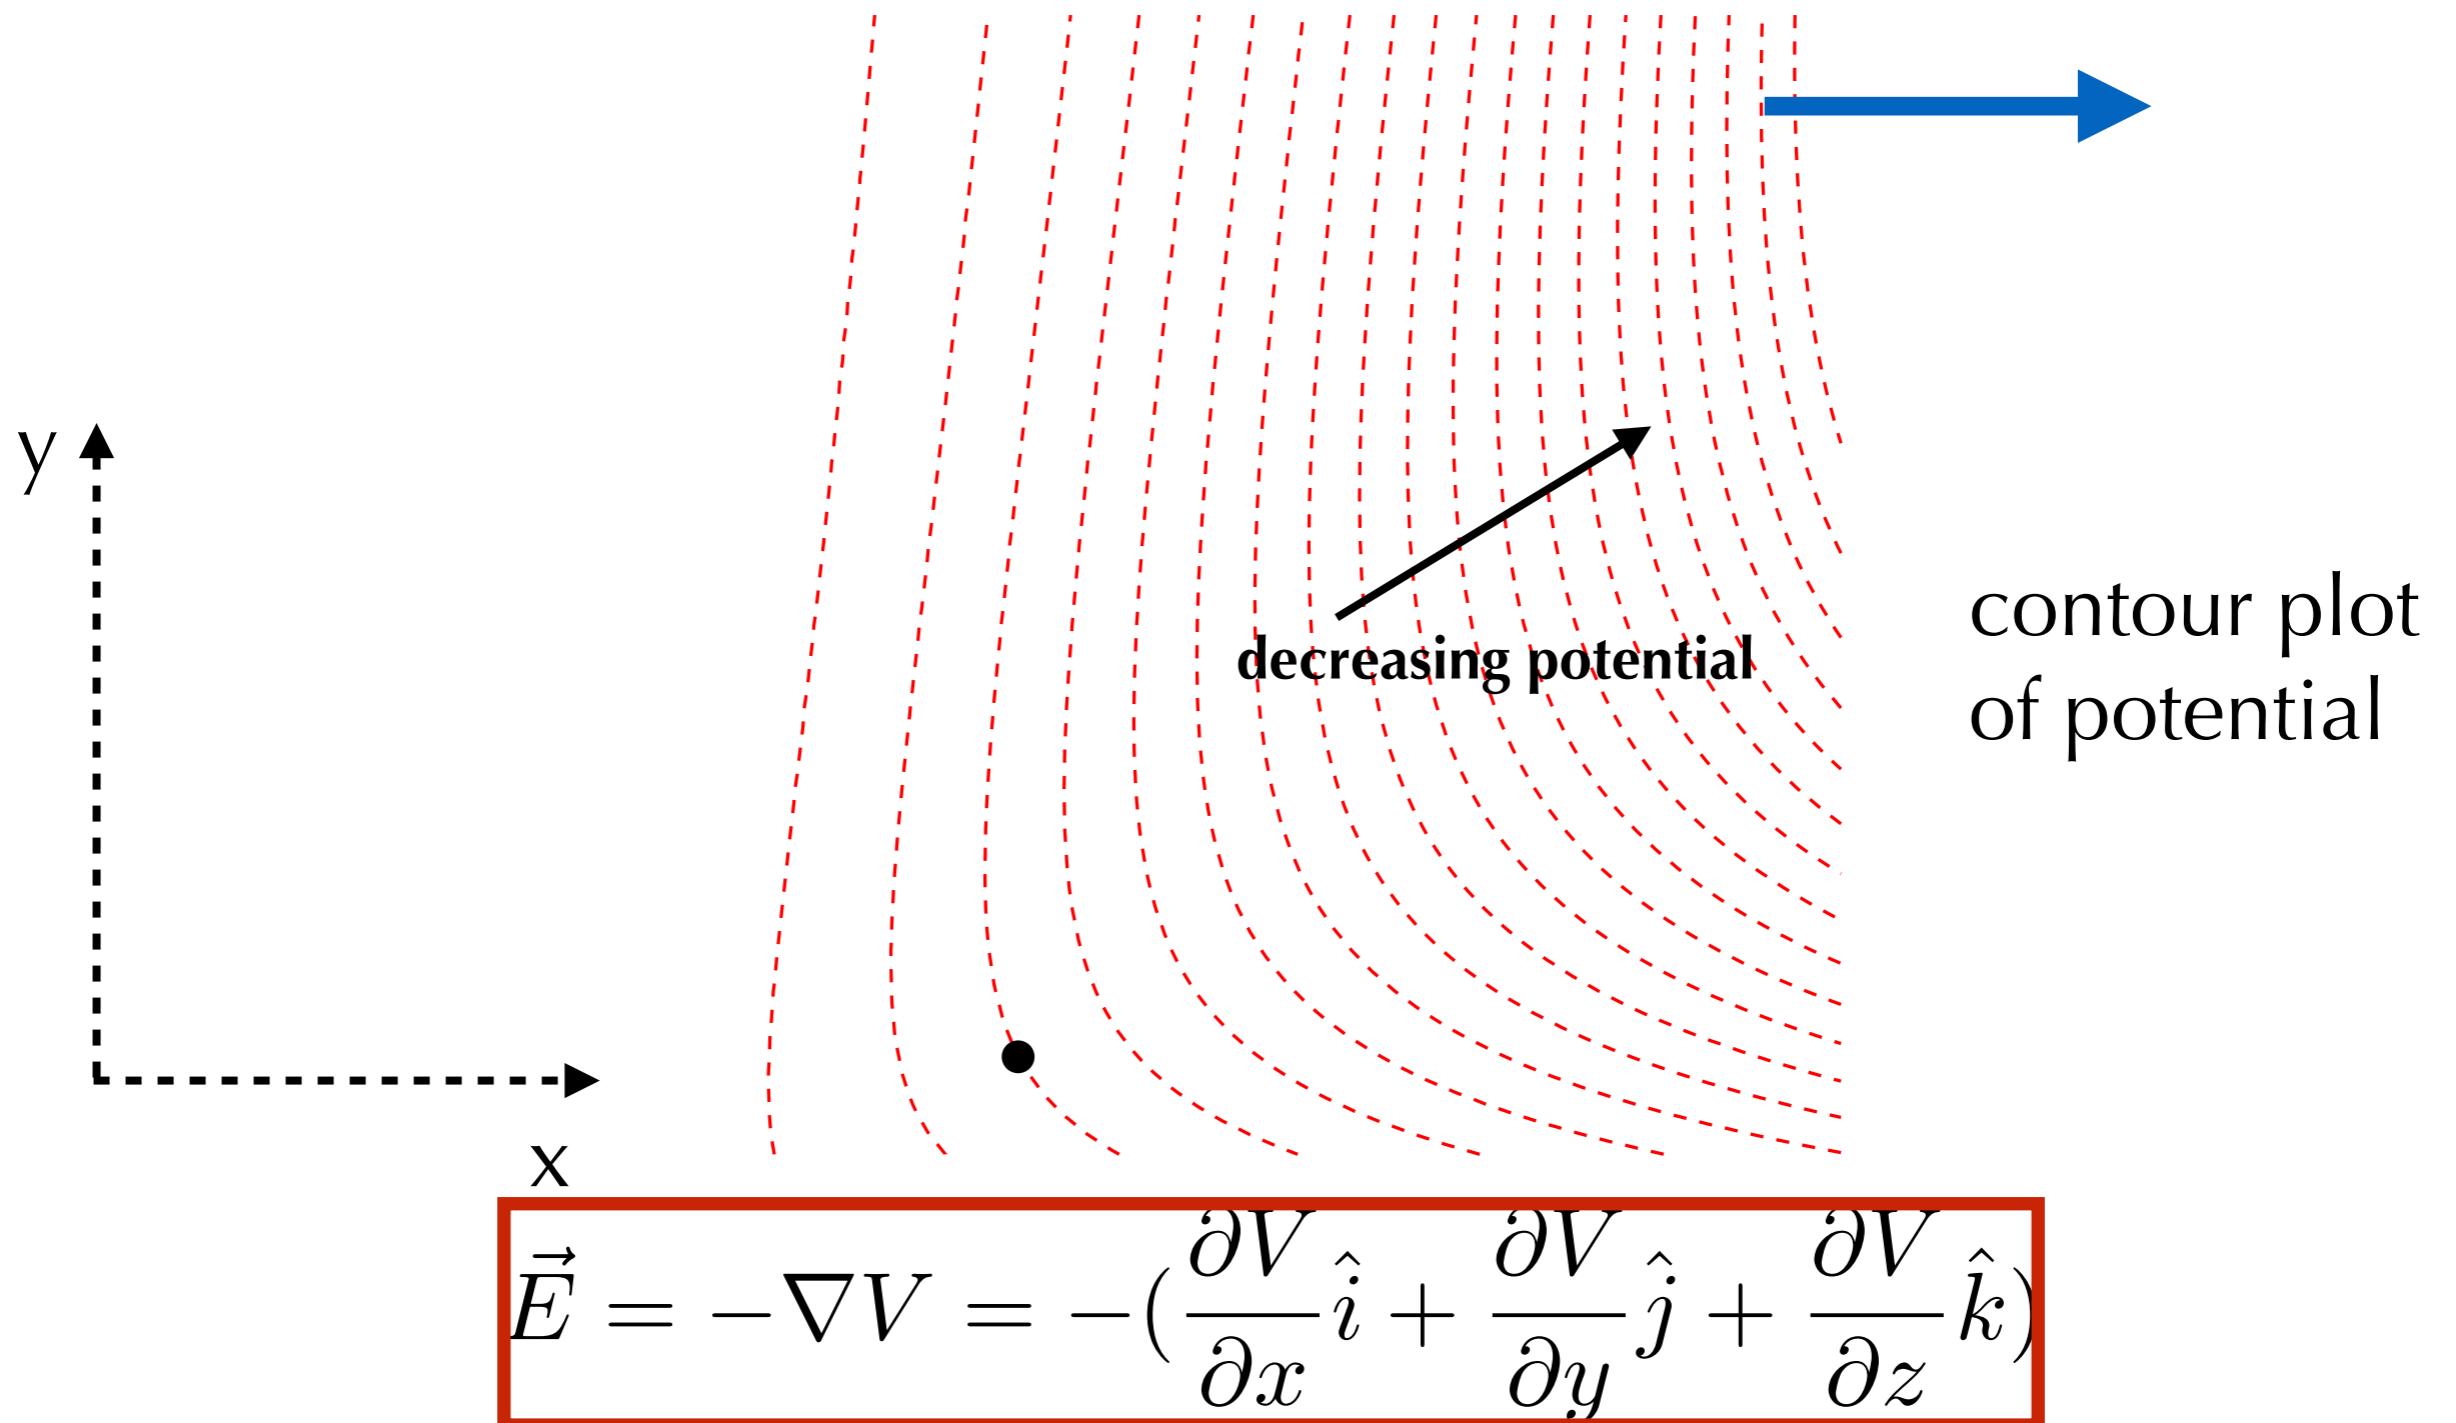

- a) + and + b) 0 and + c) + and 0 d) - and + e) + and -

What about in higher dimensions

The x and y components of the field at the dot are:

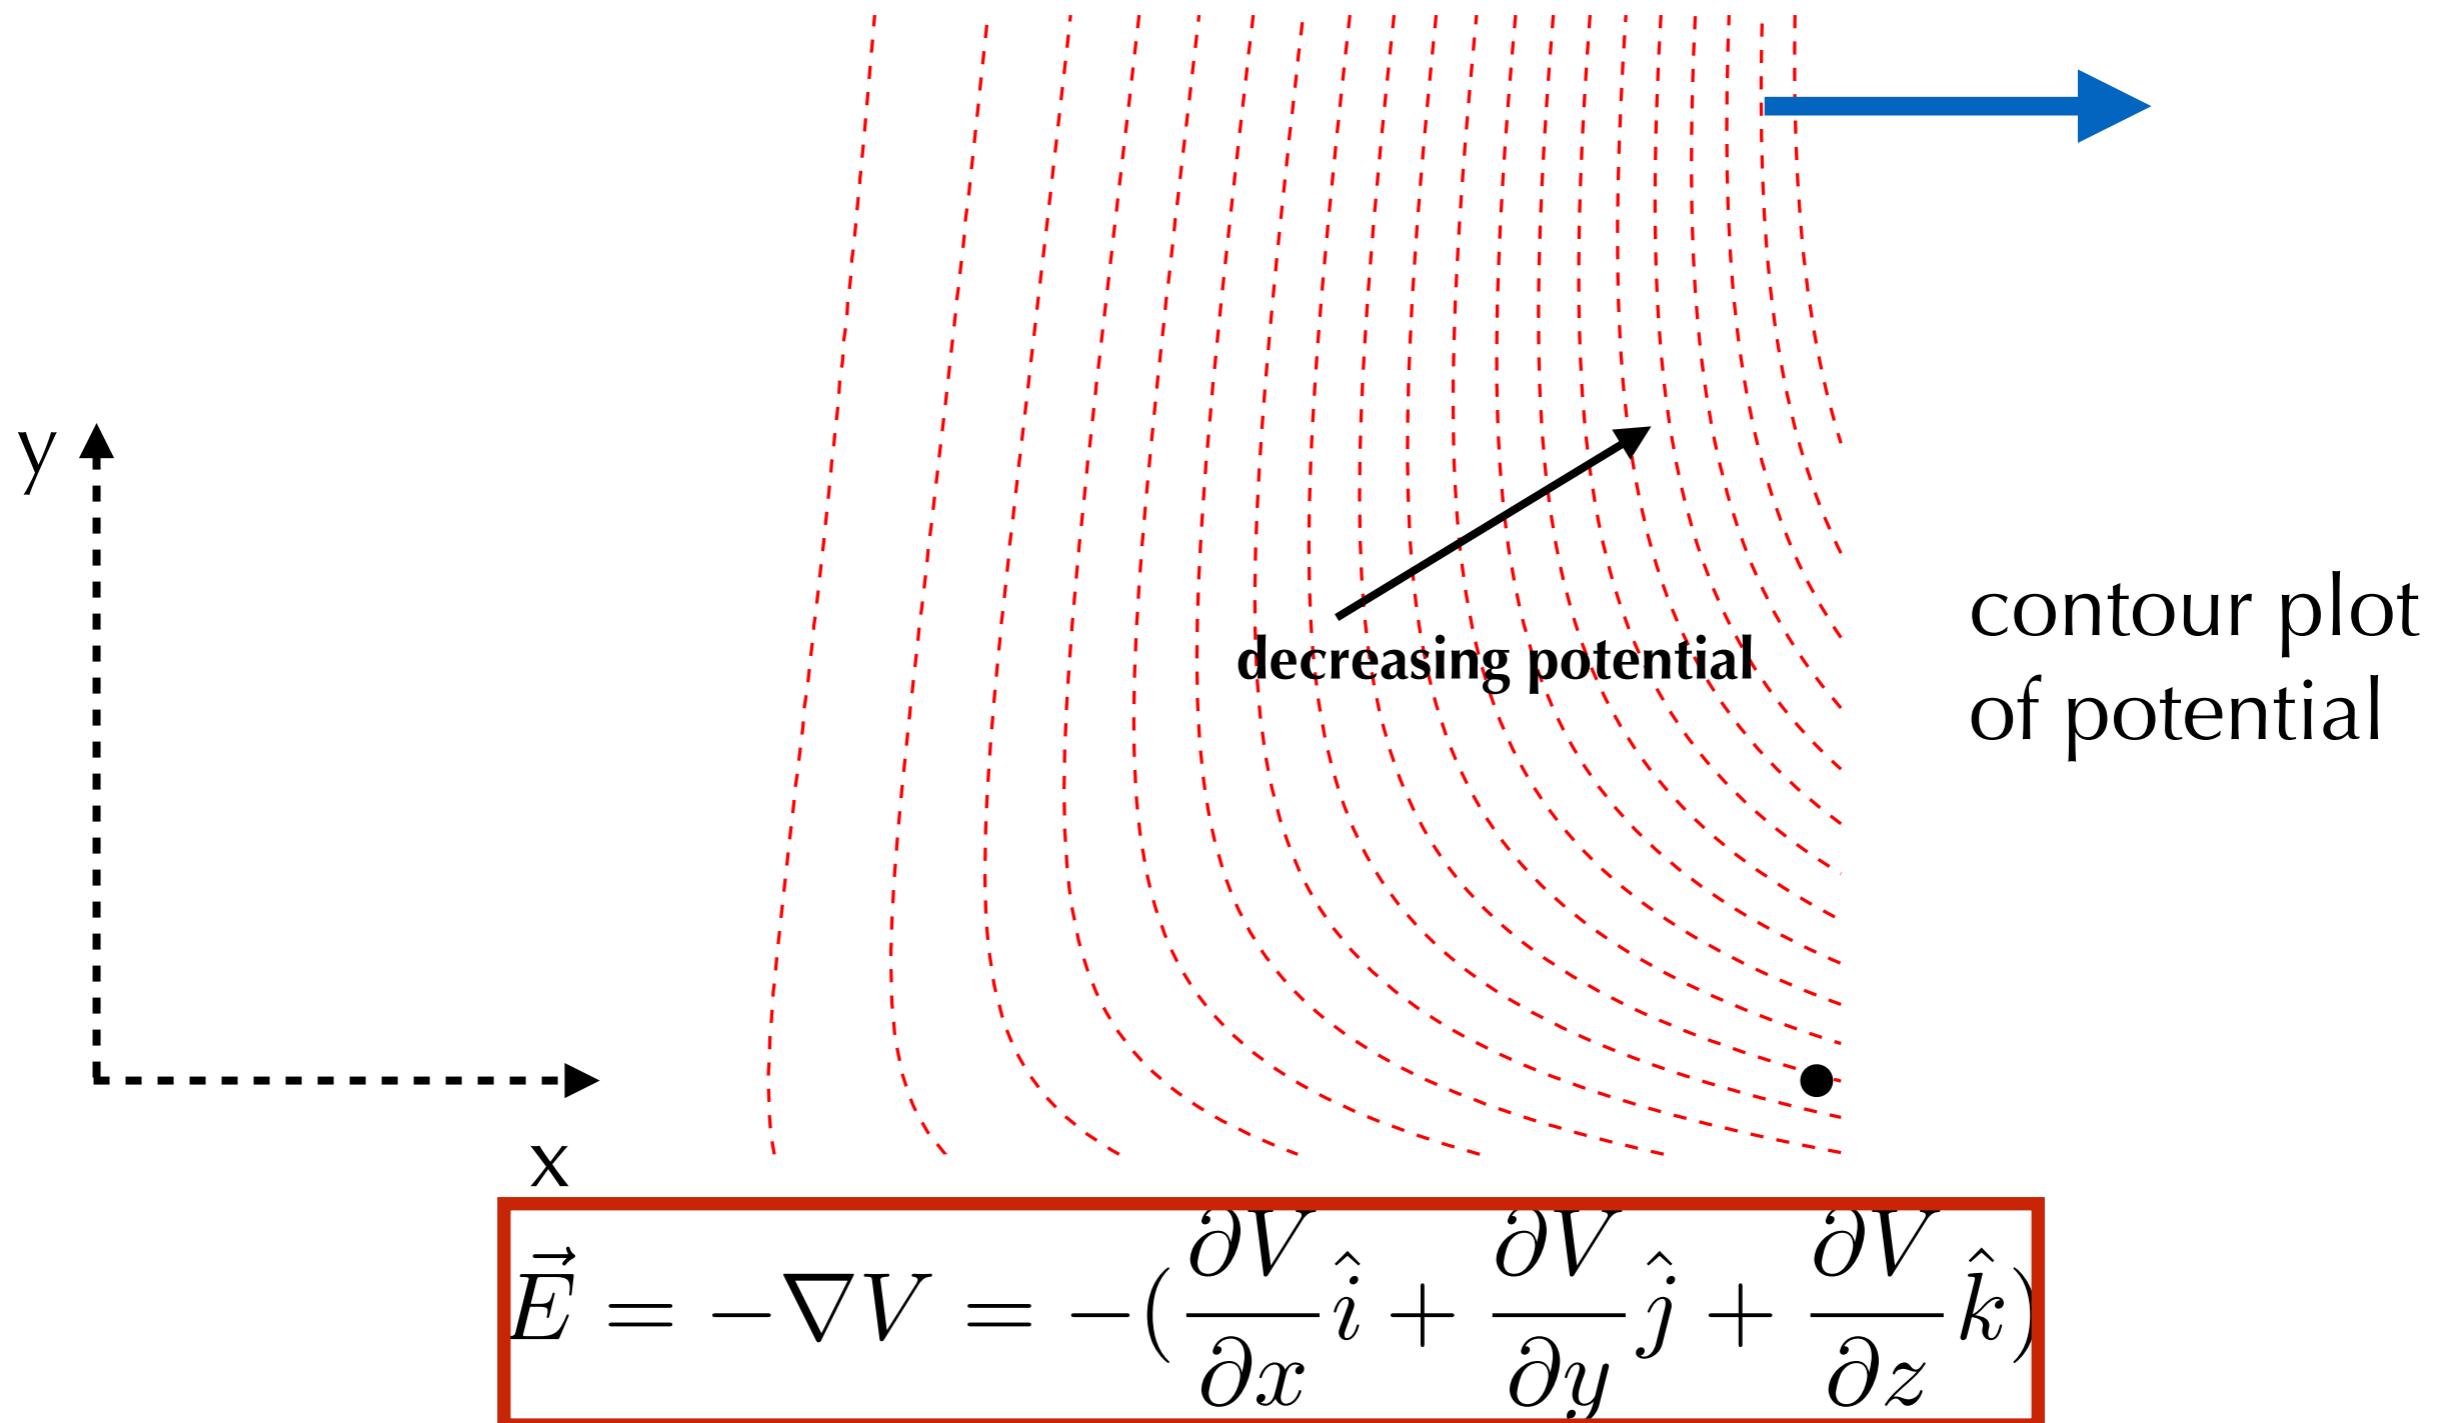

- a) + and + b) 0 and + c) + and 0 d) - and + e) + and -

Find the Electric Field

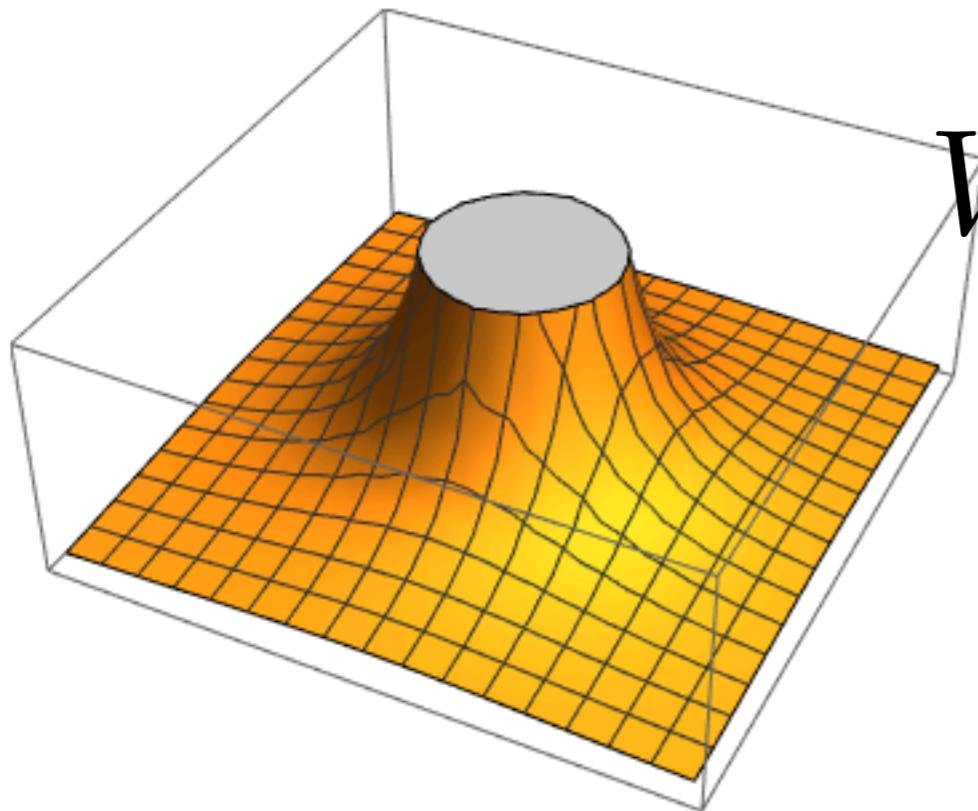

$$V = \frac{5}{x^2 + y^2}$$

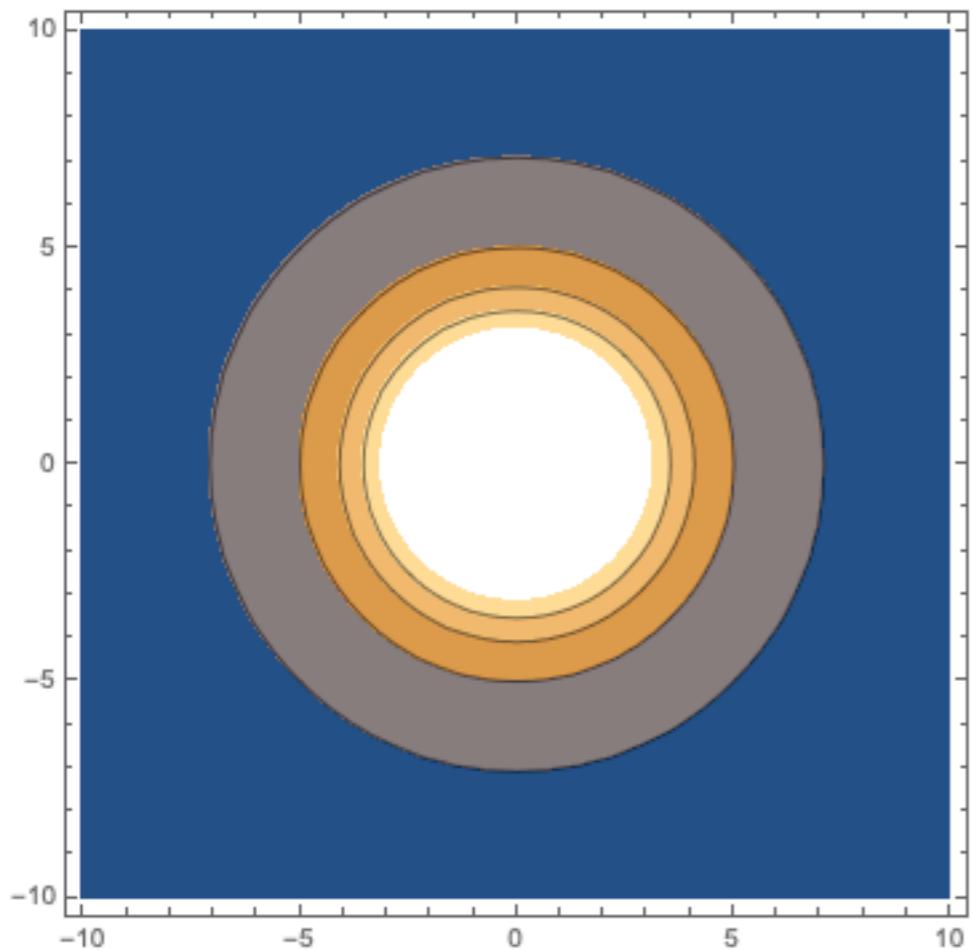

$$\vec{E} = -\nabla V = -\left(\frac{\partial V}{\partial x}\hat{i} + \frac{\partial V}{\partial y}\hat{j} + \frac{\partial V}{\partial z}\hat{k}\right)$$

Find the Electric Field

$$V = \frac{5}{x^2 + y^2}$$

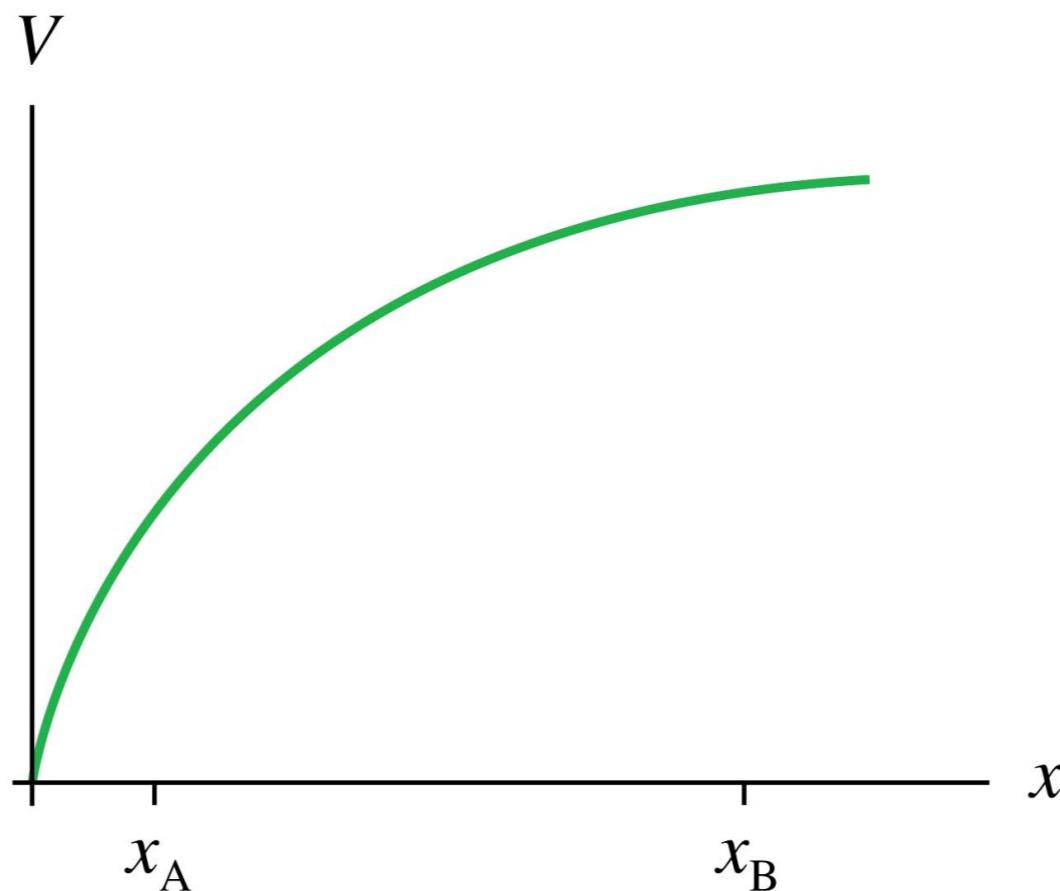

$$\vec{E} = \frac{10}{(x^2 + y^2)^2} (x\hat{i} + y\hat{j})$$

$$\vec{E} = -\nabla V = -\left(\frac{\partial V}{\partial x}\hat{i} + \frac{\partial V}{\partial y}\hat{j} + \frac{\partial V}{\partial z}\hat{k}\right)$$

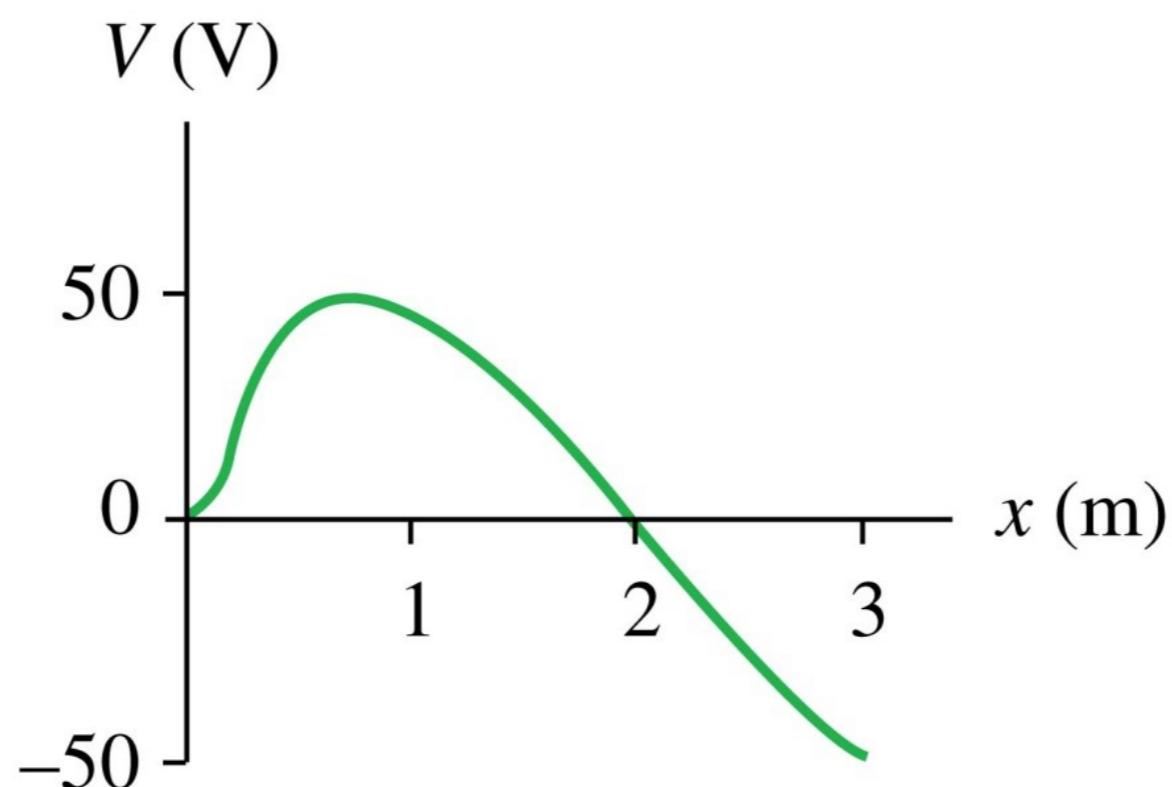

At which point is the electric field stronger?

- A. At x_A .
- B. At x_B .
- C. The field is the same strength at both.
- D. There's not enough information to tell.

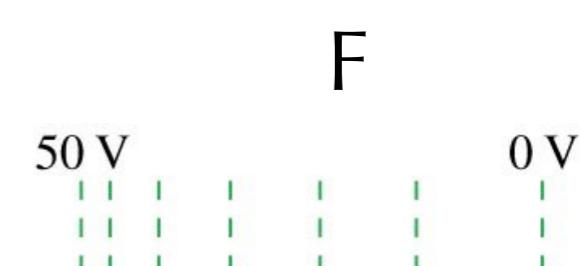

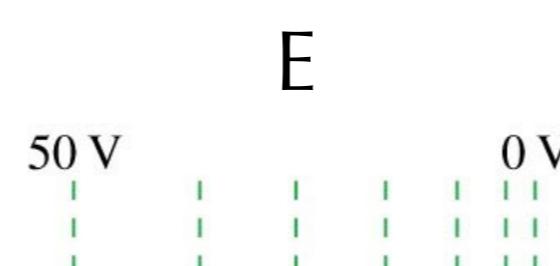

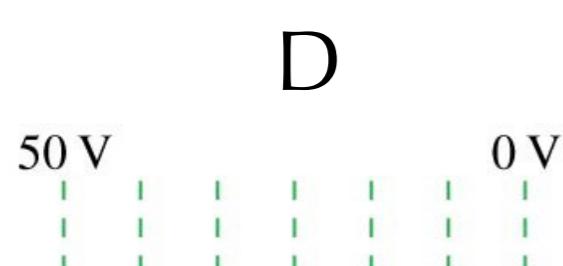

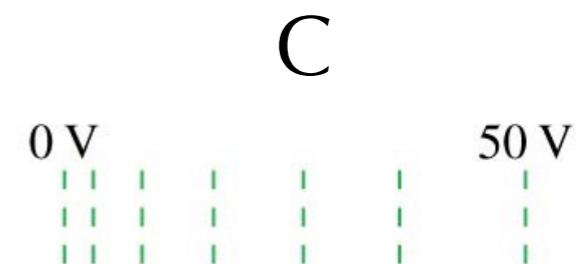

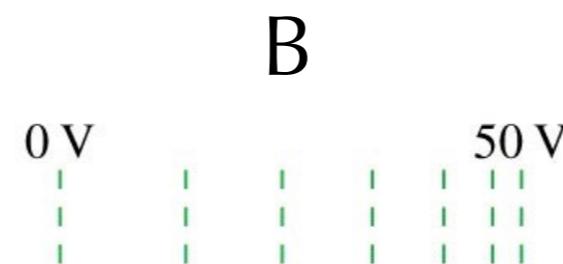

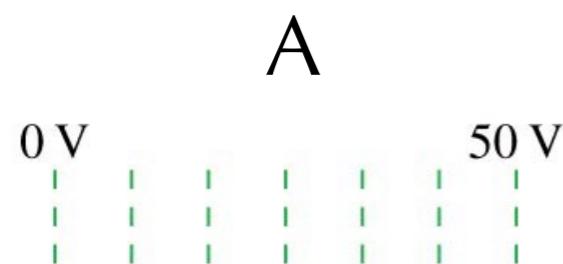

An electron is released from rest at $x = 2$ m in the potential shown. What does the electron do right after being released?

- A. Stay at $x = 2$ m.
- B. Move to the right ($+x$) at steady speed.
- C. Move to the right with increasing speed.
- D. Move to the left with increasing speed.
- E. Move to the left ($-x$) at steady speed.

Which set of equipotential surfaces matches this electric field?

$$E = -\frac{dV}{dx}$$

Which set of equipotential surfaces matches this electric field?

A

B

C

D

E

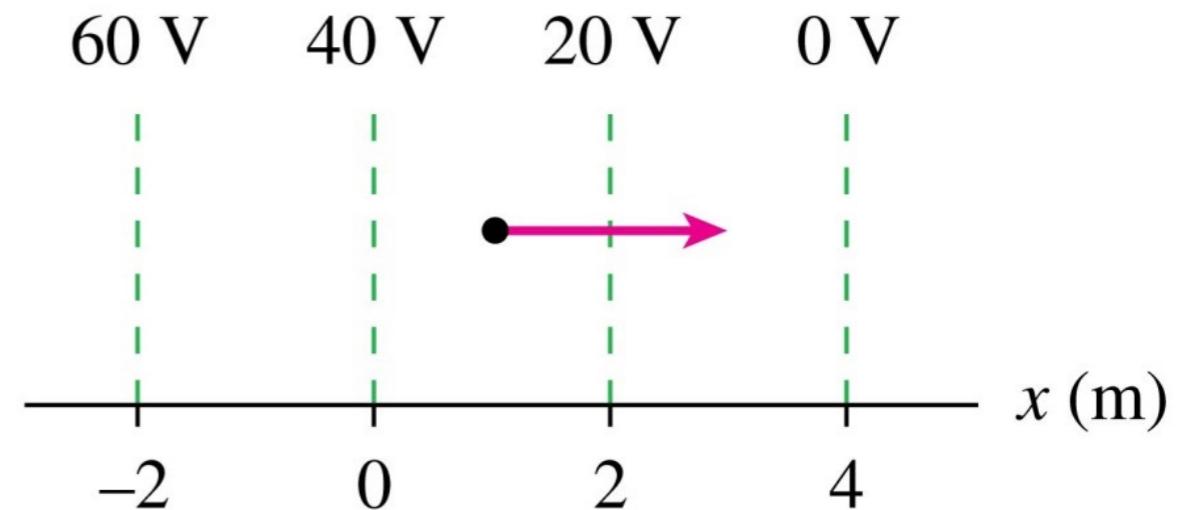

F

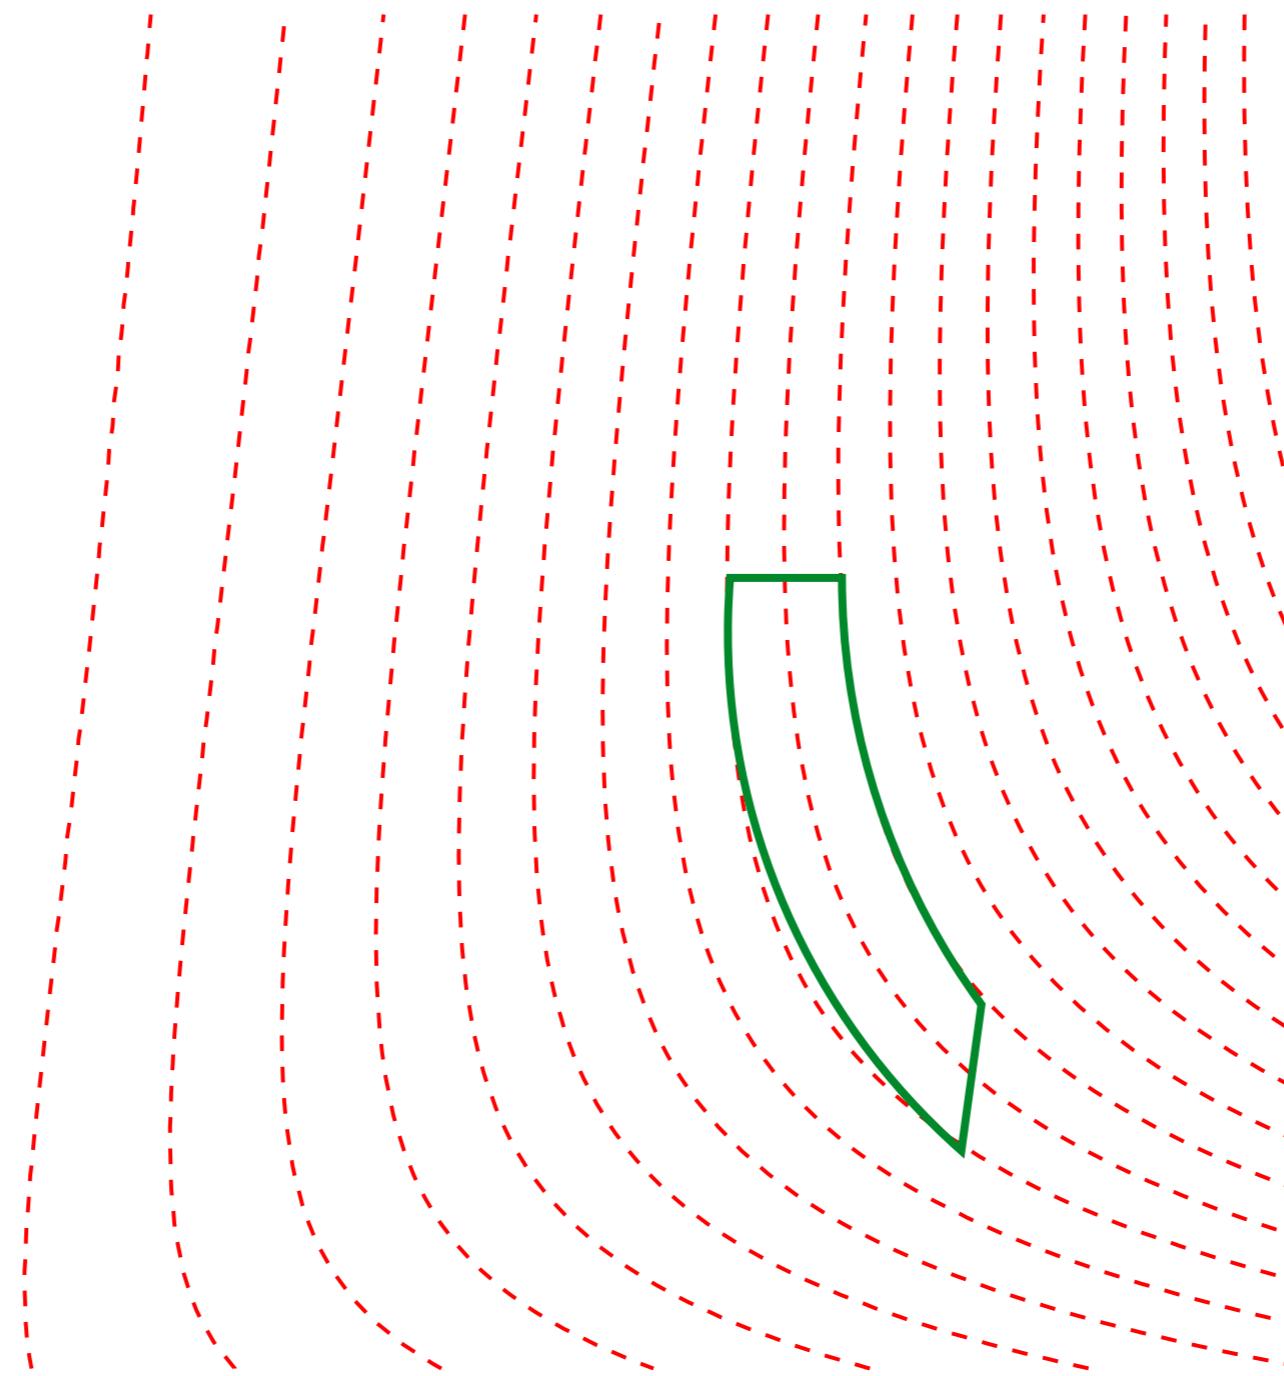

The electric field at the dot is

- A. $20\hat{i}$ V/m.
- B. $-10\hat{i}$ V/m.
- C. $10\hat{i}$ V/m.
- D. $30\hat{i}$ V/m.
- E. $-30\hat{i}$ V/m.

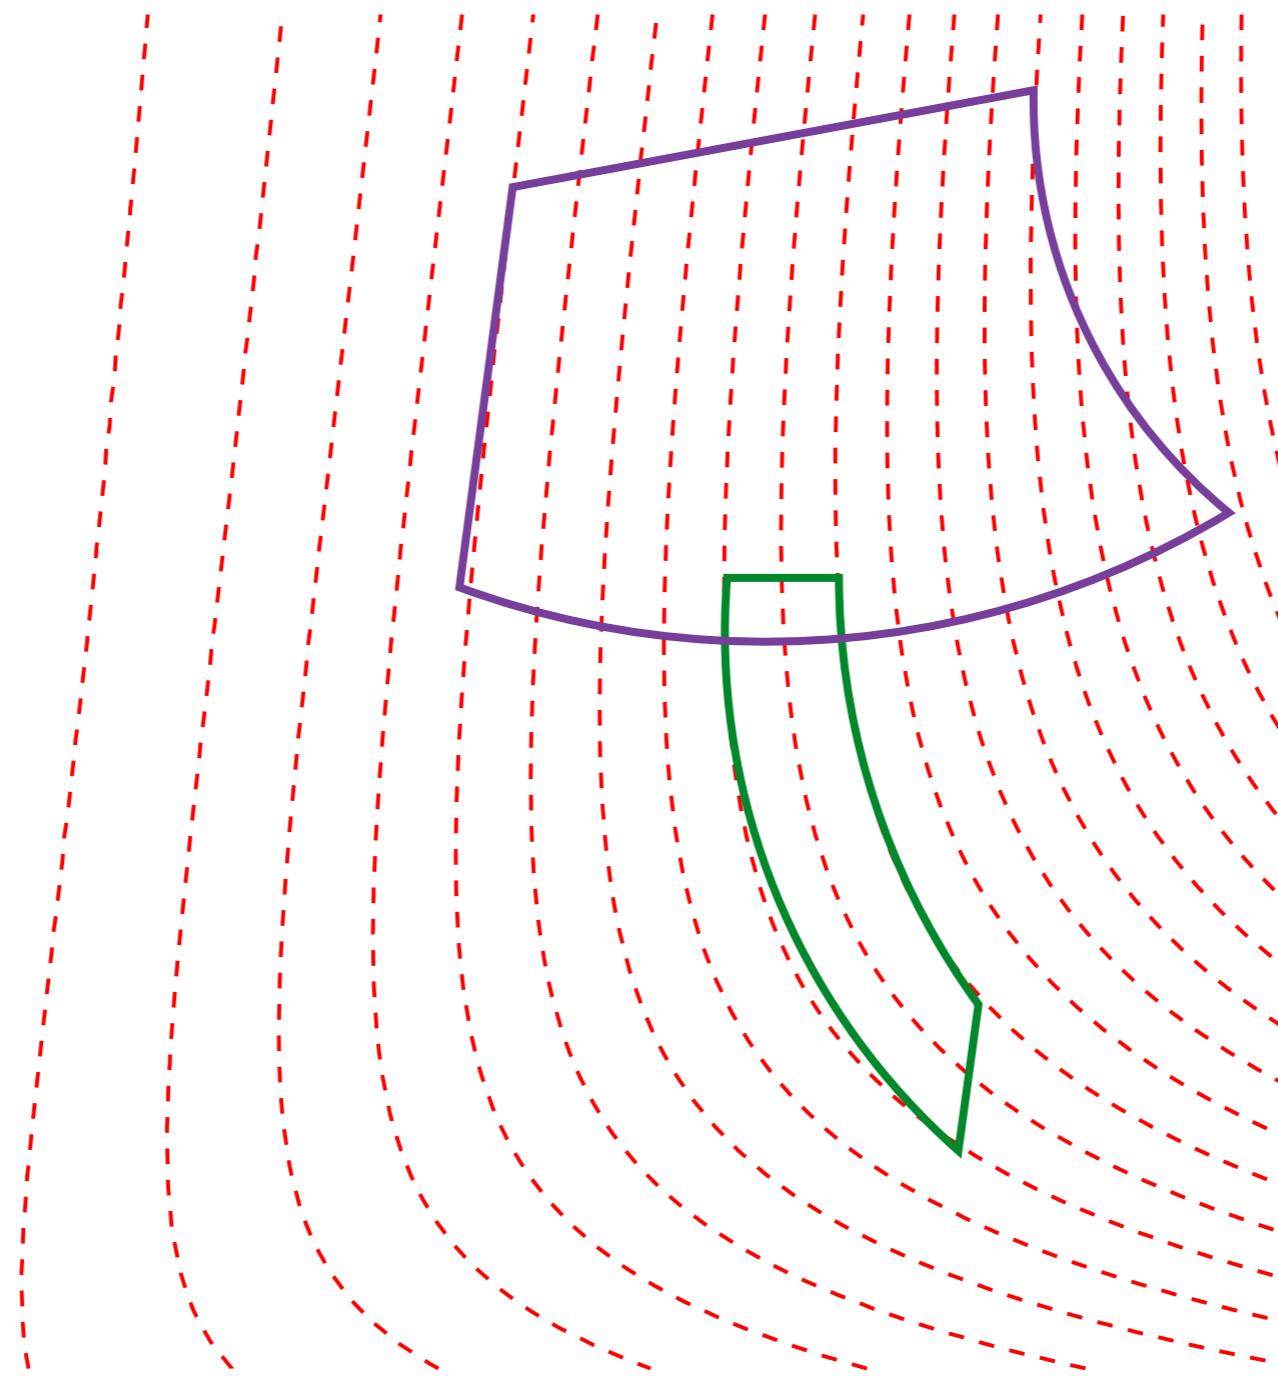

Kirchoff's Loop

What is the potential difference for this closed path?

Kirchoff's Loop

What is the potential difference for this closed path?

A particle follows the trajectory shown from initial position i to final position f . The potential difference ΔV is

- A. 100 V.
- B. 50 V.
- C. 0 V.
- D. -50 V.
- E. -100 V.
